9980. Howard, Roger B. (Colgate U.) **Neurophysiological models of figural aftereffects and visual illusions.** *Psychonomic Monograph Supplements*, 1971, Vol. 4(3), 57-72.—Suggests that most figural aftereffects (FA) and many illusions can be explained by a model based on lateral inhibition and adaptation, provided that at least 2 different levels of the visual system are involved. A review of the 6 models proposed to explain both FAs and illusions indicates that none can explain all 15 phenomena which have been shown to characterize these distortions. In contrast, the model presented can explain the phenomena by assuming that FAs are the result of trace interactions among position detectors at the cortex, and that illusions result from similar interactions among size detectors at a different level of the cortex. The neurophysiological data indicate that further extension of the model will eventually be necessary to explain distortions in other stimulus attributes such as orientation and angularity (50 ref.)—*Journal abstract*.

9981. Massaro, Dominic W. & Anderson, Norman H. (U. Wisconsin) **Judgmental model of the Ebbinghaus illusion.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 147-151.—Studied the Ebbinghaus illusion as a function of 4 stimulus variables: (a) the size of the context circles, (b) the number of context circles, (c) the distance between the context circles and the center circle, and (d) the size of the center circle. Results with 34 Ss provide a quantitative test of a judgmental model that considers the Ebbinghaus illusion to be comparative in nature: the context circles serve as standards, and the center circle is judged partly relative to them. The model provided a reasonably good description of the magnitude of the illusion as a function of the several stimulus variables. (15 ref.)—*Journal abstract*.

9983. Pressey, A. W. & Moro, T. L. (U. Manitoba, Winnipeg, Canada) **An explanation of Cooper and Runyon's results on the Mueller-Lyer illusion.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 564-566.—Presents evidence that a solid line is overestimated as compared to an empty space. On this basis it is argued that M. R. Cooper and R. P. Runyon's data (see PA, Vol. 45:5312) on the Müller-Lyer illusion is confounded by a filled-space illusion and that their results do not lead to any conclusions about the Müller-Lyer illusion per se.—*Journal abstract*.

9984. Wagner, Kathleen & Avant, Lloyd L. (Iowa State U.) **Anchoring stimuli and Titchener's Technical Note.** *U.S. Army Human Engineering Laboratories Technical Note*, 1970(Jul), No. 7-70, 5 p.—In a series of Titchener illusion figures, 10 female undergraduate controls were asked to report the larger, center or surrounding circles when the ratio of surrounding to center circle diameter varied, in .05 steps, from .75 to 1.25 across series members. 2 groups of 10 female undergraduates each judged these series members, alternated with a stimulus configuration in which the ratio of diameters was either .20 or 1.80. In both groups, shifts in center surrounding circle PSE and changes in judgments of series members were consistent with predictions drawn from the pooling model of adaptation level theory. *Journal abstract*.

Time

9985. **Balducci, Domenick.** (New York U.) **Cognition, personal tempo, and subjective passage of time.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6868.

9986. **Bratfisch, Oswald.** (U. Stockholm) **Time-estimations of the main activities of university students.** *Reports from the Institute of Applied Psychology, U. Stockholm*, 1970, No. 2, 9 p. —On each day of 1 wk. a group of 32 university mathematics students received a questionnaire and reported what kind of activities they were occupied with the day before and to express, in min., how much time they had spent on each. In another part of the investigation the same Ss were instructed to estimate the relation between main activities, sampled from the questionnaire, regarding the time they devoted to the various activities on the average. When relating these 2 kinds of time-measures-answers to the questionnaire (objective and subjective data), it was found that Ss overestimated certain activities while they underestimated other ones, i.e., periods of rest and sleep as well as time spent on amusement activities were underestimated while the time devoted to studies was strikingly overestimated. A possible application of time-measures of this kind in applied psychology is discussed. (32 ref.)—*Journal abstract*.

9988. **Meerlo, Joost A.** **Along the fourth dimension: Man's sense of time and history.** New York, N.Y.: John Day, 1970. x, 278 p. \$8.95.—Discusses the complexities of the many "times" running through human life: the biological clock, and clinical, gnostic, and other kinds of time. An important feature of the study shows how derangements of different time senses can cause aberrations in man's behavior and how, if man changes his way of life, his senses of time change accordingly.

VISION

9989. **Adams, Anthony J., Kapash, Richard J., & Barkan, Eric.** (U. California, School of Optometry, Berkeley) **Visual performance and optical properties of Fresnel membrane prisms: I. Distortion.** *American Journal of Optometry & Archives of American Academy of Optometry*, 1971(Apr), Vol. 48(4), 289-297.—Describes the Fresnel prism, an outgrowth of the early 19th century lenses designed for lighthouses by A. J. Fresnel, as a series of small prisms lying adjacent to each other on a thin transparent platform. Ophthalmic quality Fresnel prisms of almost any power have recently been made of flexible material (less than 1 mm. thick) which can be pressed onto existing prescription lenses. A comparison of membrane Fresnel and conventional prisms is made in terms of design variables available for each in optimizing prism performance.—*Journal abstract*.

9990. **Gestrin, Phyllis J.** (U. Washington) **Changes of temporal summation during light and dark adaptation.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6288.

9991. **Hardt, Martha E., Held, Richard, & Steinbach, Martin J.** (Massachusetts Inst. of Technology) **Adap-**

tation to displaced vision: A change in the central control of sensorimotor coordination. *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 229-239.—Examines the changes that occur in sensorimotor coordination after viewing the prism-displaced image of the hand. 4 types of explanation for the changes are advanced: (a) visual, (b) proprioceptive, (c) motor, and (d) sensorimotor. Each predicts different consequences on different tests of coordination; i.e., reaching for visual targets, orienting head to hand, orienting eye to hand, and repositioning the hand in a learned posture. The results of 4 experiments with a total of 32 undergraduates and college employees were consistent only with the sensorimotor explanation. Findings suggest a change in the control and assessment of coincidence between the direction indicated by the exposed arm and that of either a sensed external object or other body part. (24 ref.)—*Journal abstract*.

9992. **Ohlbaum, Morton K., O'Brian, Charles R., & Van Patten, Robert E.** (Wright-Patterson Air Force Base 6570th Aerospace Medical Research Lab., O.) **The effect of viewing distance on the visual decrements associated with Gz vibration.** *American Journal of Optometry & Archives of American Academy of Optometry*, 1971(Apr), Vol. 48(4), 298-306.—Discusses degradations of visual performance in vibration environments. The mechanisms involved in the response are poorly understood and limited quantitative data is available. Binocular visual acuity was measured on 28 male 21-42 yr. old volunteers at .4, 1 and 4 m. during vibration exposures from 5-50 Hz., at $\pm .75$ Gz. Viewing distance-dependent variations in acuity suggest that a form of visual tracking may occur at frequencies above 3 Hz. provided that the angular displacement is small.—*Journal abstract*.

9993. **Perkins, Richard B.** (307 Talbot St., St. Thomas Ontario, Canada) **Clinical measurement of the physiologic position of rest of the crystalline lens.** *American Journal of Optometry & Archives of American Academy of Optometry*, 1971(Apr), Vol. 48(4), 343-350.—The position of physiologic rest of the crystalline lens is the accommodative state which it assumes when all the stimuli to accommodation have been eliminated except the basal innervations. A study with 30 12-39 yr. old patients is described using a clinical method which measured this position with considerable precision. The physiologic and clinical implications are discussed. The test evaluates and/or prescribes minus spherical additions for a patient's night driving needs.—*Journal abstract*.

Perception

9995. **Anderson, Robert H. & Deffenbacher, Kenneth A.** (U. Nebraska, Omaha) **Effect of sound stimulation on visual afterimages.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 343-346.—Attempted to confirm and extend the Soviet findings concerning the effects of sound frequency and intensity on reported size and brightness of Purkinje afterimages. The structure and operation of a device which provides reliable measurement of changes in the apparent size and brightness

of achromatic negative afterimages are described. Utilizing this device, 2 experiments with 40 undergraduates in each, were conducted to assess the effects of pure tone intensity and frequency on reported size and brightness of afterimages. Intense sound stimulation produced very pronounced increases in afterimage size and brightness. Results are discussed in light of previous Soviet findings.—*Journal abstract.*

9996. Begelman, D. A. & Steinfeld, G. J. (Fairfield Hills Hosp., Newtown, Conn.) **Retinal vs. phenomenal determinants of the horizontal-vertical illusion.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 77-85.—Attempted to ascertain whether the retinal or phenomenal determinant is the crucial factor in the horizontal-vertical illusion. To control for the effects of body tilt and stimulus equivalence, the phenomenal and retinal sizes of 2 stimulus arrays were systematically varied ($N = 32$ Ss). Analyses of the Length \times Distance interaction supported the retinal hypothesis. When stimuli were phenomenally equal but retinally unequal, illusion scores differed significantly. In the reverse condition, no significant difference between illusion scores was obtained. It is concluded that the horizontal-vertical illusion is affected predominantly by the retinal factor. Although the illusion is a case of visual anisotropy, its explanation is still uncertain. (18 ref.)—*Author abstract.*

9998. Eriksen, Charles W. & Eriksen, Barbara A. (U. Illinois) **Visual perceptual processing rates and backward and forward masking.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 306-313.—Presented 3 different stimuli successively to the same foveal location. In Exp. I with 11 undergraduates and an 11-yr-old girl, the effect of varying dark intervals between the 3 constant-duration stimuli was compared to varying the durations of immediately successive stimuli. Forward and backward masking interactions revealed integration of the stimuli rather than an erasure process. Evidence for a processing rate in the neighborhood of 200 msec. was obtained. In Exp. II with 4 undergraduates, some of the stimuli were filtered in order to make comparisons between the 2 conditions with stimulus energy held constant. Time-intensity reciprocity was found out to 100-msec stimulus duration with equal energy giving highly similar performance levels for the compared conditions. (17 ref.)—*Journal abstract.*

9999. Farley, Frank H. & Severson, Herbert H. (U. Wisconsin, Research & Development Center for Cognitive Learning) **The stability of individual differences in strength and sensitivity of the nervous system.** *Educational & Psychological Measurement*, 1971(Sum), Vol. 31(2), 453-459.—15 Ss were dark adapted wearing red lucite goggles in a semidark sound-reduced room. Thresholds were obtained with an NDRC Model III adaptometer. Ss were told to fixate upon the red fixation cross. An auditory cue was given following which the main visual cue below the fixation point would be presented, to which S would respond "yes" or "no." In 2nd phase of the study the focus was on the modified shape of the curve index. The procedure took 15 min. To estimate stability of the effect, Ss were run 1 mo later. The stability coefficient for the absolute visual threshold

was .91; for the modified shape of the curve, .61.—*N. M. Chansky.*

10002. Organt, Gerald J. (Montgomery County Public Schools, Supporting Services Div., Rockville, Md.) **Effect of m value on visual search.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 90(1), 174.—Investigated the effect of differential searchfulness (m) on stimulus discriminability by search methods. 64 male undergraduates located a target word embedded in a single-spaced column of 4 lists in each of the 4 possible combinations of high- and low-m value of the target and field items with the target word at a different predesignated position in each of the 4 lists. Analysis of variance for repeated measures indicated Scheffe's method of multiple comparisons that mean search time was significantly longer for high-field items than for low-field items. Results support the hypothesis that m value, does affect stimulus discriminability in a search task.—*Journal abstract.*

10003. Pachella, Robert L. **The nature of the effect of set on tachistoscopic recognition.** *Human Engineering Laboratory Report*, 1970(Aug), No. 21, 20-29 p.

which Ss decided whether or not a picture of a common object was presented or an alternative. The alternative was presented either before or after the stimulus exposure. In Exp. I, 10 enlisted men (the alternative was presented before the stimulus) and 10 enlisted men (the alternative was presented after the stimulus) were shown a picture of a common object with a picture aftereffect. Results indicated that Ss receiving the picture before the alternative were more sensitive to the picture than Ss receiving the picture after the alternative. When the alternative was presented before the picture, however, the results indicated that the picture resulted in a significant improvement in performance. No change in sensitivity to the picture was observed when men were shown a picture of a common object and each 24 hr picture of a common object. No significant differences were found between the 2 groups of alternatives. Results indicate that the nature of the effect of set on tachistoscopic recognition is dependent upon the timing of the alternative relative to the stimulus.

Ss in the name-after condition performed as well as the Ss in the picture-after condition. The nature of the effect of set on tachistoscopic recognition is dependent upon the timing of the alternative relative to the stimulus.

10006. Taysi, O. P. (Indian Inst. of Technology, Kanpur) **Visual processing schema: A theory of perception.** *Journal of General Psychology* (Jul), Vol. 85(1), 3-28.—Advances a theory stating that inputs from the retinal image sources together with a set of inputs obtained from the retinal shift in the retinal image with a fluttering motion of the eye constitute the basis of visual perception. These 2 sets of inputs generate a processed image as a progressed version of the retinal image and a processed version of external reality in a 3-dimensional perspective. Functional relations between the parameters of the processed image and those of proximal and distal stimuli are proposed. The implications of these formulations were examined for perception of size, form, distance, depth in geometric figures, and for peripheral vision. An analogous model capable of generating a processed image in accordance with the theory is also suggested. (26 ref.)—*Author abstract.*

10008. Wilkinson, D. Adrian. (Addiction Research Foundation, Toronto, Ontario, Canada) **Visual-motor control loop: A linear system?** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 250-257.—Conducted 2 experiments to test a model of prism adaptation which suggests that the visual-motor control loop is a linear system comprising a number of independent subsystems, and that errors in the subsystems sum algebraically to produce the error of the total loop. Results with 12 and 8 undergraduates and graduates indicate that exposure to visual-motor discordance produced by wedge prisms caused a change in the judged visual direction (V) of targets and in setting the hand to the median plane of the head (H). The prism-induced change in target-aiming performance (T) was equal to $(H + V)$. Viewing a visual display through the prisms produced changes in V and H, but the data did not fit the linear model $(H + V = T)$. Changes in pointing at visual targets with the untrained arm were fully accounted for by changes in V. (18 ref.)—*Journal abstract.*

Size & Distance & Depth Perception

10009. Baird, John C. (Ed.) (Dartmouth Coll.) **Human space perception: Proceedings of the Dartmouth conference.** *Psychonomic Monograph Supplements*, 1970, Vol. 3(13), 137-219.—Presents topics delivered by 8 researchers on human space perception at the 1969 Dartmouth conference. Research on problems of size, distance, shape, movement, and depth perception are discussed. Recent research and the emergence of limited theoretical models are noted. (5 p. ref.)—*P. Hertzberg.*

Irrelevant dimensions in three shape recognition tasks. *British Journal of Psychology*, 1971(May), Vol. 62(2), 151-156. —Examined 3 shape recognition tasks in an experiment with 6 male undergraduates: (a) matching 2 shapes, (b) matching a written name to a shape, and (c) naming shapes orally. In each the relevant dimension was shape, but the irrelevant dimensions of color, orientation, and proportion were varied. The effect of changes in the irrelevant dimensions in each task was used to infer the degree of specificity present in the internalized standard against which the test stimulus was matched. The finding that name-visual matches resembled visual-visual matches rather than naming latencies indicates that comparison in that task was based on a generated visual code. —*Journal abstract*.

10018. Gregg, Claudette L. & Psnak, Robert. (Catholic U. of America) **Effects of instructions and training on shape constancy.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 485-486. —16 undergraduate volunteers were instructed to judge both the true shapes and the retinal images of tilted triangles in reduced cue viewing conditions and were given feedback on the correctness of their responses. Ss were able to change their judgments in accordance with the instructions; the correction procedure itself had only a small effect. —*Journal abstract*.

Eye Movement

10021. Edwards, David C., Antes, James R., Adams, Randall W., & Trumm, Gerald A. (Iowa State U.) **Comparison of first-eye-movement detection methods.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 435-441. —Detected the 1st eye movement from a point of fixation by direct observation, by electrooculograph (EOG), and by corneal reflection apparatus. 6 male graduate students and faculty members served as Ss. Essential agreement was obtained among the measures. Only with movements less than 5° were there serious numbers of discrepancies in detection against the criterion of photo-recorder corneal reflection measurement. A horizontal movement was detected more reliably than a vertical movement. The EOG was most likely to miss detection of a vertical movement. The efficiency of the measures regarding movement detection and monitoring choice-looking-behavior are discussed. —*Journal abstract*.

Brightness & Contrast Discrimination

10022. Fitch, Jean H. (Washington U.) **Effects of area and reflectance of lightness contrast and assimilation: A test of the area-luminance hypothesis.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6931.

10023. Semmelroth, Carl C. (Cleveland State U.) **Prediction of lightness and brightness on different backgrounds.** *Journal of the Optical Society of America*, 1970(Dec), Vol. 60(12), 1685-1689. —Hypothesizes 2 psychophysical responses to surface or self-luminous stimuli. A response to the luminance of the stimulus (α) and a response to the luminance difference between the stimulus and its surround (β) are both considered to be power functions. Lightness or brightness is taken to be an additive or subtractive combination of these 2 responses ($\alpha \pm k\beta$) depending on whether the surround is darker or brighter than the stimulus, respectively. This model is shown to produce a quantitatively adequate explanation of H. Takasaki's data on crispening. An attempt is made to use this formulation to fit scaling data from previous magnitude-estimation and partitioning studies of lightness and brightness in which different results have been obtained from different backgrounds. Data from matching experiments that involve different backgrounds for the comparison and standard stimuli are also analyzed by means of the same formulation. The model is compared with the Adams-Cobb-Judd formulation of background effect on lightness, the Takasaki empirical formula for crispening, and Stevens's power-law formulation for brightness and lightness. (19 ref) —*Journal abstract*.

AUDITION

10024. Bregman, Albert S. & Campbell, Jeffrey. (McGill U., Montreal, Quebec, Canada) **Primary auditory stream segregation and perception of order in rapid sequences of tones.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 244-249. —Examined the finding by R. Warren, C. Obusek, R. Farmer and R. Warren (see PA, Vol. 45:1605) that listeners were unable to judge the order of 3 or 4 nonspeech sounds presented in a repetitive cycle. 2 experiments with 32 and 21 undergraduates show that at high presentation rates of a short cycle of 3 high and 3 low tones Ss invariably segregated the tone sequences into streams relating frequency and could perceive only those patterns relating elements of the same subjective stream. (18 ref) —*Journal abstract*.

10025. Dimmick, Kenneth D. (Stanford U.) **Effects of accessory sensory stimulation on auditory perception.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6971.

10026. Djupesland, G. & Zwislock, J. J. (Rikshospitalet, Oslo, Norway) **Effect of temporal summation on the human stapedius reflex.** *Oto-Laryngologica*, 1971(Feb), Vol. 76(2), 262-265. —Studied the sensitivity of the acoustic stapedius reflex as a function of stimulus duration by monitoring acoustic-impedance changes at the eardrum in 10 yr. old Ss. Results indicate an unexpectedly pronounced duration effect. The sound intensity required for a criterion response had to be lowered by about 20 dB when the signal duration was increased from 10 to 100 msec. (French & German summaries). —*Journal abstract*.

10027. Perrott, David R. (California State U., Los Angeles) **Signal and interaural level difference effects on binaural critical band.** *Journal of Acoustical Research*, 1970(Jan), Vol. 10(1), 1-4. —Binaural fusion thresholds were determined for a sinusoidal tone as a function of signal level and interaural level difference. Binaural bandwidth, as defined by sinusoidal tone, increased as a direct function of signal level. These results are in agreement with the notion that the binaural fusion mechanism could be described as analogous to the

tunability of individual neurons sensitive to binaural input. The interaction of bandwidth with interaural level differences is less readily defined and may simply reflect contralateral masking.—*Journal summary.*

Perception

10028. Ahumada, Al & Lovell, John. (U. California, Irvine) **Stimulus features in signal detection.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1751-1756.—Short bursts of computer-generated Gaussian noise were rated by Os for the presence or absence of a 500-Hz signal tone burst in 2 experiments with 17 undergraduates and young faculty members. A multiple regression analysis found for each O the linear combination of the energies in narrow bands around the tone frequency that best predicted his total ratings. The estimates of the regression coefficients provided graphs of the frequency responses of the Os. Most of the reliable variance in the total ratings was accounted for by the regression analysis in terms of energy in narrow bands. Differences among Os are explained in terms of differential weighting by Os of features labeled "tone presence," "pitch," and "loudness." (20 ref.)—*Journal abstract.*

10029. Elfner, Lloyd F., Bothe, Gary G., & Simrall, Dorothy S. (Florida State U.) **Monaural localization: Effects of feedback, incentive, and interstimulus interval.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 11-16.—Localization tests using 1-sec bursts of white noise were run on simulated monaural college students in both a 2-loudspeaker and a 4-loudspeaker situation, in which no loudness information was available. Some Ss were able to localize well even with a $\pm 15^\circ$ separation of speakers either front or back across the midline, and the rest were able to improve their performance with information feedback. Additional mild monetary incentive had no effect. Performance remained high with interstimulus intervals as long as 33 sec.—*Journal summary.*

10030. Le Ny, Jean F. (U. Paris-Vincennes, Psychology Lab., France) **Certitude exprimée et généralisation du stimulus dans une tâche d'identification perceptive.** [Expressed confidence and stimulus generalization in a task of perceptive identification.] *Année Psychologique*, 1970, Vol. 70(1), 19-32.—In Phase 1, a pure tone and others differing in frequency were presented; in Phase 2, all stimuli except the original. A plus indicated recognition of the original, a minus for all others, and an indication of confidence from 1-3. Results showed the existence, for both positive and negative responses, of a gradient of confidence that was a function of stimulus similarity. Suppression of the original stimulus produced a decrement in the number of correct identifications and in confidence, this decrement depending on stimulus similarity. (32 ref.)—G. Rubin-Rabson.

10031. Pinheiro, Marilyn L. & Placek, Paul H. (Case Western Reserve U.) **Reversals in the perception of noise and tone patterns.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1778-1782.—Investigated perception of auditory patterns based on an intensity difference in 20 experienced normal-hearing Ss under binaural and monaural listening conditions. Patterns were made up of either 3 white-noise bursts or 3 1000-Hz tone bursts which were temporally spaced. Bursts within each pattern differed

only in intensity and were either loud (L) or soft (S), i.e., each pattern included 1 of 1 intensity and 2 of the other. The 6 possible patterns were SLS, LSL, LLS, SSL, LSS, and SLL. The loud bursts remained at a constant intensity and the soft bursts were attenuated by either 9, 7, 5, or 3 db. Patterns were presented at 50-db sensation level. Tone-burst patterns were easier to perceive and resulted in a larger number of correct responses than noise-burst patterns. However, there was no significant difference between tone- and noise-burst patterns in the percentage of errors that were pattern reversals. Symmetrical patterns were reversed more frequently than asymmetrical patterns. Auditory pattern reversals are compared to figure-ground reversal and simultaneous contrast phenomena in vision and are discussed in relation to sensory inhibition.—*Journal abstract.*

10032. Rochester, Sherry. (U. Toronto, Clarke Inst. of Psychiatry, Ontario, Canada) **Detection and duration discrimination of noise increments.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1783-1789.—When weak signals are presented in a background of continuous noise, the process of detection and the discrimination of a change in duration appears to be very similar. 2 experimental techniques were used (with 1 male and 2 female listeners in each group) to investigate duration discrimination. The procedure in which the difference in duration between signals, ΔT , was varied given a fixed signal-to-noise ratio gave different results than the procedure in which signal amplitude was varied given a fixed ΔT . Although there were marked individual differences, all Ss roughly supported the general conclusion. (22 ref.)—*Journal abstract.*

10033. Sandusky, Arthur & Ahumada, Al. (U. California, Santa Barbara) **Contrast in detection with gated noise.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1790-1794.—In 2 experiments with 10 undergraduates and young faculty members, the response bias in yes-no detection with gated noise and simultaneously gated signal plus noise was found to show both sequential and probability contrast. The sequential dependencies showed that the more recent a signal event, the more the response bias shifts away from yes. Similarly, the more probable the presentation of a signal, the more the response bias shifts away from yes. The response bias in detection with continuous noise usually shows the opposite effect—response assimilation. The probability of a yes response increases with either greater signal probability or with signal recency. It is suggested that the response-bias learning which has been postulated to occur in detection experiments depends on the stability of the judgmental frame of reference provided by the continuous noise. When this basis is removed, as in the present study, the response pattern parallels that usually observed in signal recognition studies for which responses are assumed to depend on the memory of the previous presentations. It is concluded that the response pattern, assimilation or contrast, depends more on the stability of the frame of reference than on the type of psychophysical task. (17 ref.)—*Journal abstract.*

10034. Simon, J. Richard; Craft, John L., & Small, A. M. (U. Iowa) **Reactions toward the apparent source of an auditory stimulus.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 203-206.—Utilized interaural phase shifts to manipulate the spatial locus of a stimulus and the potency of the directional cue in 2

experiments with 16 male and 16 female undergraduates in each. Reactions to binaural tonal commands signifying "right" or "left" were significantly slowed when the meaning of the command conflicted with its apparent source. Results indicate that the stronger the directional cue, the greater the interference with information processing.—*Journal abstract.*

10035. Stokinger, T. E., Cooper, W. A., & Lankford, J. E. (Veterans Administration Hosp., Oklahoma City, Okla.) **Effect of interval durations on interaural loudness balancing.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 35-44.—2 experiments were performed on normal-hearing young men to study the effects of varying the duration of interstimulus intervals on the loudness relation of pure tones 1 kcps presented successively to the opposite ears. Interval durations of less than 240-400 msec. resulted in an overestimation of the loudness of the 2nd tone, the classic negative time-order error (TOE). With intervals from 400 to at least 1600 msec the loudness of the 2nd tone was underestimated (positive TOE). The existence of interaural TOE suggests that the 2 ears of an individual do not respond independently to successive, though temporally discrete, stimuli, but that central or binaural interaction occurs. Measurements of auditory phenomena which utilize successive interaural loudness comparisons may therefore be affected by the TOE and should take its presence into consideration.—*Journal summary.*

10036. Sussman, Harvey M. (U. Texas) **The laterality effect in lingual-auditory tracking.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1874-1880. Investigated binaural sensory processing when continuous nonspeech tonal stimuli were dichotically presented to 10 male undergraduates. The experimental task consisted of auditory (frequency) pursuit tracking, and consequently there was no influence of selective attention or competition on the listening task. The target sound was externally controlled, whereas the cursor sound was generated and controlled by the transduced movements of either the S's tongue or hand. A significant laterality effect was found only when the source of motor control over the acoustic signal was the speech-related movements of the tongue. Theoretical implications of these results towards a feedback regulatory theory of speech production are discussed. (18 ref.)—*Journal abstract.*

10037. Taylor, M. M., Clarke, D. P., & Smith, S. M. (Defence Research Establishment Toronto, Ontario, Canada) **Monaural detection with contralateral cue (MDDC): III. Sinusoidal signals at a constant performance level.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1795-1804.—2 female Ss detected a monaural sinusoid burst masked by continuous white noise, either with or without an unmasked contralateral cue. The cue, presented in intervals of each 2-interval forced-choice trial, was a sinusoid of the same frequency and duration as the signal, but its phase and intensity were experimentally varied. In 3 preliminary experiments it was shown that (a) when the cue nominally matched the frequencies and intensity, it improved detection at frequencies below about 1200 Hz. and was detrimental at frequencies above about 1400 Hz.; (b) at 500 Hz., cue phase strongly affected detection performance, some phases resulting in performance much worse than without the cue; (c) at 500 Hz., the effect of cue intensity was small for the cue

phase giving best performance (good phase), but increasing the cue intensity was detrimental to performance with a bad phase. With very loud cues, regardless of phase, performance declined with increasing cue intensity. The main experiment was a factorial study to examine the interactions of frequency, cue phase, and cue intensity. Phase was again found to be important at frequencies below about 1200 Hz., and to be more important the louder the cue. Worst performance at midfrequencies was found for the phase representing a cue lead of about 700 μ sec. The phase and the related interaural time difference giving best performance were functions of both cue intensity and frequency.—*Journal abstract.*

10038. Wilbanks, W. A. (U. Georgia) **Detection of a narrow-band noise as a function of the interaural correlation of both signal and masker.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1814-1817.—In an experiment with 5 Ss, the signal, 135-Hz noise centered at 250 Hz., was partially masked by continuous wide-band noise. The interaural correlation of both signal and masker was varied between +1 and 0. With a correlated masker, detection is about 14 db. better with an uncorrelated signal than with a correlated signal. The masking-level difference (MLD) diminishes as the correlation of the signal is increased to unity and as the correlation of the masker is decreased to 0. Results imply that sizable MLDs are obtained under those conditions where the addition of the signal to the noise results in a decrease in the correlation between the stimulus events at the 2 ears. (16 ref.)—*Journal abstract.*

Speech Discrimination

10040. Baumrin, Judith A. (Washington U.) **Confusions in the perception of verbal and non-verbal items as a function of response modality.** *Dissertation Abstracts International*, 1971(May), Vol. 31(1-B), 6918

10041. Coleman, Robert F. (Vanderbilt U.) **Effect of median frequency levels upon the roughness of jittered stimuli.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 330-336.—Investigated the relationship between median frequency levels and roughness perception for jittered stimuli. Median frequency levels were combined with 4 jitter conditions to form stimuli which were submitted to 32 undergraduate listeners who judged roughness by paired-comparison matching, magnitude estimation techniques. Results show the same trends in each of the procedures. Stimuli of lower median frequency were judged to be rougher than those of higher median frequency for all jitter conditions. It was concluded that the median frequency level of jittered waveforms affect the perception of roughness in analogue stimuli.—*Journal abstract.*

10042. Erber, Norman P. (Central Inst. for the Deaf, St. Louis, Mo.) **Interaction of audition and vision in the recognition of oral speech stimuli.** *Journal of Speech & Hearing Research*, 1968(Jan), Vol. 1(2), 423-425.—Conducted an experiment with 16 normal male 20-23 yr old adults to gather data on manner of speech reception in acoustic noise. Auditory and visual speech reception in acoustic noise was found to be superior to recognition via auditory-only under a wide

range of speech-to-noise (S/N) conditions. Data support the theory that Os rely increasingly on visual cues for speech information as S/N ratio is degraded. Audition-only performance was found to be less variable among Ss than was audiovisual recognition. Increased variability in audiovisual scores at poorer S/N ratios was attributed to differences in lip-reading skill among untrained Ss. Speech levels so low that recognition by audition-only approximated chance behavior were found, nevertheless, to systematically improve Os' audiovisual scores as a function of increasing S/N ratio.—*Journal abstract.*

10043. Horii, Yoshiyuki; House, Arthur S., & Hughes, George W. (Purdue U.) **A masking noise with speech-envelope characteristics for studying intelligibility.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1849-1856.—A noise whose amplitude envelope followed closely that of a concomitant speech signal was generated by multiplying white noise and the amplitude envelope of the speech, permitting the signal-to-noise (S/N) ratio to be specified on a short-time nonvarying basis. The spectrum of the amplitude envelope for continuous speech was studied with 22 young adults, and the distributions of the vowel and consonant levels in articulation test materials were determined. Articulation functions in such noise and in continuous white noise were generated. Within the range of S/N ratios studied, the gains of the functions for vowels and consonants were 4 and 2.5 % db, respectively, in both types of noises. Results clearly depict the operational differences between conventional and envelope-noise S/N-ratio specification and suggest that use of the envelope-noise masker may eliminate some of the problems associated with current methods. (29 ref.)—*Journal abstract.*

10044. Kreul, E. James; Bell, Donald W., & Nixon, James C. (Stanford Research Inst., Menlo Park, Calif.) **Factors affecting speech discrimination test difficulty.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 281-287.—Examined changes in item and overall test difficulty of speech discrimination and intelligibility tests as a function of (a) carrier phrase, (b) talker, (c) reutterances by a talker, and (d) level of accompanying noise. Results with 23 junior college students indicate that all of these variables must be considered in test development. It is concluded that only the actual recordings of the spoken lists of words, not the word lists themselves, should be thought of as test material.—*Journal abstract.*

10045. Mattingly, Ignatius G., Liberman, Alvin M., Syrdal, Ann K., & Halwes, Terry. (Haskins Lab., New Haven, Conn.) **Discrimination in speech and nonspeech modes.** *Cognitive Psychology*, 1971(Apr), Vol. 2(2), 131-157.—Discrimination of 2nd-formant transitions was measured under 2 conditions: when, as the only variation in 2-formant patterns, these transitions were responsible for the perceived distinctions among the stop-vowel syllables, and when, in isolation, they were heard, not as speech, but as bird-like chirps. The discrimination functions obtained with the synthetic syllables showed high peaks at phonetic boundaries and deep troughs within phonetic classes; those of the nonspeech chirps did not. Reversal of the stimulus patterns, producing vowel-stop syllables in the speech context and mirror-image chirps in isolation, affected the speech and nonspeech functions differently. An additional nonspeech condition, presentation of the transitions plus the 2nd-formant steady state, yielded data

similar to those obtained with the transitions in isolation. These results support the conclusion that there is a speech processor different from that for other sounds. (30 ref.)—*Journal summary.*

10046. Spreen, O., & Boucher, A. R. (U. Victoria, British Columbia, Canada.) **Effects of low pass filtering on ear asymmetry in dichotic listening and some uncontrolled error sources.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 45-51.—Meaningful 1-syllable words matched for initial phoneme were presented dichotically to 32 Ss under 4 low-pass filter conditions ranging from 2.5-1 kcps. A right ear superiority of recall obtained at the 2.5-kcps condition disappeared gradually with increasing amount of filtering. Results were interpreted as support for the notion that right ear superiority is dependent on the degree of similarity of the stimulus material to highly encoded speech sounds. An examination of differences in intensity, onset, and offset between pairs of simultaneously presented words showed that these error sources did not significantly affect the results, but a consistent trend among the results obtained for all 3 variables suggests the need for a careful control in future studies of dichotic listening. (18 ref.)—*Journal summary.*

Audiometry

10047. Copeland, Alfred B., & Mowry, Harris J. (Southern Illinois U.) **Real-ear attenuation characteristics of selected noise-excluding audiometric receiver enclosures.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1757-1761.—Measured the attenuation characteristics of 3 commercial audiometric headsets of the noise-barrier type—Aural Research (AR-100) "auraldomes," Madsen (Type ME-70) "noise-excluding headset," and Rudmose (RA-125) "otocups" and a standard audiometric headset (Telephonics 1DH-39 earphone with an MX-41/AR cushion). The threshold-shift method was used with 4 normally-hearing Os, employing a pure-tone sound field in an anechoic room. The resulting attenuation data for each of the noise-barrier headsets were compared statistically to those for each of the others and to the data for the standard headset. Data are contrasted with those supplied by the manufacturers. In terms of their attenuation capabilities for the octave bands pertinent to audiometry, the Rudmose otocup is ranked 1st, the auraldome 2nd, and the Madsen headset 3rd. It is suggested that (a) attenuation data alone should not determine the acceptability of any such device, and (b) the potential user should consider use only after measurement of octave-band noise levels in the environment in question. (17 ref.)—*Journal abstract.*

10048. Hattler, Karl W., & Northern, Jerry L. (Walter Reed General Hosp., Army Audiology & Speech Center, Washington, D.C.) **Clinical application of temporal summation.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 72-78.—Temporal summation functions were determined with 20 normal-hearing Ss classified by flat or sloping audiometric hearing loss configurations. Auditory thresholds were obtained at standard audiometric frequencies with 8 stimulus durations ranging from 10-300 msec. The temporal summation patterns were clinically reliable and virtually unaffected by changes per log unit of stimulus duration time were essentially the same under quiet or ipsilateral masked

background conditions. Substantially smaller S variability was shown for Ss at test frequencies where cochlear hearing impairment was present. Temporal summation measurement was found to be particularly sensitive to cochlear impairment and is recommended for inclusion in the clinical audiologic test armament.—*Journal summary.*

10051. Ventry, Ira M., Woods, Robert W., Rubin, Martha, & Hill, Wathina. (Teachers Coll., Columbia U.) **Most comfortable loudness for pure tones, noise, and speech.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1805-1813.—Studied most comfortable loudness (MCL) levels for pure tones, broad- and narrow-band noise, and connected speech in 3 independent experiments using Békésy audiometers and 192 young (mean age, 22.4) normal-hearing males and females. Differences in MCL were explored as a function of attenuation rate, sex, frequency of the pure-tone and narrow-band stimuli, interrupted vs. continuous pure-tone stimuli, instructional set, session, and a modified Békésy operation which allowed the S to hold intensity constant over time vs. standard Békésy operation. There were no significant sex, set, session, or operation differences. In all 3 experiments, a 2.5-dB/sec operation differences. In all 3 experiments, a 2.5-dB/sec attenuation rate produced higher MCLs than a 1.25-dB/sec rate. In general, a 500-Hz tone or narrow-band noise centered at 500 Hz. was tracked at the highest SPLs, while broad-band noise was consistently tracked at the lowest levels. Regardless of frequency or attenuation rate, continuous pure tones were tracked at higher SPLs than interrupted pure-tone stimuli. Although inter-S variability was relatively high, the majority of test-retest differences in each experiment was 10 db. or less. Over-all MCLs in decibels SPL re .0002 μ bar were 49.3 for speech, 49.4 for noise, and 51.7 for pure tones. (23 ref.)—*Journal abstract.*

CHEMICAL SENSES

10052. Mitchell, M. J. & Gregson, R. A. (U. Canterbury, Christchurch, New Zealand) **Between-subject variation and within-subject consistency of olfactory intensity scaling.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 314-318.—10 male and 10 female undergraduates made magnitude estimations of olfactory intensity on 4 separate test sessions as closely matched as possible. The only independent variable manipulated was the chemical nature of the stimuli: eugenol was tested on 2 occasions, n-propanol on the others. Exponents of psychophysical power functions showed low within-S variability and while within-group variability was high, the between-S dif-

ferences were very consistent over sessions. The implications of these findings for traditional methods of obtaining group exponents are discussed. Some changes in procedure are considered necessary since group exponents were identical for the chemicals tested (16 ref.)—*Journal abstract.*

SOMESTHESIA

10054. Benson, Alan J. & Guedry, Fred E. **Comparison of tracking task performance and nystagmus during sinusoidal oscillation in yaw and pitch.** (SS) *AMRL Army-Navy Joint Report*, 1970(Oct), No. 1123, 20 p.—Sinusoidal torsional oscillation (.041Hz, peak angular velocity ± 60 to $\pm 159^\circ$ /sec) degraded Ss' performance of a compensatory tracking task because inappropriate nystagmic eye movements impaired visibility of the display. Response to angular oscillation in yaw and pitch were compared. 2 experiments with 11 and 6 healthy young men, respectively, were conducted. During angular motion in the pitch-forward direction the nystagmus frequency and slow phase velocity and the consequent performance decrement, were significantly greater than during the pitch-back $\frac{1}{2}$ cycle. No such asymmetry was found during oscillation in yaw where the nystagmus measures and error scores were similar to those obtained in the pitch-back $\frac{1}{2}$ cycle. The poorer suppression of vestibular nystagmus during pitch and forward motion is attributed to the higher frequency and smaller amplitude of downbeating nystagmus. Any differential oscillation in pitch induced motion sickness more rapidly than a comparable yaw-axis stimulus. This was probably caused by differences in the dynamic response of vertical and lateral canals and the greater mismatch of canal and gravireceptor signals during oscillation in pitch. (18 ref.)—*Journal abstract.*

10055. Carmon, Amir & Finger, Stanley (Hebrew U., Hadassah Medical School, Jerusalem, Israel) **Spatial and temporal interaction in tactile adaptation.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 427-433.—Examined adaptation to 1 weight as a function of the temporal parameters of a spatially dynamic 2nd weight in 3 behavioral studies in which large series of trials in multiple sessions were presented to female and male undergraduates. A positive relation between adaptation time and stimulus intensity was observed, and the preceding weight served to decrease adaptation time to the test stimuli in all experiments. The role of neural inhibition in pressure adaptation is discussed.—*Journal abstract.*

10056. La Pointe, Leonard L. & Williams, William N. (Veterans Administration Hosp. Gainesville, Fla.) **Effect of selected form attachment devices on oral stereognosis scores.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 469-470.—Tested 12 adults with normal speech on a 10 form task of intraoral form identification (oral stereognosis) under 3 conditions: (a) forms attached to stainless steel orthodontic wire, (b) forms attached to nylon mandibular arch, and (c) forms with no attachment device. No significant differences were found among conditions in either response accuracy or time.—*Journal abstract.*

discrimination on the two sides of the tongue: A preliminary report. *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 368-370. —Used 25 young adults in a study of asymmetry in spatial discrimination on the 2 sides of the tongue. 10 2-point limen values were established on the left and right tongue margins of each S. Analysis shows statistical evidence of asymmetry in spatial discrimination ability in 14 of the Ss, supporting the concept that "sensory sidedness" in the tactile sensory system may be a normal neurological phenomenon. (17 ref.)—*Journal abstract*.

10058. **Parker, David M.** (San Fernando Valley State Coll.) **A psychophysiological test for motion-sickness susceptibility.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 87-92. —In a combined field and laboratory study of a new technique for predicting motion-sickness susceptibility the volar sweating of 100 undergraduates viewing a film depicting motion was measured. Ss who showed .100-micromho changes in conductance were considered prone to motion sickness. Under field conditions at sea 10 Ss judged to be susceptible became seasick, while 10 judged to be immune did not. A modification of Reason's "receptivity" hypothesis is advanced which elucidates the results of the experiment.—*Author abstract*.

10059. **Potemkin, B. A. & Frolov, K. V.** (State Research Inst. for Machine Operation, Moscow, USSR) **O model'nykh predstavleniyakh biomekhanicheskoi sistemy "chelovek-operator" pri sluchainom vibratsionnom vozdeistvii.** [Biomechanical models of the human operator, affected by random vibration.] *Doklady Akademii Nauk SSSR*, 1971, Vol. 197(6), 1284-1287. —Vibrations ranging from 2-200 Hz., produced by a random vibration generator, were amplified and applied to the S's body in 3 different sitting positions by way of a sitting platform. Vibratory output was recorded from a transducer attached to the S's head and used to evaluate the transmission functions of the human body, assuming it to be a static and linear system. Mathematical models representing the human body in terms of its vibratory input and output characteristics as a function of posture were formulated.—*L. Zusne*.

10060. **Reason, James T. & Graybiel, Ashton.** (U. Leicester, England) **The effect of varying the time interval between equal and opposite Coriolis accelerations.** *British Journal of Psychology*, 1971(May), Vol. 62(2), 165-173. —Investigated the effect of varying the time interval between 2 equal and opposite Coriolis accelerations on the duration of the subjective responses evoked by the 2nd stimulus in 20 navy enlisted men and male undergraduates. Theoretical curves derived from the torsion pendulum model approximated fairly closely the reported durations of the subjective phenomena which increased as a function of the time interval between the 2 Coriolis accelerations. This result supported the a priori assumption that the neural events underlying the subjective phenomena are closely linked to mechanical events occurring within the cupula-endolymph system. However, (a) the estimated time constants of signal decay were shorter than those expected on the basis of the known mechanics of the semicircular canal system, and (b) the persistence of the Coriolis sensation (feelings of apparent whole body motion without visual reference) was greater at all intervals than the Coriolis oculogyral illusion. Adequate explanation of these findings requires the postulation of additional central mechanisms.—*Journal abstract*.

10061. **Wade, N. J. & Schöne, H.** (U. Dundee, Scotland) **The influence of force magnitude on the perception of body position: I. Effect of head posture.** *British Journal of Psychology*, 1971(May), Vol. 62(2), 157-163. —Investigated judgments of body position during rotation in the sagittal plane at force magnitudes of 1, 1.2, 1.4, 1.6, and 1.8 g. With the head and trunk upright, the judgments of 6 Ss were displaced forward as a function of the force operating. The forward shift could be related to the increase in the backward acting shear force on the utricular statolith organs. This hypothesis was supported by the reduced forward shift in perceived body position that occurred under the same conditions but with the head tilted 30° forward of the upright trunk. (23 ref.)—*Journal abstract*.

10062. **Williams, William N. & La Pointe, Leonard L.** (U. Florida) **Intra-oral recognition of geometric forms by normal subjects.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 419-426. —Determined oral form recognition abilities for 40 normal 20-59 yr. old Ss, using 12 different geometric forms in 8 sizes. The purposes were: (a) to explore such related variables as form complexity, form size, Ss' age, sex, and education level, and Ss' response time; and (b) to reduce the total number of test items to a more manageable level by selecting those shapes and sizes from the original test items which contribute most to the obtained oral stereognosis scores. There were no significant differences for sex or educational level, but significant relations were found among performance levels and age groups. Ss' performance tended to be inversely related to response time. Within the limits of several criteria, 10 forms were selected which can practically and effectively provide a measure of oral form recognition. And, these forms may permit assessment of oral sensory integrity.—*Journal abstract*.

10067. Kihlstrom, John F. & Edmonston, William E. (U. Pennsylvania) Alterations in consciousness in neutral hypnosis: Distortions in semantic space. *American Journal of Clinical Hypnosis*, 1971(Apr), Vol. 13(4), 243-248.—30 highly hypnotizable Ss were equally divided into 3 groups, equated for age, sex, and hypnotic susceptibility. A semantic differential scale was administered to each S in waking, individual sessions. An oral form of the same scale was administered during: (a) hypnosis, (b) waking-posthypnosis, and (c) waking, no hypnosis. All groups showed significant change between administrations of the scale; hypnosis showed more change than waking-posthypnosis, and the latter more than waking, no hypnosis.—*M. V. Kline.*

MOTIVATION & EMOTION

10069. **Brookshire, Robert H. & Eveslage, Roberta A.** (Veterans Administration Hosp., Kansas City, Mo.) **Verbal punishment of disfluency following augmentation of disfluency by random delivery of aversive stimuli.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 383-388.—10 normal adult speakers read a passage, 1st in a random condition, then in a contingent condition. In each condition, Ss read in 30-min sessions: (a) 5-min base rate, (b) 15-min conditioning, and (c) 10-min extinction. During conditioning in random condition, Ss received a .75-sec. 95-db burst of white noise on a random schedule. During conditioning in contingent condition, Ss heard the word "no" each time they were disfluent. Disfluency increased under random noise and decreased under contingent no. Results indicate that disfluency that is established or augmented by an aversive stimulus is amenable to suppression by punishment with a different aversive stimulus.—*Journal abstract.*

10073. **Geen, Russell G.** & Powers, Patrick (Missouri) **Shock and noise as instigating stimuli in human aggression.** *Psychological Reports*, 1977 (Jan)

Vol. 28(3), 983-985.—In 2 separate experiments with 15 male undergraduates each, Ss were either attacked or not attacked by a confederate (C), with shocks or loud noises. In each case, S was later allowed to retaliate in kind to C. Ss attacked with shocks retaliated with both a greater number and greater intensities of shock than Ss not attacked. Ss attacked with loud noise retaliated more than nonattacked Ss only in terms of the number of noise bursts given. It is concluded that shock is a more reliable instigator of retaliatory aggression than average noise.—Journal abstract.

10074. Goyeche, John R. & Thysell, Richard V. (1971). Waterloo, Ontario, Canada) Cardiac index of the orientation reaction as a function of anticipation interval. *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 619-630. Investigated the form of the heart-rate (HR) response in anticipation of a brief visual stimulus and to determine whether the form of the response changed over trials. 14 undergraduates were exposed to 12 presentations of a visual stimulus which they identified. $\frac{1}{3}$ the Ss were presented with the stimulus every 10 sec., $\frac{1}{3}$ every 15 sec. HR was recorded for each sec. during the anticipation intervals. Results indicate that the cardiac anticipatory response in the 10-sec. group was triphasic: a slight deceleration, followed by an acceleration, followed by a deceleration of approximately equal magnitude, and that the response habituated during the last block of 4 trials. In the 15-sec. interval the anticipatory response was biphasic and was primarily biphasic (acceleration followed by deceleration) appeared to be in the previous block of trials. In the 12-sec. triphasic HR response was not habituated. Index of the cardiac response was calculated and habituated as a temporal function. gence between the anxiety and arousal scales (N = 144 undergraduate students) and nonpathological levels of anxiety and arousal. (b) the convergent validity of the scales, greater in a sample of nonpathological students than in a sample of clinical patients. (c) clearly and unambiguously support Malmlo's theory of the convergence of arousal and anxiety. (d) to include the range of arousal and anxiety in the scales. (e) the scales can be considered as a general measure of arousal rather than as a measure of anxiety. (f) the scales are valid and reliable.

of arousal

10077. Kaurer, Warren R. *Phylogenetic analysis of nondirective generalized drive.* Ph.D. diss., University of California, San Diego, 1970. 140 pp.

Hull, drive energized but did not direct behavior. An important issue is whether or not it is necessary to postulate a plurality of drives. Such a formulation seems to have its basis in the fact that different antecedent conditions can motivate an organism. If plurality is assumed, all drives must be thought of as having something in common yet differing in some aspect. In the absence of a better theory, the generalized drive construct still has interpretive utility. An intellectual debt to J. S. Brown is acknowledged. (70 ref.)—*R. D. Nance.*

10078. Nourse, James C. & Welch, Robert B. (U. Kansas) **Emotional attributes of color: A comparison of violet and green.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 403-406.—Exposed 14 undergraduates for 60-sec intervals to violet light and to green light, in alternating order, for a total period of 6 min. Electrical skin conductance was monitored throughout the session. The crucial measure was the GSR occurring in the 1st 12 sec. of exposure to a given color. As predicted, GSR was greater to violet than to green.—*Journal abstract.*

(Purkyně U., Brno, Czechoslovakia) **Obtížnost percepce a rekognice symbolů použitých v hledacím úkolu.** [Difficulty of perception and recognition of symbols in detection tasks.] *Activitas Nervosa Superior*, 1970(May), Vol. 12(2), 132-134.—2 groups of 18-yr-old Ss looked for specific symbols on 3 tasks. Each task was a 7 × 7 square with 49 symbols (2-digit number, 2 letters, clocks with different times). Ss had to identify quickly 10 or 20 symbols. After that Ss were to recognize symbols on lists. (Each list contained 1/3 symbols which they were looking for on the task, 1/3 which were not on the recognition list, and 1/3 which were on the recognition list.) Ss noted on a 5-point scale the degree of certainty of recognition. Perception of letters was slightly more difficult than numbers, and much more difficult with clocks.—*H. Bruml.*

10087. Halcomb, Charles G., McFarland, Barry P., &

Denny, Nathan R. (Texas Technological Coll.) **Monitoring performance with a time-shared memory task.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 347-351. 30 female undergraduates participated in an auditory vigilance task, time-shared with a memory task. Results show no change in memory whether assessed independently or time-shared with the vigilance task. The task consisted of a taped series of random digits between 1 and 10, in which Ss were to detect the occurrence of 3 odd digits in a row. The vigilance performance demonstrated the classical vigilance decrement. Ss performing the vigilance task time-shared with the memory task performed significantly more poorly than Ss performing the vigilance independently of the memory task.—*Journal abstract.*

10089. Prangishvili, A. S. (Georgian Academy of Sciences, Tbilisi, USSR) **Problema ustanovki na sovremenom urovne ež razrabotki.** [The problem of set at the present level of its development.] *Matsne*, 1968, No. 5, 129-142.—Discusses the major results obtained from studies on the concept of set, conducted by the Georgian psychological school in the USSR. Examines those aspects of the theory of set which are, at the present level of the theory, of greatest interest, and in this connection presents the results of research attempting to substantiate the method of "fixed set" (attitudes) as an experimental path to the study of the "general psychological problem of the person." Discusses the place of the concept of set in different branches of psychology: learning theory, cybernetic theory of behavior including engineering psychology, and psycholinguistics. Analyzes the place of set in social psychology and presents experimental findings in favor of a much broader conception of set than that represented in the Yale social-psychological studies on individual evaluative judgments about debatable social issues.—*I. D. London.*

10091. Šverko, Branimir. (Inst. of Psychology, Faculty of Philosophy, Zagreb, Yugoslavia) **Korelacijska analiza uspjesnosti u detektiranju rijetkih signala različitog osjetnog modaliteta.** [A correlational analysis of detection of rare signals presented through different sensory channels.] *Revija za Psihologiju*, 1970, Vol. 1(2), 13-21.—Attempted to ascertain the degree of correlation among individual performances in a long-term monitoring (vigilance) task in which the signals to be detected were presented through different sensory channels. The vigilance task consisted of a type-recorded train of stimuli similar to Morse signals. The frequency of the critical signals was 24/hr. The stimulus material was displayed to 80 Ss by means of a loudspeaker (auditory stimuli), finger electrodes (electrocutaneous stimuli), and 2 visual displays (discrete flashes of light stimuli) and pointer deflections. After a practice session, each S was given 8 consecutive daily sessions with 4 different displays. Every session lasted about 90 min. Order of occurrence of different displays was counterbalanced. The cross-modality correlations were high, both for the correct detections and for the false alarms (median values .77 and .63, respectively) suggesting that indi-

visual differences in vigilance performance are invariant across different sensory modalities. (English abstract) (22 ref.).—A. Fulgosi.

MOTOR PERFORMANCE

10093. Brattfisch, Oswald; Dornič, Stanislav, & Borg, Gunnar. (U. Stockholm) **Perceived difficulty of a motor-skill task as a function of training.** *Reports from the Institute of Applied Psychology, U. Stockholm*, 1970, No. 11, 7 p.—Used a simple wire labyrinth in an experiment involving learning of a 2-hand motor task. 14 21-31 yr. old university students were asked, after completing each of 7 successive trials, to give their estimates of perceived (subjective) difficulty of the task. For this purpose, the psychophysical method of magnitude estimation was used. Time was measured as a criterion of performance. 7 repetitions of the task resulted in a drop of performance time from 61-35 sec., i.e., about 43%, while the perceived difficulty decreased from the initial value of 10-5.2, i.e., 48%. The course of both functions was fairly similar; the correlation coefficient of .96 showed a close relationship between perceived difficulty and time. It is suggested that, in the task employed, the estimation of difficulty was mainly based on the perception of time.—*Journal abstract.*

10094. Cohen, Leon. (Stanford U., Medical School, Palo Alto, Calif.) **Synchronous bimanual movements performed by homologous and non-homologous muscles.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 639-644. Compared synchrony of bimanual wrist movements by 12 normal right-handed Ss when homologous muscles (e.g., left and right wrist flexors) and when nonhomologous muscles (e.g., left flexors and right extensors) were simultaneously active. Movements of the 2 limbs were less synchronous and more variable in the nonhomologous condition. Data imply the existence of a unitary coupling mechanism which facilitates simultaneous action of homologous muscles of the upper limbs.—*Journal abstract.*

10096. Eysenck, H. J. & Gray, J. E. (U. London, Inst. of Psychiatry, England) **Reminiscence and the shape of the learning curve as a function of subjects' ability level on the pursuit rotor.** *British Journal of Psychology*, 1971(May), Vol. 62(2), 199-215.—Conducted 2 experiments in which the shape of the learning curve pre- and postrest, and the reminiscence phenomenon, were studied as a function of the ability of the Ss to perform on the pursuit rotor under conditions of massed practice. 192 industrial apprentices and 210 undergraduates served as Ss under different practice and rest period conditions. Both experiments demonstrated unequivocal differences in the performance curves of high- and low-ability Ss, both before and after the rest pause. These differences were in part a function of the length of the rest pause. Reminiscence was also found to depend on ability level, with high reminiscence being found in high-ability Ss. The applicability of several different hypotheses to the phenomena is discussed. A theory is

suggested which combines features from several earlier theories. (28 ref.).—*Journal abstract.*

10097. Frith, C. D. (U. London, Inst. of Psychiatry, England) **Strategies in rotary pursuit tracking.** *British Journal of Psychology*, 1971(May), Vol. 62, 187-197.—Derived 10 measures describing different aspects of the pursuit rotor performance of 30 20-35 yr. old male volunteers. These included variables indicating the shapes of the distribution of hit and miss lengths and the amount of rhythmicity present in performance. The relationship between the various measures suggests that performance could be described in terms of 2 independent factors. (a) the level of attainment (total mean target), and (b) different strategies of performance. There was a strong relationship between strategy and personality, extroverts adopting velocity-matching and introverts adopting position-matching. There was evidence that these differences in response style were due to the greater production of rest pauses by the extroverts.—*Journal abstract.*

10098. Mackay, Donald G. & Soderberg, George A. (U. California, Los Angeles) **Homologous intrusions: An analogue of linguistic blends.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 645-661. Homologous intrusions represent a frequent type of error in tasks involving synchronous tapping with the fingers of both hands and reflect the incursion of 1 motor sequence into another in a manner resembling linguistic blends. To avoid an inadvertent combination of *fevade* and *evade*, experiments with 20 and 30 undergraduates, respectively, were conducted.—*Journal abstract.*

10099. Paben, Marjorie & Ruenzel, Joel. (East Missouri State Coll.) **Control of muscular tension in learning a novel gross motor skill.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 666-668. Told college women how to relax and how to produce, on command, given percentages of maximum tension through EMG. A comparison was made with 15 controls of the ability to learn a novel gross motor skill. Significant differences were found indicating that learned control of general muscular tension facilitates learning.—*Journal abstract.*

10100. Schott, Thomas R. (U. South Dakota) **A comparison of visual, auditory and cutaneous tracking displays when divided attention is required to a cross-adaptive loading task.** *Dissertation Abstracts International*, 1971(May), Vol. 31(10-B), 6958.

REACTION TIME

10102. Mintman, Hilder. (U. South Carolina) **Cognitive interaction in the visual field: A reaction time study.** *Psychological Reports*, 1971, 26(1), 115-116. 12 female 19-24 yr. old Ss were presented with stimulus fields each consisting of 4 points surrounded by 4 peripheral points. The Ss were required to respond with respect to the stimulus field. The peripheral words were *up*, *down*, *left*, and *right*. The RT to SC was measured. Results indicated that the RT to SC was faster when the stimulus field was identified was counted. Results indicated that the RT to SC was faster when the stimulus field was identified was counted.

relationship between field associativity and the number of SPs identified. Moreover, when an SP was identified, the RT to SC was shorter in high than in low associativity fields. In these latter, identifying an SP increased the RT to SC. Results are discussed in terms of cognitive interaction between parallel processes of stimulus identification in a system of limited capacity. —*Journal abstract.*

10103 Larimer, James O. (Purdue U.) **Reaction time: A similarity analysis.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6295.

10104 Levis, Donald J. & Warchime, Robert C. (U. Iowa) **Effects of primary and secondary aversive motivation on finger-withdrawal reaction time responses.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 126-131. —Assigned 129 male undergraduates to 4 groups which received RT instructions. Group 1 received a shock for an incorrect response. Group 2 saw a "wrong" sign light up for an incorrect response. Group 3 received no punishment for wrong responses, and Group 4 received shocks which were not paired with the RT signal. Group 1 showed significantly faster response latencies and more avoidance responding than Group 3. This effect did not appear to be dependent upon the informational value of the shock since Group 2 also responded significantly slower than Group 1, while Group 4 responded slower than each of the other 3 groups. The effects of the signal-shock condition persisted for at least the 1st 20 extinction trials. Scores on 3 personality inventories did not separate Ss on the dependent measures analyzed. It is concluded that conditioned anxiety played a significant role in producing the faster latencies. —*Journal abstract.*

10105 Morgerstern, F. S., Haskell, S. H., & Waters, P. D. (London U., Inst. of Education, England) **Distributive reaction times in single and multiple response units.** *Ergonomics*, 1971(Mar), Vol. 14(2), 219-230. Describes experiments with 22 normal adult volunteers dealing with the properties of response units to a simple stimulus, presented in the visual or auditory mode. It was found that the RT for a given letter was affected by the organization, position, and size of the response unit. The RTs for all items in response units were affected by the modality; RTs to visually presented stimuli were slower at all positions. The frequency of errors in the auditory series was almost twice that of the visual series. There was no consistent carry-over of practice with 1 response unit to another made up of a smaller or larger number of items. Results indicate a higher order of motor response integration in which a number of responses become organized into units with characteristics of their own. (French & German summaries) (27 ref.) —*Journal abstract.*

10106 Simon, J. Richard; Craft, John L., & Webster, John B. (U. Iowa) **Reaction time to onset and offset of lights and tones: Reactions toward the changed element in a two-element display.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 197-202. —Conducted 2 RT experiments with 20 male and 20 female undergraduates in each. In Exp. I, Ss responded to the onset or offset of one light in a 2-light display. On onset trials, RTs were faster toward the light which went on (changed element) than toward the light which remained off (unchanged element). Similarly, on offset trials, RTs were faster toward the light which went off than toward the light which remained on. Exp. II involved an analogous auditory task which consisted of

pressing right or left-hand keys in response to the onset or offset of a tone in 1 ear. On onset trials, results paralleled Exp. I, while on offset trials RTs were faster on the side of the unchanged element. Results indicate a potent stereotypic tendency to react toward the apparent source of stimulation. —*Journal abstract.*

LEARNING

10107 Ashley, Donald R. (Syracuse U.) **Relative influence of three possible mediators of observational learning: Imaginal, verbal and proprioceptive.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6917-6918.

10108 Blalock, Arthur S. (Human Factors Lab., Orlando Fla.) **Transfer as a function of task difficulty in pursuit-rotor and paired-associate learning.** *NASA TRAFFIC Technical Report*, 1970(Oct), No. 11112, 46 p. —Studied the generality of psychological findings across different kinds of tasks. The approach taken was to compare the influence of task difficulty on the performance in training and transfer of a paired-associate and pursuit-rotor task. Ss were 60 undergraduates in Exp. I and 80 in Exp. II. Difficulties connected with computerized attempts to answer the question of whether variables affect learning in the same way on different tasks are considered. Some problems with the concept of "task difficulty" are also treated. Suggestions for remedying these difficulties are given. —*Journal abstract.*

10110 Dorfman, Donald D. & Biderman, Michael. (U. Iowa) **A learning model for a continuum of sensory states.** *Journal of Mathematical Psychology*, 1971(May), Vol. 8(2), 264-284. —Investigated a learning model for signal detection which assumes a continuum of sensory states. The model, a generalization of a model originally proposed by M. Kac and selected special cases of this model were evaluated in a 2-alternative forced choice signal detection task. The general model and its associated special models are quite tractable from the viewpoint of parameter estimation, and the axioms of the models generate tractable functions for the theoretical probabilities on each trial. Of the special models evaluated, the Kac error-correction model gave the poorest fit on the average. (29 ref.) —*Journal abstract.*

10112 Gliner, Jeffrey A., Harley, J. Preston, & Badia, Pietro. (Bowling Green State U.) **Elicitation and habituation of the orienting response as a function of instructions, order of stimulus presentation, and omission.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 414-416. —Studied 60 female undergraduates in 4 groups which differed with respect to order of presentation of sequential stimuli (light-tone or tone-light) and instructions (concentrate on 1st or 2nd element of the sequence). All groups received 21 trials of the sequence except on Trials 11, 14, 16, and 20, when light was omitted. Response habituation showed both an order effect ($p < .01$) and an Order \times Instructions

interaction ($p < .05$). Ss with instructions to concentrate on the 1st element of the sequence showed less habituation. Some orienting responses to omission of 1 element of the compound did occur.—*Journal abstract.*

10114. Lazar, Gerald & Weiss, Ethel. (State U. New York Coll., New Paltz) **Can unlearning be undone? Tests of the inhibition hypothesis.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 819-826.—Investigated the suggestion that in the A-B, A-C paradigm, A-B recall might be facilitated after A-C learning if A-C were inhibited by a 3rd list. Exp. I with 56 undergraduates showed that while A-C can be interfered with by a C-C'r list, A-B retention loss increased, contrary to prediction. Exp. II with 45 undergraduates varied the A-C inhibition task without effect on A-B recall. However, in Exp. III with 64 undergraduates, data consistent with the inhibition hypothesis were obtained when the B items were from a different response class than all the other items on the A-C and C-C'r lists.—*Journal abstract.*

10115. Lippman, Louis G. (Western Washington State Coll.) **Organization of intralist similarity in serial learning.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 39-43.—3 groups of 15 undergraduates each anticipated a serial list of compound stimuli (clusters) for 50 trials. Each cluster consisted of 4 CCCs which (a) were similar to other units within each cluster (Group W), (b) were similar to units in corresponding spatial positions between clusters (BC), or (c) were similar to units in noncorresponding spatial positions between clusters (BNC). Group W produced more correct anticipations than BC and both of these groups produced more overt errors than BNC. Results are interpreted in terms of cue utilization and efficiency in acquisition.—*Journal summary.*

10117. Miller, Stuart. (Towson State Coll.) **Free associative prediction of mediated learning.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 187-191.—Studied the performance of 162 undergraduates in a mediated learning experiment. Ss were presented with indirectly related word pairs in each of 3 learning tasks: paired-associate, serial learning, and free recall. Learning was studied in forward facilitation, backward facilitation, and interference lists. Various measures of mediated strength, derived from free association norms, were correlated with learning. An associative overlap measure yielded higher correlations than predictors based upon a chaining model of mediation. Non-significant correlations were found in the interference conditions. (16 ref.)—*Journal abstract.*

10118. Radtke, Robert C., Jacoby, Larry L., & Goedel, George D. (Southern Illinois U.) **Frequency discrimination as a function of frequency of repetition and trials.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 78-84.—Assigned 90 undergraduates to 6 groups in which (a) words were presented at a 1- or 2-sec rate on study trials and at a 2-sec rate on test trials; and (b) the more frequent alternatives were underlined on the

1st occurrence, underlined on each occurrence, or not underlined. Over 8 paired comparison study-test trials, Ss chose the more frequent alternatives. Results indicate that (a) frequency discrimination was based on relative rather than absolute frequency differences in the no-underlining condition, (b) rate of study trial presentation had a significant effect only in the underlining conditions, and (c) performance improved over trials only in the underlining conditions. *Journal abstract.*

Discusses problems in bridging gaps between learning research and instructional development by considering the relevance of the premises of learning theory and identifying some promising directions that draw on the concepts of cybernetics and information processing. (42 ref.)—*HumRRO.*

10120. Smith, Karl U. & Kao, Henry. (U. Wisconsin Behavioral Cybernetics Lab.) **Social feedback: Determination of social learning.** *Journal of Nervous & Mental Disease*, 1971(Apr), Vol. 152(4), 289-297. Studied social learning by cross-yoking the behavior of 2 individuals in a manual-visual tracking task so that both persons received an immediate combined or systems error feedback of their socially coordinated movements. A laboratory real-time computer system was used to combine the movement-controlled sensory signals of the 2 Ss in controlling the combined visual error display. The computer system generated a variable sine wave target for which the 2 Ss had to compensate by coordinate hand motions. Results on 10 2-person groups showed that the interactive systems error was effective in producing progressive and significant learning in social tracking. Results suggest that systems sensory feedback factors of interactive movements rather than discrete stimulus response and reinforcing rewards operate as the primary determinants of social guidance and learning. (24 ref.) *Journal abstract.*

10122. Turner, Keith D. & Lippman, Louis G. (U. Washington) **Serial isolation effect as a function of instructions and stimulus intensity.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 85(1), 107-114. Groups of 18 Ss anticipated a 12-CVC list for 40 trials. The groups were informed that an auditory isolation effect might be presented, the 7th position was isolated, and groups by either a high or low intensity tone. The magnitude of the isolation effect was found to be a direct function of the intensity of the isolating stimulus. Facilitated total-list performance for the high intensity group only, indicating that an intense isolating stimulus plus information about the occurrence of that stimulus was a sufficient condition to facilitate total list performance.—*Author abstract.*

Conditioning

10123. Bobbitt, Robert C. & Beck, Robert C. (U. State U.) **Semantic differential judgments of single and multiple conditioned stimuli with an aversive delay conditioning paradigm.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 107-114. Studied semantic differential judgments of single and multiple conditioned stimuli with an aversive delay conditioning paradigm. (16 ref.)—*Journal abstract.*

Psychology, 1971(Aug), Vol. 89(2), 398-402.—Studied the responses of 76 male and 52 female undergraduates in 8 groups receiving (a) a single light CS of 1, 3, 9, or 27 sec. terminating with the onset of a 4-sec shock; or (b) the same CSs with an additional 1-sec different color light CS following shock offset. Ss rated the CS(s) on the semantic differential (SD) before and after 12 conditioning trials. Onset and offset of the delay CSs were rated separately; the "backward CS" was rated as a unity. Results indicate that (a) as duration of the delay CS increased, onset was judged less aversive, active, and potent on the SD while offset became more aversive, active, and potent; (b) the addition to the backward CS significantly exaggerated the overall ratings of the delay CSs; and (c) the backward CS itself was judged to change in the direction of being equally good, weak, and passive at all CS delays.—*Journal abstract*.

10125. Brotsky, S. Joyce & Keller, William H. (San Fernando Valley State Coll.) **Semantic conditioning and generalization of the galvanic skin response: Locus of mediation in classical conditioning.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 383-389.—Established semantic conditioning of GSR through the auditory presentation of neutral words with 10 interspersed CS-UCS pairings. 24 male and 24 female undergraduates were trained with 1 of 3 sub- or superordinates as the CS and tested for semantic generalization on the related sub- or superordinate. The UCS, 1 sec. of white noise, followed the CS by 10 sec. Although semantic generalization was demonstrated in all groups, Ss trained on the superordinate showed more semantic generalization than Ss trained on the subordinate. Results support the hypothesis that the test phase is the primary locus of mediation when the classical conditioning paradigm is used.—*Journal abstract*.

10127. Coffman, Maryrose & Kimmel, H. D. (U. South Florida) **Instrumental conditioning of the GSR: A comparison of light deprivation and monotony hypotheses.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 410-413.—Assigned 60 undergraduates to 4 groups for different types of reinforcement of elicited GSRs. Reinforcement was a dim white light (on or off for 3.2 sec.) delivered contingent upon responses or nonresponding. All Ss had 10 min. of preacquisition, 25 min. of acquisition, and 15 min. of extinction. The effect of contingency was significant in both groups during acquisition and extinction. The contingent light-on group responded more frequently than the contingent light-off group during acquisition. It is concluded that reinforcement is effective by relieving the monotony of unchanging stimulus conditions, and that the extent of this effect may depend upon the arousal level or the operant rate of S.—*Journal abstract*.

10128. Drews, David R. (U. Delaware) **Some determinants of the effects of preface conditioning on the acquisition of an avoidance response.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6283-6284.

Psychological Review, 1969(Jul), Vol. 6(1), 1-3.—Reviews studies on salivary conditioning in relation to individual difference variables. Recent works using adequate control and accurate continuous recording devices have shown salivary conditioning. Inter-S variability is an important feature of this conditioning. Uses of salivary conditioning in personality research are stressed.—K. C. Panda.

10130. Furedy, John J. & Doob, Anthony N. (U. Toronto, Ontario, Canada) **Autonomic responses and verbal reports in further tests of the preparatory-adaptive-response interpretation of reinforcement.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 258-264. Differentially conditioned 2 groups of 8 male and 8 female high school students in each of 3 experiments with light and tone as CSs, shock as UCS, a 5-sec CS-UCS interval, and GSR and digital volume pulse change as autonomic responses. The trial series included interpolated UCS-alone trials. UCS intensity was held constant within Ss to test the regression, aversiveness, and preference hypotheses derived from the preparatory-adaptive-response (PAR) interpretation of reinforcement. The disconfirmation of all 3 hypotheses, together with the earlier disconfirmations by J. Furedy and A. Doob (see PA, Vol. 46:Issue 6) with varied within-Ss UCS-intensity arrangements, further weakens the PAR interpretation. *Journal abstract*.

10131. Furedy, John J. & Doob, Anthony N. (U. Toronto, Ontario, Canada) **Classical aversive conditioning of human digital volume-pulse change and tests of the preparatory-adaptive-response interpretation of reinforcement.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 403-407.—Differentially conditioned 24 male and 24 female high school students with light and tone as 8-sec CSs and shock (occurring at CS+ offset) as UCS. The trial series included interpolated UCS-alone trials, and both UCS intensity (1.5, 2, and 2.5 ma) and duration (.3, .8, and 2 sec.) were varied within Ss. 3 hypotheses derived from the preparatory-adaptive-response (PAR) interpretation were tested: (a) the anticipatory conditional volume-pulse change is negatively related to the rated aversiveness of the immediately following shock; (b) signaled shocks are rated as less aversive than unsignaled shocks; and (c) signaled shocks are preferred over unsignaled shocks. Experimentally internal checks on the adequacy of the tests of these hypotheses were positive, but the hypotheses, and hence the PAR interpretation, were not supported.—*Journal abstract*.

10145. Nelson, Thomas O. (U. Washington) **Extinction, delay, and partial-reinforcement effects in paired-associate learning.** *Cognitive Psychology*, 1971(Apr), Vol. 2(2), 212-228.—Presents a theoretical framework for comparing human paired-associate learning with animal instrumental learning. The informational aspects of reinforcement are emphasized and reinforcement is considered to be an internal event which derives from, but is not necessarily isomorphic with, E's feedback to S. 3 experiments are reported which demonstrate extinction, delay of reinforcement, and partial-reinforcement effects in paired-associate learning. (25 ref.)—*Journal summary*.

10146. Schlottmann, Robert S. & Dachowski, Lawrence. (Oklahoma State U.) **Retroaction, intrusions, and group paired-associate learning.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 137-143.—Studied retroactive interference effects in group paired-associate learning in undergraduates. Original learning for all groups consisted of practice on stimulus-response, (S-R) pairs from cultural free-association norms. Interpolated learning consisted of either S-R₁, S-R₂, or S-R₃ pairs, or a vowel cancellation task. Rate of performance in relearning showed significant retroactive-inhibition effects. Test trials interpolated during relearning showed intrusions which varied systematically with interpolated learning treatment. Suggestions are offered for facilitating the study of intrusions in a retroactive-inhibition paradigm.—*Author abstract*.

10147. Smallwood, Richard D. (Stanford U.) **The analysis of economic teaching strategies for a simple learning model.** *Journal of Mathematical Psychology*, 1971(May), Vol. 8(2), 285-301.—Formulates in economic terms the decision problem for teaching a list of paired associate items. The analysis assumes that learning behavior for each item is described by the 1-element model with parameters that can depend on both the student and the item. A dynamic programming formulation for the decision problem is developed that accounts for the cost of instruction and the cost of terminating the instruction in the unconditioned state. This formulation considers 3 alternatives at each decision: present the item with no elicited response, present the item and observe the students' response, and terminate instruction for the item. It is proved that the optimum policy for a multitem list can be calculated by considering each item individually and then aggregating the individual results into a total policy. Also, an algorithm for calculating the optimum policy for each item is derived. The algorithm is simple enough so that the optimum policy can be calculated by hand. 2 examples illustrate the application of the algorithm.—*Journal abstract*.

10148. Wearing, Alexander J. (Yale U.) **On the Adams-Bray retrieval model.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 96-101.—Reviews assumptions underlying the conventional theory of response retrieval in paired-associate (PA) learning. Some alternative formulations, including that of Adams and N. Bray (see PA, Vol. 45:1703), are presented. A PA learning experiment bearing on the theories was conducted with 61 female undergraduates. Results indicate that (a) response monitoring and comparison occurred, (b) subjective judgments related meaningfully to other variables, (c) latency was a function of response correctness and was closely related to confidence judgments and response perceptual trace strength, and (d) response criterion was a complex function of the other variables involved in retrieval. Provisional support for the Adams and Bray position is indicated. (21 ref.)—*Journal abstract*.

Reinforcement

10150. Guthrie, John T. (Johns Hopkins U., Center for Social Organization of Schools) **Motivational effects of feedback in reading.** *Center for Social Organization of Schools Report, Johns Hopkins U.*, 1970(Jul), No. 74, p.—Investigated the effects of feedback on motivation and learning in a 3×3 factorial design. 72 male undergraduates read prose sentences and completed cloze test items. Feedback on each sentence and retention tests over the sentences were either immediate, delayed, or omitted. Ss were then given a continuation of the original passage to read for as long as they wished as a measure of perseverance and motivation. Results indicate that (a) delayed feedback produced significantly ($p < .05$) more learning on the task than immediate feedback, (b) immediate feedback produced significantly ($p < .01$) more perseverance on the continuation passage than delayed feedback, and (c) perseverance was positively correlated (.46) with scores on a comprehension test over the continuation passage. Results are explained in terms of differential affective responses acquired to the reading task under the different feedback conditions.—*Journal abstract*.

10153. Newberry, Benjamin H. (Kent State U.) **Response variability and the partial reinforcement effect.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 137-141.—Gave 120 male and 120 female undergraduates acquisition and extinction in an instrumental task with 4 manipulanda of which any 1 could be operated on each trial. The 4 switches produced 16 different response transitions of which 8 were defined as correct. It was found that under partial reinforcement more different correct transitions were learned than under continuous reinforcement. Continuous reinforcement produced more emissions of learned transitions.

during acquisition and fewer emissions during extinction than did partial reinforcement. Reinforcement rate did not significantly affect the number of times each learned response was emitted in extinction. It is suggested that response variability could account for the partial reinforcement effect in situations in which response variability has not been assessed.—*Journal abstract.*

10154. Sallows, Glen O., Dawes, Robyn M., & Lichtenstein, Edward. (U. Oregon) **Subjective value of the reinforcer (RSv) and performance: Crux of the S-R versus cognitive mediation controversy.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 274-281.—Examined the effect of subjective value of the reinforcer (RSv) on performance in a sentence-construction, verbal conditioning task. 60 undergraduate males were randomly assigned to positive or negative reinforcement groups in which they were reinforced following sentences beginning with designated pronouns. After each sentence, Ss rated the pleasantness of the reinforcer or of E's silence. Awareness of the pronoun-reinforcement contingency was assessed by (a) a post-conditioning interview, (b) written thoughts about the experiment, (c) a simple recognition question, and (d) a new card-sort technique. Using the most defensible criterion of awareness, only aware Ss who rated the reinforcer as more pleasant than silence showed significant performance change. Performance of unaware Ss was unaffected by the value of RSv. It is concluded that the effect of RSv on performance was mediated by awareness of the correct response-reinforcement contingency. (18 ref.)—*Journal abstract.*

10155. Sanders, Richard M. (Southern Illinois U.) **Two parameters of human discrimination learning.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 747-753. —Tested 115 female undergraduates to determine the number of trials required to learn a concept-identification task. An analysis was made based on a notational system which associated stimulus elements of the task with reinforcement (S), with nonreinforcement (N), or with reinforcement (S), with nonreinforcement (N). Whereas increases in the number of 1-type stimulus elements in a task (associated randomly with reinforcement and nonreinforcement) made little difference in the number of training trials required to reach task mastery, a slight increase in the number of S and N stimulus elements (associated systematically with reinforcement or nonreinforcement) produced a very great increase in the number of trials required to master the task. *Journal abstract.*

MEMORY

A., et al. **Psikhologicheskii v mekhanizmy pamyati i ee zakonomernosti v protsesse obucheniya: Materialy i vnesoyuznogo simposiuma po psikhologii pamyati.** [Psychological mechanisms of memory and their regularity during the instruction process: Material from the All-Union symposium on the psychology of memory.] Kharkov, USSR: Kharkov U., 1970. 264 p. 75 K.

10157. Bahrick, Harry P. (Ohio Wesleyan U.) **Accessibility and availability of retrieval cues in the retention of a categorized list.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 117-125. Presented in blocked or random form a categorized word list with high-, medium-, and low-frequency members to 160 undergraduates. Free recall tests were followed by category-cued recall or by recognition tests. Access-

bility, the probability that the cue itself can be retrieved in the context of a particular recall situation, and availability, the probability that the cue will be retrieved of the to-be-remembered item, were measured. It was found that (a) in free recall, accessibility and availability jointly determined the effect of frequency, and (b) in prompted recall, only availability was necessary. The prompted recall task was analyzed in a 2-phase model stipulating independent accessibility and recognition processes. It is concluded that the sequence in prompted recall is primarily determined by permanent organization of the verbal store, the effects produced by blocked presentation of items increase a prior retrieval probability. (15 ref.)—*Journal abstract.*

10158. Bell, Jerald A. & Shapiro, S. L. (U. Hawaii) **A normative study of organizational strategies in free recall learning.** *Psychonomic Monographs*, 1971, Vol. 4(1), 1-32. Examined the effects of organizational strategies on free recall of 16 unrelated words. Ss were divided into two groups: one recalled 1 of 48 lists of 16 unrelated words of high or mixed word frequencies. Recall was significantly better than for low-word-frequency lists. The effects of organizational strategies were found to be significant. Analyses of the kinds of organizational strategies employed and their frequency of use were reported. Evidence that some subjects used organizational strategies frequently and should be analyzed as such is presented. (ref.)—*Journal abstract.*

10163. Ehrlich, S. & Ricateau, M. (U. Poitiers, Faculty of Letters & Human Sciences, France) **Le rôle de la structuration dans la rétention verbale.** [The role of structuration in verbal retention.] *Année Psychologique*, 1970, Vol. 70(1), 95-108. —3 groups learned a list of 20 words and were given a free-recall test. Immediately following acquisition, a disorganized learning trial was given to Group A and an organized learning trial to Group C; Ss in Group B were given no learning trial of any sort. After 15 days, Ss were given 10 consecutive recall trials, without original stimuli. Recall was greater for Group C than B. Only $\frac{1}{2}$ the Ss in Group A recalled less than Group B. These results are interpreted in terms of transitory dominances existing within the verbal repertory which determine learning and permanent dominances which determine long-term retention.—G. Rubin-Rabson.
10164. Fergenson, P. Everett & Telchner, Warren H. (Stevens Inst. of Technology) **Short-long-term memory interaction with underlearned long-term storage.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 51-61.—24 male and 24 female Ss were divided into 6 groups containing an equal number of each sex. Ss were taught the 1st 26 characters of the Russian alphabet in their proper sequence. Ss then reported the contents of a series of 144 briefly exposed slides which contained letter sequences with gaps in alphabetic, but not physical, sequence. The number of gaps per slide and the number of letters missing per slide were varied in the same way for each group. Each group was assigned to 1 cell of a 2×3 factorial design where the variables were base rate (.5%, 1%, or 5% prize for best performance) and ratio of high half to low half of sequence (2:1 or 4:1). Data were analyzed with respect to correct response and 2 types of false-alarm reports.—Author abstract.
10165. Fisher, Dennis F. **Word recall and clustering as a function of delay interval, list type and sorting technique.** *U.S. Army Human Engineering Laboratories Technical Memorandum*, 1970(May), No. 12-70, 49 p.—Tested the hypothesis that amount recalled and clustering, occurrence of related words in strings of 2 or more, are inversely related to the delayed recall interval. The experimental manipulations employed were list type—categorized and random, card sorting technique—free or constrained, and delay interval—1, 2, 5, and 24 hr., and 1 wk. Results indicate that the amount and number of clusters recalled decreased with increases in the delay interval. However, word frequency, degree of clustering, and cluster size were not affected. Ss were 249 senior psychology students from 3 different high schools. The categorized list group recalled more words, had the greatest degree of clustering, and formed larger clusters than the random list group. The free-sort group recalled more words and used more clusters than the constrained-sort group. The constrained-sort group formed larger clusters than the free-sort group. Sorting technique was not seen as a factor in determining the degree of clustering. Results are interpreted as supporting G. A. Miller's coding hypothesis about superordinate and subordinate labels. The nature of the categorization was not found to be exclusively organizational or associational. A relationship between organization and amount recalled was substantiated. 10167. Johnston, Carroll D. & Jenkins, James J. (U. Minnesota) **Two more incidental tasks that differentially affect associative clustering in recall.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 92-95. Presented a word list comprised of pairs of highly associated words in the same random order to 5 groups of undergraduates (N = 158). Groups 1 and 2 were told to write a rhyming word, Groups 3 and 4 wrote appropriate modifiers or nouns, and Group 5 (control) simply "took dictation." Groups 2, 4, and 5 were prewarned of the recall task, while Groups 1 and 3 were not. All groups were required to recall the stimulus words immediately after the list presentation. Both associative clustering and amount of recall were significantly greater for Groups 3, 4, and 5 than for either rhyming group. It is concluded that the rhyming task inhibited the assignment of meaning to words by Ss, thereby reducing the amount of clustering and recall.—*Journal abstract*.

10172. Rundus, Dewey. (Rockefeller U.) **Analysis of rehearsal processes in free recall.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 63-77.—Conducted 4 experiments with female undergraduates in which overt rehearsal was required during the presentation of free recall lists. This rehearsal was tape-recorded and analyzed in conjunction with written recall data. In Exp. I lists of unrelated nouns were presented to 25 Ss. The serial position effect, the order of recall of items as a function of item strength, and the organization of list items were examined using rehearsal and recall protocols. The introduction of distinctive items into a free recall list affected recall of the distinctive item, items adjacent to distinctive items, and the list as a whole. Exp. II with 15 Ss examined changes in rehearsal associated with these recall effects. In Exp. III with 11 Ss, some items of a list were repeated. Recall of repeated items increased with spacing of the repetitions. 20 Ss were tested with lists containing both categorized and unrelated items in Exp. IV. Category information was used extensively by Ss in structuring rehearsal. Clustering in recall was related to the observed rehearsal protocols. (30 ref.)—*Journal abstract*.

10178. Shebilske, Wayne; Wilder, Lucinda, & Epstein, William. (U. Wisconsin) **Forget instructions: Effect of selective rehearsal and categorical distinctiveness.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 372-378.—Examined the “only effect” in which recall of to-be-remembered (TBR) items is higher when S is instructed to forget part of the list than when he is responsible for the whole list. Lists of 4 pairs, subdivided in sets of 2 pairs, were presented to 192 undergraduates with instructions to learn all items. 1 pair was tested after each list. Between list presentation and the recall test, S was cued on $\frac{1}{2}$ the trials that he would be responsible for only the 1st or only the 2nd set. On the remaining trials, the cue told S that he would be responsible for all 4 pairs. The use of categorized and uncategorized lists either permitted or inhibited rehearsal. It was found that differential rehearsal of TBR and to-be-forgotten items was not necessary for the only effect, and that the only effect was greater when the sets of pairs were categorized. Results are discussed in terms of the possible mechanisms underlying the effect of forget instructions.—*Journal abstract.*

10182. Weber, Robert J. & Blagowski, Jim D. (Oklahoma State U.) **Metered memory search and concurrent chanting.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 162-170.—Studied the performance of 8 wives of graduate students on metered memory search and emissive chanting, done separately and concurrently. When writing was used as the response mode in metered memory search and speaking as the response mode in chanting, the memory search rate under concurrent conditions was about the same as for metered memory search done alone. Evidence concerning intercept values indicated that chanting slightly increased the time spent on processes other than

scanning. An effect due to compatibility of the memory search and chant tasks was found, indicating that even a written chant drew on some form of verbal trace system. Results are interpreted as support for the existence of an abstract verbal scanning system distinct from visual image or ordinary implicit speech representation (16 ref.).—*Journal abstract.*

10184. Woodward, Addison E. & Bjork, Robert A. (Albion Coll.) **Forgetting and remembering in free recall: Intentional and unintentional.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 109-116.—Designed 2 free recall experiments with 16 and 40 undergraduates to study the processes by which Ss remember some items and forget others. In both experiments, Ss were cued immediately after each word in a list whether to remember (R) or to forget (F) that word. After each of 6 such lists, Ss were asked to recall the R words and to avoid recalling the F words. In general, Ss were remarkably able to do both. At the end of the experiment, Ss were asked, without forewarning, to recall any and all R and F words they could remember. Final recall of F words from lists of 16 words was very poor, while recall from categorized nouns was very good, given that there were R words in the same semantic category. Results suggest that the difference between rehearsal devoted to R words operates primarily on retrieval rather than on storage (12 ref.).—*Journal abstract.*

Short Term & Immediate Memory

10185. Abramczyk, Rudolf R. (Veterans Administration Hosp., West Haven, Conn.) **Clustering and sequential ordering in multitrial free recall as a function of meaningfulness.** *Psychonomic Bulletin & Review*, 1971(Jun), Vol. 28(3), 783-793.—Investigated the effect of meaningfulness on the recall of 15-item CVC lists by 15 undergraduates to learn a 15-item CVC list representing 15 categories of meaningfulness (M) for 15-item CVC lists. presentation-free-recall trials under conditions of immediate (I), or delayed (D) recall. In the D condition, a 30-sec task-filled interval preceded each trial. Substantial organization in recall was observed in the I condition, and sequential order was observed in the D condition. Recall was higher and more consistent in the D than in the I condition. The most prominent in controlling recall strategies and performance differences were attributed to the greater use of clustering in short-term recall strategies. The results suggest that discriminating the M of a CVC list is a function of its associative hierarchy and of the nature of the word. (27 ref.)—*Journal abstract.*

10186. Baddeley, A. D. & Levy, Betty A. (Brighton, England) **Semantic coding and short-term memory.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 132-136.—Examined the suggestion that the absence of semantic organization effects in most short-term memory studies is due to the use of words that are semantically unrelated. The effect of semantic similarity on minimal paired-associate learning was examined. Results showed that semantic similarity (e.g., priest-deacon) or non-adjacent pairs (e.g., priest-deacon) were not as compatible as adjacent pairs (e.g., priest-deacon).

was examined in 56 undergraduates. An adverse effect of similarity was found for compatible but not for incompatible pairs. Serial recall and attempts to distinguish primary and secondary memory components by comparing immediate recall with recall after a 20-sec distractor task were studied in 24 undergraduates. The semantic-similarity decrement again occurred with compatible lists, but only after delay. This result suggests that semantic coding was limited to secondary memory. (15 ref.)—*Journal abstract.*

10187. Block, Richard A. (U. Oregon) **Effects of instructions to forget in short-term memory.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 1-9.—Conducted 2 short-term memory experiments with 24 and 20 paid volunteers. In Exp. I, proactive interference (PI) was reduced when Ss were cued to forget the 1st of 2 trigrams; but there was no reduction in retroactive interference when Ss were cued to forget the 2nd. The residual amount of PI depended upon the acoustic similarity of the 2 trigrams. In Exp. II, PI was reduced when Ss were cued to forget the 1st 6 words in a 12-word sequence. A subsequent recognition test, however, showed that the to-be-forgotten words were recognized as often as words taken from sequences with no forget cue. Results support a hypothesis that the effects of a forget cue are due to differential storage and retrieval of to-be-remembered and to-be-forgotten items.—*Journal abstract.*

10188. Butterfield, Earl C. & Belmont, John M. (U. Kansas, Medical Center, Kansas City) **Relations of storage and retrieval strategies as short-term memory processes.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 319-328.—Performed 6 experiments with high school, medical school, and undergraduate students (N = 61) to explore relations between storage and retrieval in a short-term memory task. Storage was indexed by measuring pauses following item exposure in an S-paced serial task, and retrieval was indexed by plotting correct response latency against ordinal presentation position. Data show that retrieval varied systematically with type of storage strategy. Active rehearsal led to slow retrieval which varied directly with ordinal position and number of items learned. Passive attention led to rapid retrieval which varied with the number of items learned but not with ordinal position.—*Journal abstract.*

10192. Dornić, Stanislav; Bratfisch, Oswald, & Santesson, Anna. (U. Stockholm) **Verbal factor in immediate memory.** *Reports from the Institute of Applied Psychology, U. Stockholm*, 1970, No. 14, 10 p.—Messages consisting of increasing number of digits were presented acoustically at a rate of 1 digit/.75 sec. In the 1st condition (forward recall), Ss recalled the messages in the original order; in the other condition (backward recall), Ss recalled the digits in the reversed order. 13

Swedish Ss with a fluent knowledge of English were used. The messages were presented both in the Ss' mother tongue and in English. Data obtained show the recall to be significantly better with messages presented in the Ss' dominant language, the difference being greater regarding the criterion of "order information" than that of "item information." Results are interpreted in terms of differences in coding capacity between the dominant and nondominant languages. (27 ref.)—*Journal abstract.*

10193. Ellis, Norman R., et al. (U. Alabama, Center for Developmental & Learning Disorders) **Amnesia effects in short-term memory.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 357-361.—Produced the von Restorff effect in a free recall experiment with 68 undergraduates by the interpolation of a photograph of nude human beings at Serial Position 8 in a 15-item list consisting of line drawings of familiar objects. This effect was accompanied by a retrograde amnesia at the 2 serial positions immediately preceding the interpolated item. A substantial anterograde amnesia resulted from the nude photograph, affecting the 6 following positions. A 2nd study presented 4 classes of 108-161 undergraduates with a recognition task. Lists of 30 photographs from popular magazines were shown at .75-sec or 1.50-sec rates, and recognition memory for 12 of the positions was probed by presenting 12 old and 12 new pictures on a "test" trial. Photographs of nudes were interpolated at Serial Position 15. A profound anterograde amnesia resulted, with the effect being greater for the .75-sec rate. No retrograde amnesia resulted.—*Journal abstract.*

The primary effect depended on a more stable consolidation of mnemonic traces than the recency effect. Word associations only partially accounted for the primacy effect; backward contiguous associations were more numerous than forward associations; however, the latter were more often given as responses in probed recall. Learning in the correct order developed the primacy effect and reduced the recency effect; with increasing trials, recency gained in strength. (35 ref.)—*G. Rubin-Rabson.*

10208. Staudenmayer, Herman & Schvaneveldt, Roger W. (Graduate Research Center, City U. New York) **Instructions and stimulus properties in processing relevant-redundant information.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 175-180.—Studied the effects of instructions, discriminability, and redundancy in a constrained-classification task with multidimensional stimuli. 80 male and 80 female undergraduates were run in 1 of 10 conditions, each of which consisted of training, overtraining, and conflict. Mean RT in overtraining for instructed relevant-redundant dimensions was faster than either component dimension alone only when both dimensions were highly discriminable. Similar trends were found for conditions with an added noninstructed relevant-redundant dimension, lending support to a parallel, self-terminating model of information processing. However, results in the conflict phase and in conditions with dimensions unequal in discriminability were not consistent with the model. When 1 dimension was difficult to discriminate, mean RT for the instructed relevant-redundant dimension condition fell between mean RT for the fast and slow dimensions, which implies serial, self-terminating processing.—*Journal abstract*.

10211. Krković, Anđelko & Kolesarić, Vladimir. (Inst. of Psychology, Faculty of Philosophy, Zagreb, Yugoslavia) **Prikaz novog testa za ispitivanje osjetljivosti za probleme.** ["Problem Test": Instrument for measuring sensitivity for problems.] *Revija za Psihologiju*, 1970, Vol. 1(2), 73-78.—Describes Z. Bujas "Problem Test," a 70-item instrument designed to measure sensitivity to problems. Every item presents a

different problem situation. Nothing is told to the S about the nature of problems so that the S by himself has to find the problem. The solutions are easy to find after the understanding of the problem situation. Metric characteristics and correlation coefficients with some traditional measures of intelligence are given. (English abstract)—*A. Fulgosi*.

10212. Parkman, John M. & Groen, Guy J. (Carnegie-Mellon U.) **Temporal aspects of simple addition and comparison.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 335-342.—Presented 4 male and 2 female undergraduates in 5 sessions with series of simple addition problems of the form $p + q = nn$. Ss were asked to respond rapidly whether the solution given with each problem (nn) was correct or not. On $1/2$ the trials, the presented solution equalled the true sum, and on the remaining trials, the presented solution differed from the true sum by not more than 2. Additive addition-stage and comparison-stage RT effects were found for correct responses. For the addition stage, latencies increased linearly as a function of the minimum addend and also as a function of the sum. For the comparison stage, negative responses had longer latencies than positive responses.—*Journal abstract*.

Concepts

10213. Borich, Gary D. (Indiana U.) **Learning and transfer in concept identification as a function of concept rule, saliency, and stimulus variety.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6918-6919.

10214. Bower, Archibald C. (U. Alberta, Edmonton, Canada) **Some transfer effects among conceptual rules.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 407-410.—Examined biconditional (BC) rule training effects and the effects of experience with the inclusive-disjunction (ID) and joint-denial (JD) rules upon BC rule learning. 112 undergraduates were assigned to 7 groups which (a) received BC training and then solved either ID or JD problems, (b) solved ID problems, (c) solved JD problems, (d) solved BC problems after solving JD or ID problems, and (e) worked on BC problems alone. BC pretraining was most helpful with the JD rule. Only the joint denial pretraining facilitated performance on BC problems. When the 3 rules were compared in difficulty, the BC was hardest, followed by the JD and the ID. Transfer effects were related to the development of a "truth-table" strategy and to increased familiarity with the way in which the rules assign stimuli to response classes.—*Journal abstract*.

10215. Eifermann, Rivka R. & Steinitz, Ruth. (Hebrew U., Jerusalem, Israel) **A comparison of conjunctive and disjunctive concept identification.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 29-37.—50 undergraduates were assigned to 4 groups: conjunctive and disjunctive number and form problems. The comparison showed that (a) after initial learning, tasks of identifying disjunctive concepts were no more difficult to accomplish than corresponding tasks for conjunctive concepts; and (b) the experimental task was approached and treated by the Ss as a kind of puzzle, in which rules of a new game had to be mastered rather than as a task similar to that of formation and acquisition of concepts, familiar from everyday life.—*Author abstract*.

10226. Williams, Gloria F. (Los Angeles County Dept. of Mental Health, Calif.) **A model memory in concept learning.** *Cognitive Psychology*, 1971(Apr), Vol. 2(2), 158-184. —A concept learning model was developed and tested in 2 conjunctive attribute identification tasks. The model includes assumptions about the focus of attention, decision making, and memory for stimulus information and prior decisions. Predictions are made about how S changes his hypothesis following an error. Procedures in both tasks allowed inference of the S's current hypothesis. Selections and error statistics for the hypothesis were in the majority of cases accurately predicted by the model. Deviations from predictions on hypothesis sampling occurred for naive Ss but not for trained Ss who were required to state a hypothesis on each trial. (31 ref.)—*Journal summary.*

DECISION & CHOICE BEHAVIOR

10228. Barrett, Helen R. (Southern Illinois U.) **The effect of payoffs and prior probabilities on decision-making about normally distributed populations.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6274-6275.

10229. Fischer, Gloria J. (Washington State U.) **Number of event choices and the difference between event probabilities in human probability learning.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 192-196. —Examined the finding that multiple-event tasks in human probability learning result in more predictions of the most frequently occurring event, $p(A_1)$, than occur with 2-event tasks. Findings from 3 experiments with 192 undergraduates indicate that this effect was not dependent upon the method used, but may be dependent on the use of a large number of trials S were given 300 contingent probability learning trials on a 2- or 4-event task, with a difference of .4 or .6 between the probabilities of occurrence of the most and less frequent event(s). Asymptotic $p(A_1)$ was lower for the greater number of events, but higher for the greater difference between event probabilities. It is concluded that the so-called multiple-event effect is more likely due to an increase in the difference between event probabilities that necessarily accompanies an increase in the number of events such that the sum of event probabilities equals 1 (e.g., 70:30 vs. 70:10:10:10).—*Journal abstract.*

10230. Halpern, Joseph & Poon, Leonard. (U. Denver) **Human partial reinforcement extinction effects: An information processing development from Capaldi's sequential theory.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 207-227. —Designed a series of experiments to evaluate the applicability of E. Capaldi's sequential hypothesis to human partial reinforcement-extinction effects (PREEs). A total of 330 undergraduates was required to make a decision about whether or not to gamble on an uncertain outcome. 5 experiments were designed (a) to determine whether the experimental context would result in a usual PREE, (b) to evaluate memory trace assumptions via the use of intertrial reinforcements, and (c) to evaluate assumptions con-

cerning the effects of patterns of reinforcements and nonreinforcements on the PREE. Results are interpreted as being in general agreement with predictions from sequential theory. It is suggested that human choice behavior can be best described as a situation where Ss process information for the purpose of developing sequential response strategies. (26 ref.)—*Journal abstract.*

10231. Howell, William C. (Rice U.) **Uncertainty from internal and external sources: A clear case of overconfidence.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 240-243. —Hypothesized that if, as earlier work suggests, people tend to be overconfident of uncertain outcomes which depend on their own performance, they should show a preference for situations in which the total uncertainty is more internal (I) or skill-based than external (E) or environment-based. The I-E composition of objectively equiprobable choice alternatives in a paired-comparisons paradigm was manipulated. Each alternative included a specified criterion on a dart-throwing task (I component) and a specified zone on a probability spinner. 15 undergraduates, trained to a stable dart-throwing level under 1 of 3 different set conditions, made a series of choices at 3 overall uncertainty levels. Neither variable modified the chief result, which was a clear-cut verification of the hypothesis (87% of all choices were in the predicted direction). Scaled preference values for the various I-E mixtures were generally as expected, except that "psychological distances" were disproportionately large under the highest level of overall certainty.—*Journal abstract.*

10235. Lichtenstein, Sarah & Slovic, Paul. (Oregon Research Inst., Eugene) **Reversals of preference between bids and choices in gambling decisions.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 46-55. —Conducted 3 experiments in which undergraduate males ($N = 261$) chose their preferred bet from pairs of bets and later bid for each bet separately. In each pair, 1 bet had a higher probability of winning (P bet); the other offered more to win (\$ bet). Bidding method (selling vs. buying) and payoff method (real-play vs. hourly wage) were varied. Results show that when the P bet was chosen, the \$ bet often received a higher bid. It is concluded that these inconsistencies violate every risky decision model, but can be understood via information-processing considerations. In bidding, S starts with amount to win and adjusts it downward to account for other attributes of the bet. In choosing, there is no natural starting point: amount to win dominates bids but not choices. *Journal abstract.*

10236. Lindman, Harold R. (Indiana U.) **Inconsistent preferences among gamblers.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 390-

397.—Conducted 5 decision-making experiments with a total of 119 undergraduates. It was found that Ss, when choosing among gambles, tended to prefer gambles with high probabilities of winning. The same Ss, when naming selling prices, preferred gambles with small probabilities of winning larger amounts. Results generally support those found by P. Slovic and S. Lichtenstein (see PA, Vol. 43:2036) in a previous study. Contextual factors that might have contributed to this inconsistency were eliminated in the series of experiments. Changes in preferences over trials were found which fit a hypothesis of learning through simple reinforcement.—*Journal abstract.*

Compared the "psychophysics of gambling" model, in which a person is assumed to have a single-peaked or monotonic preference function on each of the primary psychological dimensions of a gamble, to the expected utility model for 2-outcome gambles. 2 theorems are proved, the 1st of which shows that expected utility (EU) theory is inconsistent with single-peaked preference functions on both skewness and variance, while the 2nd shows that subjectively-expected utility (SEU) theory is inconsistent with single-peaked preference functions on both skewness and range. The applicability of the theorems is discussed and a weak test of SEU theory is made employing the 2nd theorem. —Journal abstract.

10239. Schmitt, David R. (U. Washington) **Effects of intermittent reinforcing consequences on task choice.** *Psychological Reports*, 1971(Jun). Vol. 28(3), 771-776.—Explored the effects of supplementary reinforcement on 1 of 2 tasks as an element determining task choice. In an experimental setting, work on the lower paying of 2 concurrent operants received additional reinforcement on either a fixed or variable interval schedule. A wide range of addition magnitudes were studied under each schedule. Results from 8 female undergraduates indicate that addition magnitude significantly affected task choice only when additions were available at unequal intervals. Under this schedule the higher the additions the greater the time spent on the lower paying task. The fixed interval schedule produced a small amount of time on the lower paying task regardless of addition magnitude. These findings and those from a previous study suggest that additions and penalties when applied to opposing tasks in a concurrent setting have similar effects on patterns of task choice.

10241. Yellott, John I. (U. Minnesota) **Correction for fast guessing and the speed-accuracy tradeoff in choice reaction time.** *Journal of Mathematical Psychology*, 1971(May), Vol. 8(2), 159-199.—In choice RT tasks, response latency varies as the S changes his bias for speed vs. accuracy; this is the speed-accuracy tradeoff. Ollman's fast guess model provides a mechan-

nism for this tradeoff by allowing the S to vary the probability of making a guess response rather than a stimulus controlled response (SCR). It is shown that the mean latency of SCR's (μ) in 2 choice experiments can be estimated from a single session regardless of how the S adjusts his guessing probability. Experiments with 10 Ss are reported in which μ apparently varied with the constant despite tradeoffs in which accuracy varied from chance to near-perfect. In the context of the fast Guess model, this result is interpreted to mean that the tradeoff here was produced almost entirely by varying different proportions of fast guesses (rather than by varying latency SCR's. The question of what other processes may be compatible with μ invariance is also discussed.

10257. Smialowski, A. (Jagellonian U., Kraków, Poland) **Studies on the hypothalamus of the dog: II. Intermediate (tuberal) part.** *Acta Biologica Experimentalis*, 1968, Vol. 28(2), 121-144.—Describes the topography and connections of nuclei of the intermediate part of the dog's hypothalamus, based mainly on a series of 8 myelin sections from the brain of the dog, stained by the Weigert-Wolters method. The intermediate part of the hypothalamus is situated between the anterior part of this structure frontally and the mammillary bodies caudally. The following areas have been described in the intermediate part: the ventrolateral, dorsomedial, dorsocaudal, dorsal, infundibular, posterior lateral, posterior supraoptic, ventrolateral, and

tubermammillary nuclei as well as the periventricular area. These areas were distinguished in the hypothalamus of most other animals with the exception of the ventrolateral nucleus, which was reported only from a few mammals. In general, the myeloarchitectonic analysis of the intermediate part of the hypothalamus of the dog showed that this region does not differ much from the essential structural scheme of the hypothalamus in other animals in topography, structure, and connections. (30 ref.)—*Journal summary.*

A comparison of the course of postnatal ontogenesis of the auditory fields in the monkey and man disclosed great differences. A more complex structural organization of the auditory fields was observed in man, expressed in (a) the emergence of Field 42, (b) the division of Field 41 into subfields, and (c) a better expression of areal signs. There were also differences in times and rates of formation of these fields, corresponding to the great differences in times and rates of formation of auditory sensitivity after birth—differences connected with the appearance in man of the 2nd signal system. 10260. Wurtman, Richard J. (Massachusetts Inst. of Technology) *Brain monoamines and endocrine function: Neuroendocrine transduction: An essay.* *Neuroscience Research Program Bulletin*, 1971(Mar), Vol. 9(2), 182-187.—In general, the brain sends signals to other organs via synaptical chains of neurons. However, for some tasks, including regulation of concentrations of certain substances in the extracellular fluid, and control of reproduction and lactation mechanisms, the brain communicates via cells called "neuroendocrine transducer cells." Their input signal is that of a neuron, they respond to a neurotransmitter diffusing across a short distance, typically at a synapse. Their output signal is that of a true endocrine cell; they emit coded chemical messages that are delivered by the circulation to many or all cells in the body, but only a relatively small number of cells can decode the message. At least 5 types of cells, 3 peripherally and 2 centrally innervated, can now be thus classified.—*U. A. Preilowski.*

(National Inst. of Mental Health, Lab. of Psychology, Bethesda, Md.) *Interaction between the hemispheres in unimanual somesthetic learning.* *Experimental Neurology*, 1971(Jan), Vol. 34(1), 123-138.—Studied the pathways through which the prefrontal and temporal lobes of both hemispheres in monkeys contribute to unimanual learning of somesthetic discrimination and reversal. Ss with bilateral removals of each lobe (B group) were compared with 6 Ss having corresponding unilateral removals combined with section of the telencephalic commissures (U + s group). 10 unoperated Ss and 6 Ss with contralateral lesions alone served as controls. Although the B and U + s groups showed quantitatively similar overall impairments, the B group Ss were impaired only in extinction of the original habit whereas those of the U + s group were deficient only in acquisition of the new habit after the acute extinction phase. It is proposed that the deficit specific to B group Ss was persistent interference between nonsensorimotor regions of the endbrain and lower centers, by contrast, the deficit specific to the U + s group Ss was a sensory and motor "neglect," resulting from the loss of horizontal connections between nonsensorimotor and sensorimotor regions within the endbrain.—*Journal abstract.*

Michigan, Medical Center) Motor-sensory and visual behavior after hemispherectomy in newborn and mature rats. *Experimental Neurology*, 1970(Dec), Vol. 29(3), 416-438. —Removed 1 lateral half of the forebrain and diencephalon from 22 infant and 6 adult hybrid and Wistar rats. Ss were then compared with 16 sibling controls. Operated Ss showed (a) loss of tactile placing opposite the ablation, (b) the ability to discriminate visual patterns, and (c) the ability to visually gauge variable jumping distances. Some Ss performed the visual tasks using the eye opposite the hemispherectomy alone, which was exclusively supplied with uncrossed retinogeniculate fibers. Differences between Ss were (a) loss of tactile placing after operation in infants was delayed until the 17th day, (b) impaired stride in operated adults; and (c) the development in infants of a small, uncrossed corticospinal tract. The stride component in locomotion seemed dependent on the corticospinal tract system, and was partially dissociated from the placing reaction essential for locomotion on rough terrain. The possibility that the small remodeled corticospinal tract spared the stride component is discussed. (31 ref.)—*Journal abstract*.

10275. Seva Diaz, Antonio. (U. Zaragoza, Medical School, Spain) Algunos aspectos de catatonía experimental por serrados en polo frontal de distinta amplitud. [Some aspects of experimental catatonía with various induced serrated lesions of the frontal cortex.] *Archivos de Neurobiología*, 1969(Apr), Vol. 32(2), 155-189. —Describes a new technique applicable for use in investigations of experimentally induced feline catatonía. The technique, called the serrated technique, consists of

the application of bow knot nylon sutures to various induced serrated lesions on surfaces of the frontal cortex in cats. Brain electrical activity is monitored during the procedure via EEG recordings. Induced lesions are found to produce a reduction of aggressive behavior in cats; there appears to be a correlation between lesions of the frontal lobe and experimental catatonía. This technique is recommended as a means of investigation of catatonic behavior in cats. (French & English summaries) (15 ref.)—B. A. Stanton.

10276. Sherman, S. Murray. (Australian National U., Capital Territory, Canberra City) Role of visual cortex in interocular transfer in the cat. *Experimental Neurology*, 1971(Jan), Vol. 30(1), 34-45. —Investigated the role of the visual cortex (areas 17, 18, and 19) as a locus important for interocular transfer. 14 cats were tested for interocular transfer of a series of brightness and pattern discriminations in a 2-choice, positive reinforcement paradigm. 3 Ss were controls, and 11 Ss underwent manipulations designed to reduce the number of binocular cells in their visual cortices: (a) rearing with external strabismus induced by neonatal transection of 1 or both medial rectus muscles and/or surgery in adulthood to cut midbrain and forebrain commissures (but not the optic chiasm); and (b) ablation of areas of visual cortex. Controls showed complete transfer of every discrimination. Ss reared with strabismus and no adult surgery and 8 normally reared Ss with adult brain lesions showed transfer deficits. Results suggest a role in interocular transfer for the binocular cells of the visual cortex, and that few binocular cells in the visual cortex or the geniculocortical regions outside of areas 17, 18, or 19 can subserve interocular transfer. 10292. Wilkinson, H. A., Mark, V. H., & Wilson, R. (Harvard Neurosurgical Service, Boston, Mass.) Sleep induced by focal brain suppression using anesthetic gases. *Experimental Neurology*, 1971(Jan), Vol. 30(1), 30-33. Studied the safety and effectiveness of silicone rubber tubing "chemodes" for stereotaxic intracerebral implantation in cats. In 23 adult cats, the chronically implanted silastic chemodes and the anesthetic gas, tetrafluoroethane, caused little cerebral reaction, while inducing satisfactory and reversible focal cerebral suppression. Silastic rubber chemodes allowed the focal introduction of various gases, liquids, and solutions into the brain with no additional distortion of the brain. Since the membrane was impermeable to bacteria, nonsterile chemicals could be employed. It is concluded that the use of brain stimulants as well as suppressants should make these devices useful for animal experimentation and human therapy.—*Journal abstract*.

Electrical Stimulation

10293. Aleksandrovskaya, M. M. & Kruglikov, R. I. (USSR Academy of Sciences, Inst. of Higher Nervous Activity & Neurophysiology, Moscow) Vliyaniye elektroschoka na funktsiyu pamyati i gliko-neironal'nye otnosheniya v golovnom mozge krya. [The effect of electric shock on the functioning of memory and glial-neuronal relationships in the rat's brain.] *Doklady Akademii Nauk SSSR*, 1971, Vol. 197(5), 1216-1217. — Passive avoidance response was established in white rats; Ss were tested for retention of the CR 24 hr. later. Electric shock was administered immediately after conditioning, 2 hr. after, 2 hr. before, and 2 hr. before the test. Only immediate shock led to a significant loss of retention ($p < .01$). Ss were sacrificed and their brain cells, especially those of the motor area, were stained and examined microscopically. Immediate shock led to the swelling of neuron bodies, nuclei, and dendrites. 2 hr. after shock only the dendrites of some of the neurons were swollen, but other morphological changes indicated a sharp increase in neuronal activity. The number of astrocytes increased immediately after shock and was even larger after 2 hr., but their size decreased somewhat. In addition, electric shock led to an increase in the number of oligodendroglial and microglial cells. It is hypothesized that the swelling of neurons interferes with neuronal metabolic processes and therefore with the circulation and consolidation of short-term memory. *L. Zusne*.

10298. Gerken, George M. (Calder Hearing & Speech Center, Research Div., Dallas, Tex.) Behavioral measurement of electrical stimulation thresholds for medial geniculate nucleus. *Experimental Neurology*, 1971(Apr), Vol. 31(1), 60-74. Performed 3 experiments using adult female cats ($N = 6$) with electrodes permanently implanted in the medial geniculate nucleus (MG). The manner in which detection thresholds were influenced by pulse-train, pulse-pair, and the presence of concurrent acoustic stimulation was examined. Detection thresholds for electrical stimulation decreased in the initial sessions of testing but then stabilized, typically showing a slight increase in sensitivity with prolonged testing. Data indicate that threshold values for caudal MG are approximately twice the threshold values for anterior MG. In the pulse-train and pulse-pair experiments, threshold was lowered by reduction of interpulse interval. Results are discussed in terms of the efficiency of the electrical stimulation and the summation of neural excitation. The effects of concurrent acoustic stimulation on MG detection thresholds were complex, sometimes resembling facilitation or masking. These results suggest a means of evaluating the central effects of peripheral stimulation. (20 ref.)—*Journal abstract*.

10300. Lewińska, Maria K. (U. Łódź, Poland) The effect of amygdaloid stimulation on daily food intake in cats. *Acta Biologica Experimentalis*, 1968, Vol. 28(2), 71-81. Implanted electrodes into the ventromedial part of amygdala in 26 cats 2 wk. after the implantation during a period of about a mo., this region of amygdala was stimulated every other day for about 30 min. Changes in the daily milk intake were observed as an effect of the irritating action of the electrodes. As a result of the electrical stimulation, these changes were additionally intensified. The effect of the electrodes on the ingestion of cereal was less intensive, with changes occurring only during electrical stimulation. A decrease in the daily intake of milk and cereal occurred in Ss with electrodes implanted in basal parvocellular nucleus. In most of these, a simultaneous strong aversion towards raw meat was observed. An increase in the daily consumption of milk and cereal occurred in Ss with electrodes situated in the anteromedial area. Some of these Ss also displayed an increased appetite for raw meat.—*Journal summary*.

10301. Monti, J. M. (Hosp. de Clínicas, Montevideo, Uruguay) Effect of recurrent stimulation of the brain stem reticular formation on REM sleep in cats. *Experimental Neurology*, 1970(Sep), Vol. 28(3), 484-493.—Studied 5 adult cats prepared for chronic sleep

recordings of the effect of (a) recurrent stimulation of the pontine reticular formation, (b) REM sleep-deprivation, and (c) the interaction of both on the total REM sleep time and the mean number and duration of REM periods. A regularization in the occurrence of REM periods, as well as an increase of the total REM sleep time and mean duration of REM periods was observed. A significant increase in the number of REM periods occurred only when pontine reticular formation and REM sleep deprivation were interacted. Findings support the concept that REM sleep is an active process and that REM periods soon after stimulation of the pontine region are closely related to the stimulus.—*Journal abstract.*

10306. Tarnecki, Remigiusz & Konorski, Jerzy (Nencki Inst. of Experimental Biology, Warsaw, Poland) **Instrumental conditioning of thalamogenic movements and its dependence on the cerebral cortex.** *Acta Biologica Experimentalis*, 1969, Vol. 29(1), 17-28.—Movements of the limbs evoked by electrical stimulation of the ventralis posterolateralis (VPL) or stimulation of the ventralis posterolateralis (VPL) nucleus with the frequency of 300 cps were used in instrumental alimentary conditioning in 10 cats. In the 1st stage there was mutual facilitation between the instrumental and VPL-evoked movements consisting in triggering of the instrumental movements

by VPL-evoked movements and lowering the threshold of the VPL-evoked movements by instrumental conditioning. After the instrumental CR was firmly established, Ss performed the trained movement immediately after eating food presented after the preceding movement. The VL-evoked movements were instrumentalized after about 100 trials (for the forelimb). When instrumental conditioning was completed, the intervals between the performances of the trained movement remained long, amounting to 1 min. or more. The instrumental responses transformed from the thalamogenic responses had exactly the same shape as the former ones. Lesions sustained in the sensorimotor and premotor cortex did not abolish the instrumental responses derived from thalamic stimulation, but made them low, irregular, and fatigable. (Tokyo, Faculty of Medicine, Japan) **A study of the current spread on electric stimulation of the individual utricular and ampullary nerves.** *Acta Otolaryngologica*, 1971(Apr), Vol. 71(4), 313-318. —Electrically stimulated single vestibular nerve branches in 20 healthy cats through implanted electrodes. Different combinations of extraocular muscles were activated by each of the single vestibular nerve branches and there were 3 frequency-dependent contraction modes: the lateral-canal, the vertical-canal, and the utricular type. Results show that these could be utilized for detecting whether single or combined vestibular nerve branches are stimulated. (German summary)—*Journal abstract.*

10308. Ungiadze, A. A. (Inst. of Physiology, USSR) **O topograficheskoj lokalizacii funktsij gippokampa.** [On topographical localization of functions in the hippocampus.] *Sakartvelos SSR Mets'mereba'ta Akademii Moambe*, 1970(Jan), Vol. 9(1), 165-168.—Cats were used to study the role of different parts of the dorsal and ventral hippocampus in emotional behavior. Distinct topographic localization of function in the dorsal and ventral hippocampus areas was demonstrated by electrical stimulation of the hippocampus. Electrical stimulation produced different emotional reactions: the "arrest reaction" from electrical stimulation of the posterodorsal hippocampus and the "fear reaction" with avoidance from electrical stimulation of the medial portion. Electrical stimulation of the ventral hippocampus evoked orientation and fear reactions without avoidance. Electrical stimulation of the posteroventral hippocampus evoked the fear reaction with aggression. Threshold electrical stimulation of the anteroventral hippocampus elicited sleep. Strong electrical stimulation of the same area produced the fear reaction. Electrical stimulation of the medial portion of the ventral hippocampus evoked the arousal reaction. (15 ref.)—*Journal abstract.*

10309. Ungiadze, A. A. (Inst. of Physiology, USSR) **Vyrabotka uslovnoi reakcii strakha na bazis razdrasheniya gippokampa.** [Elaboration of the conditioned reaction of fear on the basis of hippocampal stimulation.] *Sakartvelos SSR Mets'mereba'ta Akademii Moambe*, 1970(Jan), Vol. 9(1), 169-172. —Studied the possibility of elaborating conditioned behavior using those emotional reactions which are elicited by direct stimulation (UCS) of the dorsal and ventral hippocampus; also studied was the electrical activity of

brain structures in the course of elaborating a CR. Ss were cats with chronically implanted electrodes in various structures: lateral hypothalamus, ventromedial nucleus of the hypothalamus, ventral and dorsal hippocampus, and sensorimotor area of the neocortex. A CR to sound (CS) became apparent after 5-9 reinforcements. After establishment of the CR the CS evoked slow potentials in the hippocampus, hypothalamus and the sensorimotor area of the cortex similar to the waves arising after cessation of hippocampal stimulation. It is suggested that this synchronized generalized activity is due to the influence of the mesencephalic reticular formation. (Georgian & English summaries).—*J. D. London.*

10310. Wada, J. A., Matsuda, M., Jung, E., & Hamm, A. E. (U. British Columbia, Kinsmen Lab of Neurological Research, Vancouver, Canada) **Mesencephalically induced escape behavior and avoidance performance.** *Experimental Neurology* 1970(Nov), Vol. 29(2), 215-220.—Trained 16 male and female cats who displayed escape or fearlike behavior upon electrical stimulation of the hypothalamus (HP) and/or midbrain (MB) to interrupt the stimulation by plate pushing (escape learning). 7 Ss who successfully learned to escape were further subjected to avoidance conditioning trials with a bell or flicker as CS, and electrical HP or MB stimulation as UCS. All Ss failed in avoidance learning with HP stimulation and 4 Ss succeeded with MB (central gray matter) stimulation. It is concluded that, if this difference reflects differential motivational process produced by either HP or MB stimulation, then the notion of a "homogenous" neuronal mechanism for flight-escape extending from forebrain through hypothalamus into central gray matter of MB is not supported. The bell was somewhat more effective than the flicker as CS, suggesting the possibility of then differential neurobiological significance in organizing the innate behavioral pattern necessary for the survival of this particular species.—*Journal abstract.*

ELECTRICAL ACTIVITY

10312. Cowen, Murray A. (Veterans Administration Hosp., Syracuse, N.Y.) **Biochemical modulations of the transepithelial direct current circuit in humans.** *Psychiatric Quarterly*, 1970(Jul), Vol. 44(3), 408-421.—Defines and describes the transepithelial direct current (TCDC) potentials. The relationship of TCDC potentials to blood sugar levels, state of hydration, eosinophile counts, and blood cortisol levels was examined in 52 male and 14 female 18-45 yr old healthy adults and 21 male and 21 female postmenopausal or senile hospital patients. The effects of various chemical variables on the TCDC potentials were studied in the Ss. Variables included: thyroid, testosterone, estrogen, progesterone, cortisone and ethanol administrations; water loading; hypocapnia due to hyperventilation; blood sugar and eosinophile determinations. Results indicate "that the TCDC potentials are very sensitive to certain of the above factors and the effects are compatible with the hypothesis that the voltages are modulated by changes in the permeability of the cortical blood brain barrier system." (19 ref.)—*S. Knapp.*

10313. Fernández-Guardiola, Augusto & Ayala, Fructuoso (National Autonomous U. Mexico, Biomedical Research Inst., Mexico City) **Red nucleus fast activity and signs of paradoxical sleep appearing during the extinction of experimental seizures.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30, 547-555. Analyzed the electrical activity of several cortical and subcortical structures in 34 cats during electrically and pentamethylenetetrazol-induced seizures and compared this with the spinal monosynaptic reflex variations. 5 major results are revealed: (a) The monosynaptic spinal reflex was initially facilitated during the tonic phase and when elicited in the vicinity of a clonic wave. (b) In the last stages of the seizure, the monosynaptic spinal reflex appeared deeply inhibited. This inhibition coincided with the appearance of fast sinusoidal (40 cps) activity in the red nucleus. (c) The electrical stimulation of red nucleus areas which show fast sinusoidal activity was also associated with a spinal monosynaptic reflex depression. (d) The electrical stimulation of the cortical sensorimotor areas in which the tonic clonic activity was recorded facilitated the monosynaptic spinal reflex. (e) In the last stages of the convulsive activity, central and peripheral signs appeared which were similar to those described for paradoxical or REM phase of normal sleep. (French summary) (34 ref.)—*Journal summary.*

10314. Gusevnikov, V. I. & Loginov, V. V. (Moscow State U., USSR) **Nekotory printsipy funktsional'noi organizatsii zritel'nogo tsentra karpa.** [Some principles of the functional organization of the visual center in the carp.] *Biologicheskue Nauki*, 1969(Apr), No. 4, 54-64.—The responses to light of 200 functional units, distributed in different layers of the optic tectum of 34 immobilized carps were utilized in a microelectrode study of the functional organization of the neuronal structures in the visual center of the carp. 12% of the neurons exhibited spontaneous activity and were indifferent to any visual stimuli. 38% reacted only to certain changes in illumination and in a number of cases exhibited constant activity in 1 or another range of illumination. Characteristic of 40% was a combination of (a) reaction to change of illumination, and (b) various degrees of specific sensitivity to contrast border movement, including selectivity with respect to direction of movement (10%). 10% reacted only to the movement of contrast objects, exhibiting various degrees of selectivity with respect to direction, speed, and form. It is suggested that the formation of such responses is connected with the successive integration of on- and off-impulsations arriving from the retina of the carp. Comparison with data, procured from other parts of the brain and from the visual nerve, makes it possible to substantiate conceptions concerning the role of the optic tectum in the treatment of visual signalization. (23 ref.)—*J. D. London.*

10315. Gusevnikov, V. I. & Supin, A. Ya. **Ritmicheskaya elektricheskaya aktivnost' golovnogo mozga.** [Rhythmic electrical activity of the brain.] *Uspekhi Sovremennoi Biologii*, 1968, Vol. 66(1), 66-86.—The authors survey (a) their findings on the mechanisms involved in cerebral rhythmic electrical activity, and (b) the literature on the subject. The characteristics of 4 major forms of cerebral rhythmic electrical activity are described: (a) α or α -like rhythm, (b) the rhythm of sleep spindles, (c) stress rhythm, and (d) the rhythmic activity of the vertebrate olfactory

analyzer. The major hypotheses of the neurophysiological mechanisms of cerebral rhythmic electrical activity are critically examined. In connection with this, the authors review their experimental material on the identity of the mechanisms underlying afteraction discharge with those underlying the α -like activity of the rabbit visual cortex (4 p. ref.)—*I. D. London.*

10316. Gusevnikov, V. I. & Vodolazskii, A. N. (Moscow State U., USSR) *Nekotorye dannye o zritel'nom analizatore golubya: "Detektornye" svoystva setchatki.* [Some data on the visual analyzer of the pigeon: The "detective" properties of the retina.] *Biologicheskoe Nauki*, 1968(Sep), No. 9, 45-52.—Immobilized pigeons (*Columba livia*) were used in a microelectrode study of the detective properties of single ganglionic cells in the retina (over 150 recordings), in order to determine the principles guiding these cells in coding the various parameters of the visual stimulus. A consideration of the data led to a classification of the ganglionic cells according to their responses to different visual test stimuli 4 types of cells were discerned: (a) 3%, distinguishing small objects (the convexity detectors); (b) 62%, distinguishing directed movement; (c) 28%, distinguishing moving contrast; and (d) 7%, enhancing their spontaneous activity when light was switched off. Proposed is a hypothesis dealing with (a) the coding of visual parameters in the distribution of cellular discharge frequencies, and (b) a probability-statistical mechanism for the recognition of visual images. It is still premature to attempt a connection between the detective properties of the retinal ganglionic cells and elements of the behavior of the organism, its ecology, etc.—*I. D. London.*

10317. Hall, Karyl M., Hicks, Robert A., & Hopkins, H. Kenneth. (Agnews State Hosp., San Jose, Calif.) *The effects of low level DC scalp positive and negative current on the performance of various tasks.* *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 689-691.—RT in detection of a 1,000 cycle tone was measured for 18 normal volunteers and followed by a memory test of the number of trials to criterion and the number of correct responses in a memory drum learning task, all following scalp polarization. None of the statistical tests following significance. Hence, the effects of scalp polarization on behavior previously reported in less controlled studies are thought to be of questionable validity.—*R. L. Sulzer.*

10320. Keidel, W. D. (Friedrich-Alexander U., 1st Physiologisches Inst., Erlangen, W. Germany) *D.C. potentials in the auditory evoked response in man.* *Acta Oto-Laryngologica*, 1971(Feb), Vol. 71(2-3), 242-

248.—While the conventional auditory evoked response is mainly related to the onset of auditory stimuli and to their cessation (off-effect) during prolonged sinusoidal stimulation, it was found that a marked d.c. potential could be recorded by means of a special d.c. recording set-up in both animals and man. Precautions had to be taken to avoid polarization artifacts originated by the electrodes (Beckman-type). Those difficulties were overcome, and clearly reproducible records of d.c. potentials in man were obtained. These d.c. potentials depend upon both stimulus intensity and duration, and show interaction with other sensory modalities. A comparison of their time course with interval and PST-histograms from single units in colliculus and geniculate prove their intramodal specific nature. The importance of the d.c. potential for "objective" audiometry is demonstrated. (German summary) (22 ref.) *Journal abstract.*

10321. Kogan, A. B., Kuraev, G. A., & Choravan, O. G. (State U. Rostov, USSR) *Nekotorye kharakteristiki informatsionnykh protsessov v zritel'nom analizatore.* [Some characteristics of informational processes in the

visual analyzer.] *Doklady Akademii Nauk SSSR* 1971 Vol. 197(4), 951-953.—Microelectrode recordings were made of impulses originating in the retinal ganglion cells and the tectum in response to light flashes in the frog *Rana ridibunda*. Treating the nerve impulses obtained from the 2 sources as a binary code the following informational measures were computed: channel capacity, redundancy of nerve impulses from the ganglion cells, redundancy of nerve impulses from the tectum, and channel capacity and close relationship existed between channel capacity and the redundancy of nerve impulses from the tectum with the redundancy of nerve impulses corresponding to higher redundancy values, especially when nerve impulses from the ganglion cells was also high. An analogous relationship was found between the redundancy of the system and the redundancy of nerve impulses. The findings are taken to suggest the existence of a feedback mechanism whose function is to control different stages to ensure a constant level of activity of the entire system.—*L. Zusne.*

10325. McAdam, Dale W. & Rubin, Eugene H. (U. Rochester) **Readiness potential, vertex positive wave, contingent negative variation and accuracy of perception.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jun), Vol. 30(6), 511-517.—Recorded the readiness potential (RP), contingent negative variation (CNV), and vertex positive wave (P302) in a situation where 10 19-24 yr. old female Ss presented themselves with brief visual stimuli, attempted to perceive them correctly, and subsequently reported their perceptions. Results show that the RP preceding the button press leading to the presentation of the stimulus was a reliable index of the neural events associated with subsequent correct or incorrect perception. P302, although showing clear localization at the vertex, was not reliably correlated with the behavioral response. The CNV was shown to be related in this situation to motivation/expectancy/attention factors following the perception and preceding the report. It is concluded that the RP and CNV reflect common underlying neural processes when both are studied in complex (global) psychological situations. (French summary)—*Journal summary*.

10326. Mendel, Maurice I. & Goldstein, Robert. (U. Wisconsin) **Stability of the early components of the averaged electroencephalic response.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 351-361.—Examined the early components of the averaged electroencephalic response (AER) at 3-hr intervals in 8 22-26 yr. old normal hearing adults over a single, sleepless 24-hr span. During each of the sessions, 3 series of clicks at 50 db. sound level were presented to the right ear of the S as he sat reading. 1,024 clicks at the rate of 9.6/sec were used in obtaining each AER, which was recorded from an electrode on the vertex. The response pattern was very stable, characterized by a polyphasic configuration. At the conclusion of the 24-hr span, 3 Ss were tested with the same stimuli during various stages of sleep. The early components of the AER remained consistent even during sleep. Threshold searches were successfully carried out on 2 of the sleeping Ss. It is concluded that the long-term stability of the early components of the AER in the awake and sleep states makes them practical as a response index for electroencephalic audiometry. Their characteristics are considered to be more compatible with a neurogenic than with a myogenic theory of their origin. (17 ref.)—*Journal abstract*.

10327. Mendel, Maurice I. & Goldstein, Robert. (U. Wisconsin) **The effect of test conditions on the early components of the averaged electroencephalic response.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 344-350.—Examined the effect of test conditions on the early components of the averaged electroencephalic response (AER) in 6 male and 6 female 21-43 yr. old normal hearing Ss. Clicks at 50 db. sound level were presented to the right ear at the rate of 9.6/sec while the S was (a) in the dark with eyes closed, (b) in the light with eyes open, and (c) reading. Order of presentation was counterbalanced with each condition repeated 3 times. 1,024 clicks were used in obtaining each of the 9 AERS, which were recorded from an electrode on the

vertex. The polyphasic response pattern was relatively consistent. No significant differences occurred in either latency or amplitude of the response with the different test conditions. Latency and amplitude did not differ as a function of order, although the 1st response was usually larger than the mean of the remaining 8. Implications for practical audiometry are discussed.—*Journal abstract*.

10328. Mitler, Merrill M. (Michigan State U.) **The developmental significance of low voltage, fast wave sleep for the stimulus input requirements, regulative mechanisms, and development of the central nervous system in a species of deer mouse, *Peromyscus maniculatus bairdi*.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6952.

10329. Oniani, T. N., Naneishvili, T. L., & Koridze, M. G. (Inst. of Physiology, Tbilisi, USSR) **Dinamika fonovoi élektricheskoi aktivnosti limbicheskikh struktur koshki vo vremya bodrstvovaniya i sna.** [Dynamics of spontaneous electrical activity in the limbic structures of the cat in the wakeful state and sleep.] *Sak'ar'velos SSR Mets'nierebat'a Akademii Moambe*, 1969(Nov), Vol. 56(2), 429-432.—Cats were used to study the dynamics of electrical activity involving bursts of near-sinusoidal waves in such structures of the brain as the olfactory bulbs, amygdala, pyriform cortex, and anterior hypothalamus when the Ss were engaged in various behavioral acts and during the various phases of sleep. Along with recordings of summated electrical activity, spectral analysis of the different rhythms was undertaken. During "emotional reactions (attention, fear)" electrical activity involving bursts of near-sinusoidal potentials appeared in the limbic structures with enhancement of θ -rhythm in the hippocampus. During the paradoxical phase of sleep, bursts were absent in the electrical activity of these structures despite strong θ -rhythm in the hippocampus. (Georgian & English summaries)—I. D. London.

10330. Radil-Weiss, T. & Škvaril, J. (Czechoslovak Academy of Sciences, Inst. of Physiology, Prague) **A technique for recording the impulse activity of four adjacent neurones in the brain.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jun), Vol. 30(6), 571-574.—Describes a stereotaxic instrument which allows the preliminary optical measurement of the distances between the tips of 4 independently movable microelectrodes and their introduction into a small region of the brain of different laboratory animals. The localization and mutual distances in space of the 4 electrode tips can be estimated. The pulse trains recorded extracellularly from 4 different neurons are processed by means of a LINC computer, evaluating interval and autocorrelation histograms of all of them separately and the forward/backward recurrence time interval and cross-correlation histograms for pairs of neurons in all possible combinations. (French summary)—*Journal summary*.

10331. Salomon, G. & Elberling C. (Copenhagen County Hosp., Gentofte, Denmark) **Cochlear nerve potentials recorded from the ear canal in man.** *Acta Oto-Laryngologica*, 1971(Apr), Vol. 71(4), 319-325.—Describes a nonsurgical, clinically applicable method of recording action potentials from the cochlea, using average technique on an IBM 1800 computer. The components N_1 , N_2 , and N_3 were obtained in response to well-defined transient sounds, which were measured with a sound probe. Also, an electropositive response is

relationship between convergence and accommodation. (French summary)—*Journal summary*.

10337. Howard, Gilbert; Howard, Alfreda, & Wittman, Eleanor. (Hillside Hosp., Glen Oaks, N.Y.) **Automating the EEG report.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 442.—Describes a standard checklist for recording EEG data. The information is keypunched and processed on an IBM 360/50 computer. Using a program written in NOVEL, a narrative report is generated suitable for clinical reporting. This system facilitates research and surveys since the data are machine retrievable. Further, the computer output can substitute for the usual typed report.—*Author abstract*.

10338. Irvine, D. R., Webster, W. R., & Sack, K. H. (Monash U., Neuropsychology Lab., Clayton, Victoria, Australia) **Effects of repetitive stimulation and state of arousal on cochlear potentials.** *Experimental Neurology*, 1970(Oct), Vol. 29(1), 16-30.—Recorded click-evoked responses from the round window (RW) in unanesthetized cats. In Exp. I, RW responses were obtained from 5 Ss during different arousal states prior to and following repetitive 60-db click stimulation. Averaging techniques were employed to separate the cochlear microphonic and auditory nerve action potential components of these responses. Pre- and post-stimulation comparisons for each arousal state gave no evidence of habituation decrements. The general pattern of amplitude variation with arousal was in accordance with the hypothesized dependence of such changes on nonreflex middle ear muscle activity. Certain features of the results suggest that masking by noise generated by the Ss own movements was also involved. In Exp. II with 10 Ss, there was no evidence of response decrements to repetitive 45-db click stimulation in Ss with unilaterally sectioned middle ear muscles. Results are contrary to theories of peripheral "gating" of auditory input. (37 ref.)—*Journal abstract*.

10343. Nyquist, J. K. & Towe, A. L. (U. Washington, Medical School) **Neuronal activity evoked in cat precruciate cerebral cortex by cutaneous stimulation.** *Experimental Neurology*, 1970(Dec), Vol. 29(3), 494-512.—Made extracellular recordings of the evoked activity of neurons in the precruciate forepaw cortex of 41 adult domestic cats after cutaneous stimulation of each limb. Neurons having bilateral receptive fields confined to the forelimbs and thoracic trunk region comprised 25% of the sample of 690 neurons. These neurons discharged with a short latency after stimulation of precruciate arm cortex of the opposite hemisphere.

Many other wide-field but few small-field neurons responded (a) to interhemispheric activation, (b) to light and/or sound stimulation, and (c) to both light touch and hair-bending. Most pyramidal tract neurons had wide receptive fields. It is concluded that the corticofugal elements in precruciate tissue receive information from cutaneous receptors of various types, distributed widely over the body surface, and influenced by several modalities of sensory input. The "interneurons" of precruciate cortex, on the other hand, have sharply restricted input channels, and provide the most immediate and powerful modulation of corticofugal elements. (42 ref.)—*Journal abstract*.

10344. Oniani, T. N., Mol'nar, P. P., & Badridze, I. K. (Inst. of Physiology, Tbilisi, USSR) **Rezultaty spektral'nogo analiza elektroentsefalogrammy vo vremya sna i bodrstvovaniya.** [Results of spectral analysis of the electroencephalogram during sleep and in the wakeful state.] *Sak'art'velos SSR Mets'nierebat'a Akademii Moambe*, 1970(Jan), Vol. 57(1), 173-176.—Cats were Ss in a study of various cortical rhythms during several phases of the sleep-arousal continuum, making use of spectral analysis and integration. During spontaneous, as well as evoked, arousal (the latter by an alimentary conditioned signal or by electrical stimulation of the reticular formation), high-voltage slow waves (Δ , θ , and α) were found to be inhibited in different neocortical areas and for a short period in the hippocampus as well. In place of the generally reported increase in the low-voltage fast activity components (β_1 and β_2), a decrease in these rhythms was found. (Georgian & English summaries)—*I. D. London*.

10345. Oniani, T. N., Mol'nar, P. P., & Naneishvili, T. L. (Inst. of Physiology, Tbilisi, USSR) **O dvukh fazakh paradoksal'noi stadii sna.** [On two phases of the paradoxical stage of sleep.] *Sak'art'velos SSR Mets'nierebat'a Akademii Moambe*, 1969(Dec), Vol. 56(3), 685-688.—Cats were Ss in an EEG study of different cortical and subcortical structures during paradoxical sleep along with simultaneous registration of several somatic and autonomic indices. Paradoxical sleep was shown to be composed of 2 distinct phases. The hippocampogram showed Δ and θ dominance in the 2 phases, respectively. Autonomic and somatic indicators suggest the presence of "emotional, oneiric content" only in the 2nd (θ) phase, but not in the 1st (Δ). (Georgian & English summaries)—*I. D. London*.

10346. Osborne, R. T. (U. Georgia) **Heritability estimates for the visual evoked response.** *Life Sciences*, 1970(May), Vol. 9(9, Pt. 2), 481-490.—Studied cortical response patterns evoked by a light stimulus for identical and fraternal twins and for age and sex-matched control Ss. The evoked potential (visual evoked response—VER) responses were analyzed with a dual-channel online active band-pass filter system which separated the raw VER into the 3 common EEG frequency bands. The signals were next fed to the 4 input channels of a computer of average transients, CAT 1,000. For each S 4 X-Y plots representing the raw VER and the 3 major VER components were obtained. The VER determined from subdermal scalp electrodes is a stable and reliable physical measurement. Using only standard laboratory techniques the 1st 250 msec. of the pattern after the stimulus is almost perfectly reliable for periods as long as 17 wk. The hereditary nature of the VER is shown by the high degree of similarity of response patterns for identical twins and by the predictable

decrease in similarity for fraternal twins and for unrelated control Ss. The concordance of the VER intraclass correlations for monozygotic and dizygotic twins with those of well-established polygenetic, biometric, and psychometric human characteristics is remarkable.—*Journal summary.*

10351. Ruhm, Howard B. (U. Oklahoma, Medical Center, Oklahoma City) **Rate of frequency change and the acoustically evoked response.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 29-34. —EEG responses were evoked from the scalp of 4 young adult human Ss by acoustic signals that were linearly raised and lowered in frequency at various sweep rates. It was found that the latency of the N_1 component and the amplitude of N_1 - P_2 are sensitive to the rate of signal change. Latency seems to be sensitive over a broader range of sweep rates than does amplitude and may be related to the perceptual differentiation between a sweep and an abrupt change in frequency. The response evoked by frequency sweeps seems to be elicited by the onset of upswing or downswing, but not by the offset of either.—*Journal summary.*

10356. Nelson, Thomas M., Bartley, S. Howard; Bourassa, Charles M., & Ball, Richard J. (Eds.) (U. Alberta, Edmonton, Canada) **Symposium on aftereffect of response.** *Journal of General Psychology*, 1971(Jan), Vol. 84(1), 3-177. —Presents a group of papers pertaining to certain reactions of the optic pathway to various patterns of photic input, a major variable being time, and the consequent sensory outcome such as brightness, visual acuity, and color. The activities of the visual system are compared with those of several other sensory systems and a general theory of the neural basis for sensory response is proposed.

10357. Pollen, Daniel A., Lee, Jame R., & Taylor, Joseph H. (Massachusetts General Hosp., Neurobiology Lab., Boston) **How does the striate cortex begin the reconstruction of the visual world?** *Science*, 1971(Jul), Vol. 173(3991), 74-77. —Reports experiments which indicate that the striate cortex transforms the topographic representation of visual space in the lateral

geniculate body into a Fourier transform or frequency representation at the complex cell level via the intermediary simple cell stage of "strip integration." Each of these 3 stages contains essentially the same amount of information, which expresses a conservation of information principle; however, the form of the information is changed. In the transform domain, invariant descriptions of visual objects can be derived to serve as the basic sets required for pattern recognition and memory. It is suggested that these findings are fundamental for understanding the functional organization of the striate cortex. (29 ref.)—*Journal abstract.*

10358. Wickelgren, Barbara G. (U. Oregon) **Superior colliculus: Some receptive field properties of bimodally responsive cells.** *Science*, 1971(Jul), Vol. 173(3991), 69-71.—Reports that many cells in the intermediate and deep gray layers of the superior colliculus of a cat responded to both auditory and visual stimuli. These cells had similar receptive fields for both modalities and were directionally selective for both modalities, requiring stimuli moving laterally away from the S. It is suggested that cells that integrate auditory and visual information participate in the control of orienting and following responses to stimuli of both modalities.—*Journal abstract.*

10362. Firth, H., Lewis, S. A., Ogunremi, O. O., & Oswald, I. (Royal Edinburgh Hosp., Morningside, Scotland) **The effect of acute administration of (meta-trifluoro methyl-phenyl)-1-(benzoyl oxy) ethyl amino-2-propane (780 SE) and fenfluramine on human sleep.** *British Journal of Pharmacology*, 1970(Jun), Vol. 39(2), 462-463.—In contrast to other amphetamine derivatives, fenfluramine (40 mg.) and (meta-trifluoromethylphenyl)-1-(benzoyl oxy) ethyl amino-2-propane (780 SE) (300 mg.) had no effect on the REM phase of sleep. Ss were 7 normal 21-24 yr. old males. Like other amphetamines they disturbed sleep, increasing the number of shifts to Stages 1 (drowsiness) and W (arousal).—*Journal abstract.*

10363. Glushchenko, T. S. & Demin, N. N. (USSR

Academy of Sciences, Pavlov Inst. of Physiology, Leningrad) **Activnost' proteoliticheskikh fermentov razlichnykh otdelov golovnogo mozga krysa pri estestvennom sne i lishenii ego paradoxal'noi fazy.** [The activity of proteolytic enzymes in different regions of the rat's brain in natural sleep and with its paradoxal phase eliminated.] *Doklady Akademii Nauk SSSR*, 1971, Vol. 197(5), 1222-1224.—The amount of acid and neutral proteinase was determined in different parts of the brains of male Wistar rats under conditions of wakefulness, normal sleep, sleep deprivation, and different amounts of deprivation of paradoxal sleep. In normal sleep there was a slight increase in the activity of neutral proteinase in the brain hemispheres and in the mesencephalon, but not in the cerebellum. Deprivation of the paradoxal phase of sleep led, in general, to a decrease in the amount of neutral proteinase and an increase in acid proteinase. Sleep after prolonged sleep deprivation facilitated a relatively rapid reestablishment of normal proteolytic enzyme activity.—*L. Zusne.*

10364. Israel, Yedy. (U. Toronto, Ontario, Canada) **Cellular effects of alcohol: A review.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 293-316.—Ethanol, as well as the higher alcohols, can be classified as a "general depressant" since at large enough concentrations they depress different functions in many types of cells. It is generally accepted that alcohol is not metabolized to any great extent in the brain and that the tissue does not contain the enzyme alcohol dehydrogenase. The effect of alcohol in connection with the metabolism of gamma-amino-butyric acid was examined and it was found that alcohol inhibits the maximum sodium and potassium conductances responsible for the action potential in the squid giant axon. Ethanol reduces the plasma concentration of most amino acids. Most of the nonmetallic effects of ethanol are exerted on the cell membrane. (142 ref.)—*S. R. Diamond.*

10365. MacPherson, Catherine F. & Chinerman, Jakub. (McGill U., Allan Memorial Inst. of Psychiatry, Montreal, Quebec, Canada) **Effect of intraventricular injections of brain isoantibodies on learning.** *Experimental Neurology*, 1971(Apr), Vol. 31(1), 45-52.—Tested a passive immunization technique with anti-brain isoantibodies which produced the same type of detrimental effect on learning as active immunization in a shorter period of time. 20 female Wistar rats received serum γ -globulin (IgG), anti-brain IgG, or immune IgG at various levels of training on a visual discrimination problem. Ss receiving normal IgG showed no adverse effects, while Ss receiving anti-brain IgG before training performed below criterion after they received normal IgG on the day they reached criterion. Ss that received immune IgG prepared from the sera of rats that had been immunized with the microsomal fraction of rat brain (RB F-III) or rat liver (RL F-III) required a significantly larger number of trials to learn the problem. The anti-RB F-III IgG had a more widespread effect, producing Ss with significantly higher latencies, poorer memories, and an unusual behavioral trait tentatively called "spinning." It is suggested that the effect of the anti-RL F-III was due to its reaction with species-specific antigens in the brain, whereas the more deleterious effect of the anti-RB F-III IgG was due to its reactivity with both species- and organ-specific antigens in the brain.—*Journal abstract.*

10366. MacPherson, Catherine F. & Shek, Raymond P. (McGill U., Allan Memorial Inst. of Psychiatry, Montreal, Quebec, Canada) **Effect of brain iso-an-**

antibodies on learning and memory in the rat. *Experimental Neurology*, 1970(Oct), Vol. 29(1), 1-15.—Conducted 5 experiments with female Wistar and Lewis rats ($N = 108$) to examine the effects of immunization on the performance of a visual discrimination task. Ss that had been immunized with a crude microsomal fraction from rat brain or liver required a greater number of trials to learn the problem than Ss injected with saline solution. When trained Ss that had required a similar number of trials to learn the task were studied, the Ss that subsequently were immunized for 1 mo. with rat brain or liver proteins performed the learned task and learned a new problem as well as the controls that had been injected with saline solution. However, the immunized Ss required fewer trials to learn the reversal than the controls. Ss immunized with hen egg albumin behaved like animals injected with saline solution. Results suggest that species-specific antigens play as important a role as brain-specific antigens in the brain cells responsible for memory and learning. (37 ref.)—*Journal abstract*.

10368. Wurtman, Richard J. (Massachusetts Inst. of Technology) **Brain monoamines and endocrine function: Brain monoamines.** *Neurosciences Research Program Bulletin*, 1971(Mar), Vol. 9(2), 188-217.—The brains of mammals are able to synthesize at least 3 monoamines that appear to be neurotransmitters and to have a special role in the control of anterior pituitary function. These compounds are norepinephrine, dopamine, and serotonin (5-hydroxytryptamine; 5-HT). The 1st 2 are catecholamines and have their origin in circulating tyrosine; 5-HT is an indoleamine and is synthesized from circulating tryptophan. Evidence is described in detail.—*U. A. Preilowski*.

10369. Yanagihara, Takehiko & Hyden, Holger. (U. Göteborg, Inst. of Neurobiology, Sweden) **Protein synthesis in various regions of rat hippocampus during learning.** *Experimental Neurology*, 1971(May), Vol. 31(2), 151-164.—Studied leucine incorporation into proteins of various hippocampal regions of 80 Sprague-Dawley female rats during a learning experiment consisting of change of handedness. There was a consistent stimulation of leucine incorporation into total proteins (a) in the CA3 region throughout the course of learning, and (b) in the CA4 region only during the early period of learning. No clear stimulation could be detected in the CA1 region. 2 acidic protein fractions were further studied by polyacrylamide gel electrophoresis. Certain protein fraction incorporated tritiated leucine in the CA1 and CA3 regions more preferentially than in the CA4 region during the course of learning. Findings are correlated with the physiological-anatomical functions of the various parts of the hippocampus. The possibility that this particular protein fraction possessed preferential affinity to the function of the temporo-ammonic system during learning is noted. The specificity of this preferential stimulation for learning is discussed in comparison with the cellular and regional localization of the protein fraction. (20 ref.)—*Journal abstract*.

Drug Effects-Human

10372. Benke, A. & Unger, W. (K. A. Rudolf Foundation, Surgical Div., Vienna, Austria) **Ein tricyclen-derivat in der Narkose-Vorbereitung.** [A tricyclene derivative (BP 400) in anesthesia premedication.] *Arzneimittel-Forschung*, 1969(Nov), Vol. 19(11), 1900-1901.—For anesthesia premedication of 200 patients the tricyclene derivative 9-(N-methylpiperidylidene-4'-thioxanthene (BP 400) was used instead of atropine. Sufficient inhibition of salivation was observed in 91% of cases; 76% showed stable blood pressure conditions, in 15.5% the pressure values were elevated by more than 20 mm mercury (Hg) compared with the systolic initial values, and in 8.9% they were lower by more than 20 mm Hg. Pulse rate did not change in 77.5% of Ss, and 22.5% showed an increase of pulse rate by more than 20 bpm. In a comparison group of 100 Ss who had been premedicated with atropine, tachycardia occurred in 63 (= 63%).—*English summary*.

10373. Brohult, Johan; Levi, Lennart, & Reichard, Hans. **Urinary excretion of adrenal cortical and medullary hormones in man during and after one single massive dose of ethanol, and their modification by chlormethiazole.** *Reports from the Laboratory for Clinical Stress Research, Karolinska Sjukhuset*, 1969(May), No. 6, 22 p.—Administered approximately 500 ml. brand whiskey to 9 young, healthy males. This stimulus provoked pronounced increases in adrenaline and noradrenaline excretion during and soon after the ethanol ingestion. Similarly the hangover the next morning was accompanied by marked increases in adrenaline and noradrenaline excretion levels, in addition to increased excretion rates of 17-hydroxycorticosteroids. In 5 Ss treated with .5 gm. chlormethiazole, the catecholamine increases during the hangover period were significantly reduced. During the wk. following the ethanol ingestion, the increase in adrenal function tended to persist. Some theoretical and clinical implications of these findings are discussed and some indications in favor of a relationship between the emotional-behavioral and the physiological effects of ethanol ingestions are mentioned. (45 ref.)—*Journal summary*.

10374. Morgan, Hilary; Scott, D. F., & Joyce, C. R. (Royal Infirmary, Bristol, England) **The effects of four hypnotic drugs and placebo on normal subjects' sleeping and dreaming at home.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 649-652.—Effects upon quality of sleep and dreaming of 4 hypnotics, sodium amobarbitone, dichloralphenazone (welldorm), methaqualone-diphenhydramine (mandrax), and nitrazepam (mogadon), each at a single dose, were compared, double-blind, with placebo in 10 healthy Ss. A good night's sleep was more frequent after taking amobarbitone, mandrax, and, particularly, mogadon. Amyobarbitone reduced the number of dreams recalled.

and such dreams as were reported with this drug appeared to be free of anxiety and hostility.—R. L. Sulzer.

10375. Newmark, Charles S. (U. North Carolina, Medical School, Chapel Hill) **Techniques used to assess the efficacy of psychotropic drugs: A critical review.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 715-723.—Evaluates and summarizes some relevant literature concerning the techniques used to assess psychotropic drug efficacy. The need for an objective dependent variable to assess behavioral changes associated with drug effects is indicated. It is concluded that the most obvious basic requirements for the evaluation of psychotropic drugs at the human level are the development and maintenance of stable and reproducible base lines against which to assess drug-correlated changes. (39 ref.)—*Journal abstract*.

10376. Pelzer, H. & Maass, D. (Dr. Karl Thomae Ltd., Biochemical Research Lab., Biberach/Riss, W. Germany) **Pharmakokinetik und Metabolismus von 7-Chlor-1,3-dihydro-3-hydroxy-5-phenyl-2H-1,4-benzodiazepin-2-on und dessen Hemisuccinat beim Menschen.** [Pharmacokinetics and Metabolism of 7-chloro-1,3-dihydro-3-hydroxy-5-phenyl-2H-1,4-benzodiazepin-2-one and its hemisuccinate in humans.] *Arzneimittel-Forschung*, 1969(Oct), Vol. 19(10), 1652-1656.—The tranquilizer, 7-chloro-1,3-dihydro-3-hydroxy-5-phenyl-2H-1,4-benzodiazepin-2-one (adumbran) is, in humans, well absorbed both rectally and orally. Within 48 hr. of administration, $\frac{2}{3}$ of the oral dosage, and $\frac{2}{3}$ of the rectal dosage were recovered in the urine as glucuronide. The maximum blood level after oral and rectal administration was reached after 1-2 and 3-4 hr., respectively. For comparative doses the maximum blood level after rectal administration is about $\frac{2}{3}$ as high as that following oral administration. Due to the limited number of experiments carried out, a statistical evaluation of the blood levels is not yet possible. Similarly, 48 hr. after oral administration of the readily soluble hemisuccinate, $\frac{2}{3}$ of the adumbran residue was excreted in the urine in the form of its glucuronide. Unchanged hemisuccinate was not found in the urine. The chemical estimation was carried out by hydrolysis to 2-amino-5-chlorobenzophenone and its diazotization and coupling with α -naphthol to a red dye.—*English summary*.

10378. Skinner, Paul & Antinoro, Frank. (U. Arizona) **Auditory evoked responses in normal hearing adults and children before and during sedation.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 394-401.—Compared averaged evoked responses to auditory stimuli presented to young children and adults between awake and induced sleep conditions. 8 21-24 yr. old adults and 20 16 days to 5-yr-old children with normal hearing were tested before and during sedation at 2 suprathreshold levels with tone pips. Responses obtained during sedation assumed a distinctly different wave complex than those obtained under the awake condition. In all cases where responses were obtained from awake Ss, greater amplitude responses were obtained during sedation. The use of sedation with the children proved to be most important in obtaining more detectable responses and permitting evoked potential

audiometry with otherwise unmanageable Ss.—*Journal abstract*.

10379. Smith, G. F. (Dept. of Employment, Bristol, England) **The investigation of the mental effects of trichlorethylene.** *Ergonomics*, 1970(Sep), Vol. 13(5), 580-586.—Describes the effects on the CNS of the industrial solvent, trichlorethylene, which is both a fat solvent and a narcotic. Tests of mental function (including the Cornell Medical Index, Heron's Personality Questionnaire, and a general knowledge test) were given to 108 men who had been exposed to trichlorethylene. Trichloroacetic acid in the urine was used as an index of exposure to the solvent vapor. Results were compared with those of 63 matched controls working at the same factories. It was found that the number of separate complaints was generally related to the amount of exposure, although complaints in the low exposure group corresponded closely to the control group. The introduction of errors by subjective judgment is discussed as a methodological problem in such studies. (24 ref.)—*P. McMillan*.

10380. Snyder, Solomon H. (Johns Hopkins U., Medical School) **Work with marijuana: I. Effects.** *Psychology Today*, 1971(May), Vol. 4(12), 37-38, 40, 64-65.—Controlled research with marihuana has provided a better understanding of its effects including some surprising results. Experienced users seem to get high on less marihuana than novice users. This may be related to the fact that the liver manufactures the highly psychoactive 11-hydroxytetrahydrocannabinol and the more exposure to marihuana the more the liver makes. On some experimental tasks marihuana highs did not impair performance while alcohol did. Some researchers, however, have been able to befuddle Ss on marihuana especially when recent memories were involved. Marihuana seems to be a mild intoxicant, however, when tetrahydrocannabinol is taken in very heavy doses, auditory and visual hallucinations as well as feelings of unreality are common. *E. J. Posavac*.

10381. Spence, Mary T. (Texas Technological U.) **Effects of alcohol, information reduction, and speed load on short-term memory.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6306.

10382. Strassman, Harvey D., Adams, Bill, & Pearson, A. W. (Illinois State Psychiatric Inst., Chicago) **Metronidazole effect on social drinkers.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 394-398.—Created a cocktail party atmosphere in order to perform a study in an environment in which the Ss could move about at will, conversing with friends and meeting other men and women. Ss were middle-class residents of southern California selected solely on the basis of their history as social drinkers. $\frac{1}{2}$ the group received 250-mg tablets of metronidazole; the rest received placebo tablets. There was no significant difference in the amount of alcohol consumed or in the drinking pattern between the 2 groups. Significantly more of the experimental group than the placebo group reported physical reactions, and fewer reported psychological reactions.—*S. R. Diamond*.

10383. Tart, Charles T. (U. California, Davis) **Work with marijuana: II. Sensations.** *Psychology Today*, 1971(May), Vol. 4(12), 41-44, 66-68.—A questionnaire was constructed to reflect the sensations experienced while high on marihuana. Students distributed 750 copies to acquaintances who anonymously completed and

returned 153. The responses were summarized under effects on vision, audition, taste, time-space perception, perception of the body, physical movement, interpersonal relations, sexual relations, thought processes, memory functioning, emotions, self-control, and sense of identity.—*E. J. Posavac*

10384. Vacca, L., Kemali, D., Paolozzi, C., & Bravaccio, F. (U. Naples, Clinic of Nervous & Mental Disorders, Italy) **Correlazioni elettrografiche e psicopatologiche in soggetti sottoposti a registrazione continua in corso di esperienza lisergica.** [Electrographic and psychopathologic changes in subjects submitted to continuous registration during LSD experience.] *Acta Neurologica*, 1970(Nov), Vol. 25(6), 655-672.—Describes EEG modifications occurring in 4 adult volunteers under the effect of LSD-25. Correlations between EEG patterns and neuropsychological changes were effectuated only when the effect induced by the drug was more marked. In order to obtain more accurate data about some peculiar EEG abnormalities found during the previous observation, 2 Ss were submitted to a 2nd investigation consisting of EEG, EKG, and myotactic reflex (rotuleus) records, continuously registered and matched with psychological changes until the effects disappeared. Besides EEG changes already described in the literature, other effects are emphasized, such as long-lasting abnormalities on fronto-temporal leads, impairment of EEG response to even markedly strong alerting stimulations (absence of desynchronization), unusual EEG pattern concurring with behavioral alertness, etc. Data might be explained by the possible effect exerted by LSD-25 upon reticular formation. (22 ref.)—*English summary.*

10385. Viala, A. **Oenanthe de fluphenazine ("moditen-retard" N.D.); Chimie et pharmacologie.** [Fluphenazine enanthate ("Modi en-Retard" N. D.): Chemistry and pharmacology.] *Psychopharmacologie*, 1970(Mar), 3-9.—Discusses the chemical structure, metabolism, and elimination of the long-acting preparation fluphenazine enanthate. Pharmacodynamic effects include a sedative effect (potentiated by hypnotics), antipsychotic activity, and a cataleptogenic effect. Effects appear within a few hr. after subcutaneous injection and continue for 10-20 days.—*W. W. Meissner.*

10386. Waterlooh, E., Rittel, H. F., & Leide, E. (Rheinisch-Westfälischen Technischen Hochschule, Aachen, W. Germany) **Untersuchungen über 1-(6'-Chlor-3'-methylphenoxy)-3-tert.-butylaminopropan-2-ol-hydrochloride (KL 255): I. Verträglichkeit beim Menschen unter Ruhebedingungen.** [Studies on 1-(6'-chloro-3'-methylphenoxy)-3-tert.-butylaminopropan-2-ol-hydrochloride (KL 255): I. Tolerance with humans under rest conditions.] *Arzneimittel-Forschung*, 1969(Feb), Vol. 19(2), 153-156.—Reports observations during application of a new β -receptor blocker to humans. In the animal experiment the substance, 1-(6'-chloro-3'-methylphenoxy)-3-tert.-butylaminopropan-2-ol hydrochloride (KL 255), shows remarkably stronger β -receptor blocking activity than the previously known compounds. In tolerance tests in humans given oral doses of up to 250 mg. under rest conditions, no influence on the chosen parameters of the hemodynamic and metabolism could be observed. The substance was further studied in a double blind test on comparable groups simultaneously with a placebo. Under rest conditions there were no significant differences.—*English summary.*

10387. Wyatt, R. J., et al. (National Inst. of Mental Health, Bethesda, Md.) **Effects of 5-hydroxytryptophan on the sleep of normal human subjects.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jun), Vol. 30(6), 505-509.—Studied the effects on sleep of increasing brain serotonin with 5-hydroxytryptophan (5-HTP), the immediate precursor of serotonin, on 12 normal 18-21 yr. old Ss. In each S, REM sleep increased from 5-53% of placebo base line. Total REM activity also increased. Non-REM sleep, decreased slightly, apparently compensating for the increased amount of REM sleep. The apparent serotonin-REM sleep association is discussed in light of recent animal experiments in which total insomnia was produced by decreasing brain serotonin concentration with parachlorophenylalanine. (French summary) (22 ref.)—*Journal summary.*

Drug Effects-Animal

10388. Altland, Paul D., Highman, Benjamin; Parker, Milton G., & Dieter, Michael P. (National Inst. of Health, National Inst. of Arthritis & Metabolic Diseases, Bethesda, Md.) **Serum enzyme, corticosterone and tissue changes in rats following a single oral dose of ethanol.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 281-287.—Describes the "effects of graded dose of ethanol in male Sprague-Dawley rats on certain serum enzymes of the Krebs cycle and of the glycolytic pathway, commonly used in clinical diagnosis of diseases, and attempts to correlate the enzyme changes with changes in corticosterone levels and tissue structure." Ss weighing 275-325 gm. were given ethanol by stomach tube, in amounts of 2, 4, 4.7, or 6 gm/kg of body weight, and were killed for study 5 hr. later. To establish control values Ss were given 38 ml. of water/kg by stomach tube. The ethanol produced a rise in serum glutamic oxaloacetic transaminase and glutamic pyruvic transaminase. It is suggested that results are "due to a change in cellular permeability caused by ethanol and by associated hormonal alterations." (18 ref.)—*S. R. Diamond.*

10389. Barlow, R. B., Oliverio, A., Satta, M., & Thompson, G. M. (U. Edinburgh, Scotland) **Some central effects in mice of compounds related to nicotine.** *British Journal of Pharmacology*, 1970(Jul), Vol. 39(3), 647-652.—Tested some hydroxy-, amino-, and methoxyphenylalkyltrimethylammonium compounds, and β -pyridylmethyl-, dimethylamine and pyrrolidine, and β -pyridylethyltrimethylammonium, were tested on avoidance learning in male mice of the DBA/2J strain and their effects were compared with those of (-)-nicotine. The o- and m-hydroxybenzyl-, o-hydroxynicotine. The o- and m-hydroxyphenylpropyltrimethylammonium compounds improved performance; (-)-nicotinium compounds improved performance. The m- and p-tine, in 1/4 of the dose, had similar effects. The m- and p-aminobenzyl, and o-, m-, and p-aminophenethyl-, trimethylammonium compounds impaired performance. (-)-Nicotine and m-hydroxyphenylpropyltrimethylammonium appeared also to enhance memory consolidating processes. The central actions of some of the compounds suggest the possibility that they can penetrate into the CNS even though they are quaternary salts. No correlation was found between the effects of the compounds on avoidance learning and on the frog rectus muscle. Though the differences may be due to differ-

ences in access to the CNS, it is also possible that the receptors associated with learning processes are different from those in the frog rectus and possibly more specialized.—*Journal abstract.*

10390. Benešová, O. (Inst. of Pharmacology, Medical Faculty of Hygiene, Prague, Czechoslovakia) **Is it possible to predict the clinical effect of antidepressants from experimental data in animals?** *Activitas Nervosa Superior*, 1970(May), Vol. 12(2), 127-128.—An analysis of experimental data from the author and other pharmacological laboratories was correlated with published clinical reports and the same sequence of decreasing activity in biochemical tests of noradrenaline uptake inhibition as in antiserpine and antitetraabenazine tests was found. The sequence of anticholinergic action estimated by the tests of antiphsostigmine, antinicotine, and antitremorine is just the opposite. (21 ref.)—*H. Bruml.*

10391. Crow, Lowell T., Story, Randall J., & Engels, David T. (Western Washington State Coll.) **Effect of pitressin on voluntary alcohol consumption in the rat.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 950.—Maintained 18 male Holtzman albino rats on an alternate day presentation schedule in which 1 of 3 ethanol concentrations (6, 12, or 24% by volume) was the sole liquid source. The effects upon this alcohol intake of ip injections of vasopressin synthetic or pitressin tannate in amounts of 1, 2½, or 5 units were observed. Results show no significant differences in alcohol consumed as a function of any drug condition imposed.—*Author abstract.*

10392. Davidson, W. J. & Innes, I. R. (U. Manitoba, Medical School, Winnipeg, Canada) **Dissociation of potentiation of isoprenaline by cocaine from inhibition of uptake in cat spleen.** *British Journal of Pharmacology*, 1970(May), Vol. 39(1), 175-181.—Studied the effects of 10 µg/ml. cocaine hydrochloride, potentiated isoprenaline, and noradrenaline in isolated spleen strips from normal cats and from cats treated with reserpine 24 hr. previously. Isoprenaline was taken up almost as well as noradrenaline by spleen strips from cats treated with reserpine. Cocaine blocked uptake of noradrenaline but did not reduce uptake of isoprenaline. Drug concentrations used in these studies were the same as in potentiation experiments. It is concluded that inhibition of uptake is not the mechanism by which cocaine potentiates the effect of isoprenaline on the spleen and might be only a contributory factor in the case of noradrenaline potentiation. (26 ref.)—*Journal abstract.*

10393. Follenfant, M. J. & Robson, R. D. (Wellcome Research Lab., Beckenham, England) **The antagonism of adrenergic neurone blockade by amphetamine and dexamphetamine in the rat and guinea-pig.** *British Journal of Pharmacology*, 1970(Apr), Vol. 38(4), 792-801.—In isolated male albino rat mesentery preparations, intraarterial injection of the following drugs rapidly suppressed vasoconstrictor responses to sympathetic nerve stimulation: bretylium, guanethidine, and bethanidine; with phenoxypropylguanidine the onset of blockade was slower. The blockade caused by these or higher concentrations was rapidly abolished by intraarterial injection of amphetamine as also was the blockade caused by infusing bretylium or guanethidine for 10-20 min. Partial blockade was produced by reserpine and was only slightly and briefly antagonized by amphetamine. In mesentery preparations taken from

Ss 24 hr. after subcutaneous injection of bretylium, guanethidine, phenoxypropylguanidine, or reserpine, responses to sympathetic nerve stimulation were greatly impaired. In rat mesentery, amphetamine did not cause vasoconstriction but briefly potentiated the vasoconstrictor effect of sympathetic nerve stimulation. Responses to noradrenaline were not importantly affected. The contractile responses of the rat inferior eyelid caused by stimulation of the cervical sympathetic nerve was greatly reduced 17-27 hr. after subcutaneous injection of bretylium, bethanidine, guanethidine, or reserpine. Iv dexamphetamine powerfully antagonized the effect of bretylium, weakly antagonized the blockade by bethanidine and guanethidine, and caused no change in the response of reserpine-treated Ss. The vas deferens taken from guinea pigs 24 hr. after subcutaneous injection of either bretylium or guanethidine showed greatly impaired responses to hypogastric nerve stimulation. Amphetamine largely restored the contractile response in bretylium-treated rats but caused only weak antagonism in the guanethidine-treated animals. (18 ref.)—*Journal abstract.*

10394. Guselnikova, K. G., Voronkov, G. S., Tsitolovskii, L. E., & Engovatov, V. V. (Moscow State U., USSR) **Vnutrikletochnoe i farmakologicheskoe issledovanie vyzvannykh voln obonyatel'noi lukovitsy lyagushki.** [An intracellular and pharmacological study of evoked waves in the frog olfactory bulb.] *Biologicheskie Nauki*, 1968(Oct), No. 10, 28-31.—Imobilized frogs (*Rana temporaria* L.) were used in a study of electrically evoked waves in the olfactory bulb, utilizing (a) pharmacological analysis (strychnine, adrenaline, noradrenaline), and (b) direct registration of intracellular changes of potential in the olfactory bulb neurons during emergence of the evoked waves, in order to investigate the genesis of the rhythmic processes of the vertebrate olfactory analyzer. Strychnine depressed the waves to 40-80% of the initial magnitude; adrenaline, on the contrary, increased their amplitude. A direct correlation between inhibitory postsynaptic potentials and evoked wave frequency was found in intracellular recordings. It is suggested that the formation of the evoked waves in the frog olfactory bulb is attributable primarily to summated inhibitory postsynaptic potentials.—*I. D. London.*

10395. Hillbom, M. E. (State Alcohol Monopoly (Alko), Research Lab., Helsinki, Finland) **Thyroid state and voluntary alcohol consumption of albino rats.** *Acta Pharmacologica et Toxicologica*, 1971, Vol. 29(1), 95-105.—27 male Wistar rats were made hypo- and hyperthyroid in a 3-wk period by the daily administration of propylthiouracil or 3,3',5-triiodo-L-thyronine, and the Ss' voluntary alcohol consumption was investigated. The triiodothyronine treatment increased, and propylthiouracil treatment decreased the total caloric intake of the Ss. However, the portion of ethanol in the total caloric intake of the Ss was significantly increased by propylthiouracil treatment and significantly decreased by triiodothyronine treatment while the total caloric intake did not correlate positively with the voluntary alcohol consumption. The absorption of ethanol from the intravascular space, the peritoneal cavity, and the gastrointestinal tract as well as the rate of elimination of ethanol were increased by triiodothyronine treatment and decreased by propylthiouracil treatment. The acetaldehyde concentration during oxidation of ethanol was found to be higher (166 ± 22

nmol/ml of blood) in the hepatic venous blood of euthyroid Ss, as compared with hypo- and hyperthyroid ones. Acetaldehyde accumulation was not found to be a factor regulating voluntary alcohol intake. (36 ref.)—*Journal abstract.*

10396. Hodges, J. R. & Mitchley, Susan. (Royal Free Hosp., Medical School, London, England) **The effect of betamethasone on circadian and stress-induced pituitary-adrenocortical function in the rat.** *British Journal of Pharmacology*, 1970(Apr), Vol. 38(4), 719-724.—Abolished both the circadian and stress-induced changes in plasma corticosterone concentration by the inclusion of betamethasone in the drinking water of rats. Ss were 200 male Sprague-Dawley rats. Adrenal sensitivity to exogenous corticotrophin was unimpaired by the betamethasone treatment. The normal circadian rhythm in plasma corticosterone returned within 1 day of withdrawal of the steroid, but the response to stress was normal only after 3 days. The possible significance of these observations is discussed. (22 ref.)—*Journal abstract.*

10397. Jones, B. E., Essig, C. F., & Creager, W. (National Inst. of Mental Health, Addiction Research Center, Lexington, Ky.) **Intraventricular infusion of ethanol in dogs: Effect on voluntary alcohol intake.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 288-292. Attempted to increase the voluntary drinking of ethanol in dogs via chronic intraventricular infusion of ethanol. 6 adult mongrel beagles were kept in individual cages in the same room. Each cage was fitted with 2 drinking pans, 1 containing tap water and the other a 10% solution of ethanol in tap water. Ss were operated on and a steel cannula permanently implanted into the left lateral ventricle. For 14-19 days following surgery a modified Locke-Ringer's solution was infused in 5 Ss. In 4 Ss the solution was continued for 29-50 days. 2 Ss received still more infusions with higher ethanol concentrations. Only 1 showed voluntary consumption of the ethanol solution during the ethanol infusion period in excess of the Locke-Ringer's infusion control period.—*S. R. Diamond.*

10398. Karadžić, V. (Belgrade Medical School, Yugoslavia) **Para-chlorophenylalanine and sleep in cats.** *Archives of Biological Sciences*, 1968, Vol. 20(1-2), 37-41.—Examined the effect of parachlorophenylalanine (PCPA), a tryptophan hydroxylation inhibitor, on sleep and alterations in 4 male cats. EEG, EMG, and eye movement registrations were made during an 8:16 hr. sleep and waking regime. PCPA reduced sleeping time and increased wakefulness during the 1st 48 hr. after the 150 mg/kg injection. Reduction of slow wave sleep was 32% below control values immediately after injection, and then proceeded to rise both absolutely and as a percentage of total sleeping time. Since PCPA depletes brain serotonin, it seems highly probable that serotonin is involved in the sleep control mechanism. Correlations between amount of sleep and serotonin level should be determined. Rapid normalization of sleep suggests serotonin reduction may be only partial.—*W. G. Breiting.*

10399. Kral, Paul A. (Parsons Research Center, Kan.) **Effects of scopolamine injection during CS-US interval on conditioning.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 690.—20 male Sprague-Dawley rats learned to avoid sweet water when illness was induced $\frac{1}{2}$ hr. after drinking. Since ECS interpolated during the taste-illness interval was previously shown to

impede learning and lower brain acetylcholine (ACh), cholinergic mediation of the interstimulus interval was hypothesized. Scopolamine (an ACh inhibitor) was injected instead of ECS but failed to retard learning. Scopolamine itself acted as an aversive US, confounding any affect of ACh depression on learning.—*Author abstract.*

10400. Leonard, B. E. & Tonge, Sally R. (ICI, Ltd., Pharmaceuticals Div., Macclesfield, England) **Some effects of an hallucinogenic drug (phencyclidine) on neurohumoral substances.** *Life Sciences*, 1970(Oct), Vol. 9(20, Pt. 1), 1141-1152.—Hallucinogens may owe some of their central activity to actions on the monoamine systems of the brain, however, a definite relationship between disturbed monoamine metabolism and hallucinogenesis has not been established. To investigate the possibility of other neurohumoral substances being affected by a hallucinogen phencyclidine was administered ip to Wistar rats at 10 mg/kg. Gross behavioral effects included agitation, confusion, head shaking, backing movements, and inability to escape from their home cage by climbing. Acetylcholine levels, cholinesterase activity, histamine concentration, and glutamic acid concentrations were unaffected by the phencyclidine injection. A significant depletion of gamma-aminobutyric acid (GABA) occurred in the injected Ss. The fact that the metabolism of other neurohumours, other than GABA, is not affected by the hallucinogen phencyclidine provides some negative evidence for the involvement of the monoamines in hallucinogenesis. (29 ref.)—*W. E. Wood.*

10401. Lewander, Tommy. (U. Uppsala, Ulleråker Hosp., Sweden) **Displacement of brain and heart noradrenaline by p-hydroxynorephedrine after administration of p-hydroxyamphetamine.** *Acta Pharmacologica et Toxicologica*, 1971, Vol. 29(1), 20-32.—After the administration of p-hydroxyamphetamine (p-OH-A) 20 mg/kg ip, there was a 50% decrease in the brain noradrenaline (NA) level and a 70% decrease in the heart NA level at 4-8 hr. after the injection. Ss were male Sprague-Dawley rats. Control levels of brain and heart NA were reached at 96-144 hr. after a single dose of the drug. Repeated injections of p-OH-A, 20 mg/kg twice daily for 3 days, caused a depletion of brain and heart NA to about 20% of the control levels. The brain dopamine (DA) level was reduced to 85% of the control level at 1 hr. after 20 mg/kg of the drug and to 76% after 40 mg/kg. After the repeated injections of p-OH-A, the brain DA was reduced to 70% of the control level. Radioactively labeled p-hydroxynorephedrine was isolated from both brain and heart tissue extracts after the administration of p-hydroxyamphetamine- 3 H. Parahydroxynorephedrine- 3 H remained in the brain and the heart as long as the NA levels were decreased. The NA deficit in the brain and heart corresponded approximately to the amounts of p-hydroxynorephedrine- 3 H present in the tissues. In reserpine pretreated Ss the amounts of p-hydroxynorephedrine- 3 H formed in the brain and heart tissues were reduced, indicating that p-hydroxynorephedrine is bound by a reserpine sensitive storage mechanism. Administration of p-OH-A or amphetamine accelerated the disappearance of labeled p-hydroxynorephedrine from the brain and the heart. (27 ref.)—*Journal abstract.*

10402. Lewander, Tommy. (U. Uppsala, Ulleråker Hosp., Sweden) **On the presence of p-hydroxynorephedrine in the rat brain and heart in relation to**

changes in catecholamine levels after administration of amphetamine. *Acta Pharmacologica et Toxicologica*, 1971, Vol. 29(1), 33-48.—The brain and heart noradrenaline (NA) in male Sprague-Dawley rats was maximally decreased by 28-52% at 3-12 hr. after 20 mg/kg ip of dl-amphetamine- SO_4 . Control levels of NA were not reached until 96 hr. after a single injection of amphetamine, while the drug disappeared from the brain and plasma within 12 hr. Amphetamine was found to disappear from rat tissues in a polyphasic pattern after ip administration. The brain/plasma ratio was $9 \pm .3$ (mean \pm standard deviation). Parahydroxynorephedrine was identified in the brain and heart as a metabolite of the d-isomer of amphetamine. Parahydroxynorephedrine, the apparent $T_{1/2}$ of which was estimated to be about 22 hr., seems to be responsible for the prolonged depletion in the brain and heart NA levels caused by amphetamine. However, there was not an exact stoichiometric relation between the NA deficit and the amount of p-hydroxynorephedrine present. After pretreatment with desmethylimipramine, which inhibits the parahydroxylation of amphetamine, the NA in the brain and heart was decreased by amphetamine but already returned to control levels in about 12 hr. It is concluded that the persistent depletion of brain and heart NA induced by amphetamine is caused by the incorporation of p-hydroxynorephedrine as false transmitter into NA neurons. (35 ref.)—*Journal abstract*.

10403. Matveev, V. F. (Moscow Medical Stomatological Inst., USSR) Patomorfologicheskie izmeneniya v golovnom mozgu pri dliitel'nom sochetannom yvedenii lizergamida (LSD-25) i galoperidola: Eksperimental'no-morfologicheskie issledovaniya: II. [Pathomorphological changes in the brain resulting from prolonged combined administration of lysergamide (LSD-25) and haloperidol: An experimental-morphological investigation: II.] *Zhurnal Nevropatologii i Psikiatrii*, 1971(Feb), Vol. 71(2), 255-261.—In this continuation of an earlier report (see V. F. Matveev, PA, Vol. 46:590), a 28-day study was conducted during which 100 3-mo-old rats were given 40 mg/kg LSD-25 im daily followed by 1 mg/kg haloperidol 15 min. later over a period of up to 10 days or more than 10 days, with separate groups of Ss sacrificed at the end of each wk. for pathomorphological analysis. In the 1st case, haloperidol plus LSD-25 protected the cerebral neurons from the toxic action of the latter. Morphological changes were in this case characterized by a sharp increase in the compensatory-restoratory processes: swelling and hypertrophy of the neuronal body, nuclei, and nucleoli, and enhancement of interneuronal activity. In the 2nd case, haloperidol plus LSD-25 exerted a neurotoxic action. Prolonged administration produced dystrophic effects in the cerebral neurons in the form of total chromatolysis and cytoplasmic vacuolization, leading to the destruction of the neurons as a result of marked cytolysis. The most pronounced changes were observed in the ganglionic cells of the cortex, thalamus, and hypothalamus and were reminiscent of chronic LSD-25 intoxication. (English summary) (17 ref.)—I. D. London.

10404. Poletaeva, I. I. (Moscow State U., USSR) Rol' nekotorykh podkorkovykh struktur v generatsii ritma napryazheniya elektroentsefalogrammy krolika. [Role of some subcortical structures in the generation of theta rhythm in the rabbit electroencephalogram.] *Biologicheskie Nauki*, 1968(Dec), No. 12, 31-34.—22

rabbits were Ss in a study to determine whether the exclusion of the nonspecific structures of the thalamus (e.g., centrum medianum) and the central gray matter of the midbrain affects the genesis of θ rhythm. Canular introduction of small quantities of a concentrated solution of novocaine into the septum (13 Ss), medial thalamus (3 Ss), and anterior portion of the central gray matter of the midbrain (6 Ss) produced a reversible disappearance of θ rhythm in leads from all sections of the brain. The exclusion of θ rhythm was accompanied by an increase in rhythmic synchrony with flashing light (frequency, 9-20 sec.). In some cases the introduction of novocaine evoked a sharp increase in θ rhythm, accompanied by a weakening of rhythmic synchrony. The results are taken as evidence for a possible inhibitory role for structures participating in the generation of θ rhythm. In the normal state it would be masked by the excitatory influence of the ascending activating system. (17 ref.)—I. D. London.

10405. Radulovacki, M. & Rabe, F. Intraventricular administration of sodium chloride and appearance of paradoxical sleep in cats. *Archives of Biological Sciences*, 1968, Vol. 20(1-2), 43-45.—Assuming that hypertonic osmolarity of the blood caused by administration of hypertonic sodium chloride affects the osmolarity of the cerebrospinal fluid, the relationship between intraventricular administration of various sodium chloride concentrations and their possible connection with the appearance of paradoxical sleep was investigated. All concentrations produced initial desynchronization in the EEG followed by synchronized sleep while seizure phenomena were noticed at the dose of 25-mg NaCl/100 ml distilled water. Paradoxical sleep episodes were observed after 35 min. at the dose of 15-mg NaCl. Data might indicate a relation between sodium chloride concentration in cerebrospinal fluid and the appearance of paradoxical sleep episodes.—W. G. Breiterer.

10406. Schildkraut, Joseph J. & Efron, Daniel H. (Massachusetts Mental Health Center, Boston, Mass.) The effects of Δ^9 -tetrahydrocannabinol on the metabolism of norepinephrine in rat brain. *Psychopharmacologia*, 1971, Vol. 20(2), 191-196.—Administered Δ^9 -tetrahydrocannabinol (Δ^9 -THC), approximately 80 mg/kg, to male Sprague-Dawley rats by ip injection. This dose was found to cause an accelerated rate of disappearance of intracisternally administered norepinephrine- H^3 from the brain and a small increase in the uptake of norepinephrine- H^3 in the brain. In contrast to most stimulants, euphorants, or antidepressants (e.g., cocaine or amphetamine, MAO inhibitors, and tricyclic antidepressants), Δ^9 -THC appeared to cause no decrease in the deamination of norepinephrine- H^3 in brain. Levels of endogenous norepinephrine in brain tended to be slightly lower, whereas levels of endogenous serotonin were slightly higher in Ss treated with Δ^9 -THC than in matched controls. Behavioral effects were observed and are described.—*Journal abstract*.

10408. Sterescu-Volanschi, Margareta & Floru, R. (Academy of Medical Sciences, Bucharest, Romania) Effects of lysergic acid diethylamide (LSD₂₅) on short-term memory in cat. *Revue Roumaine de Physiologie*, 1970, Vol. 7(3), 225-234.—Studied the

effects on 10 cats of LSD₂₅, administered chronically on the alimentary motor delayed response to a visual stimulus (sight of food) as an index of short-term memory. While small doses of LSD₂₅, administered 30 min. before the experiment, increased the delayed-response performance at 5-sec delay intervals, large doses decreased this performance. In contrast to the performance-increasing effect at 5-sec delay intervals, performance-decreasing effects were noted at longer delay intervals with the same dosage, and were statistically significant. The decreased number of responses adequately directed toward the alimentary reinforcement locus, induced by LSD₂₅, persisted for 7-10 days after the drug had been discontinued. The effect of LSD₂₅ on the function of the visual analyzer is discussed. (44 ref.)—*Journal abstract*

10409. Stevenson, I. H. & Turnbull, M. J. (U. Dundee, Dept of Pharmacology & Therapeutics, Scotland) **The sensitivity of the brain to barbiturate during chronic administration and withdrawal of barbitone sodium in the rat.** *British Journal of Pharmacology*, 1970(Jun), Vol. 39(2), 325-333. —Determined the sensitivity of the CNS to barbiturate in female Wistar rats during the chronic administration of barbitone sodium and after its withdrawal. The brain barbiturate concentration determined on awakening from a hypnotic dose administered ip was found to increase throughout the period of barbitone administration. A similar gradual development of CNS tolerance was indicated by measuring the duration of anesthesia following an intraventricular injection of pentobarbitone. The change in sensitivity of the brain which occurred during the period of barbitone administration was not demonstrable from the measurement of sleeping time following ip injection of barbitone or pentobarbitone. After withdrawal, the sensitivity of the brain to barbiturate gradually returned to normal. It is concluded that the hypersensitivity to pentobarbitone, but not to barbitone, which develops after withdrawal of barbitone sodium is due to a decreased drug-metabolizing capacity.—*Journal abstract*

10410. Tagliamonte, A., Tagliamonte, P., & Gessa, G. L. (U. Cagliari, Italy) **Reversal of pargyline-induced inhibition of sexual behaviour in male rats by p-chlorophenylalanine.** *Nature*, 1971(Mar), Vol. 230(5291), 244-245. —Investigated the alleged ability of p-chlorophenylalanine (PCPA) to counteract reduced sexual activity produced by pargyline (an MAO inhibitor) to accumulation of brain serotonin. Male 140-150 day old Sprague-Dawley rats were housed individually and exposed to 14 hr. of light and 10 hr. of darkness. Mating tests (consisting of placement of a female in artificially-induced estrus in a cage containing a male during a 2-hr period of dim light) were carried out. The following parameters were observed: (a) the percentage of Ss copulating at least once within 30 min., (b) the percentage of Ss ejaculating at least once within 60 min. after exposure, and (c) the mean number of ejaculations prior to reaching exhaustion. Exhaustion was defined as having occurred when more than 30 min. lapsed between ejaculations. Rats were allocated into 4 groups: (a) untreated controls, (b) Ss receiving 80 mg/kg pargyline 8 hr. prior to testing, (c) Ss receiving 4 daily doses of PCPA (100 mg/kg), and (d) Ss receiving both PCPA and pargyline in same dose schedule as Groups b and c. Results reveal that: (a) 63% of controls copulated and 53% ejaculated, (b) only 3 pargyline-treated Ss copulated

and none ejaculated, and (c) all PCPA-pretreated Ss copulated and 90% ejaculated. Treatment with PCPA alone increased both the number of copulations and ejaculations. It is concluded that pargyline-induced inhibition of sexual behavior in male Ss is secondary to accumulation of brain serotonin. (16 ref.)—*B. A. Stanton*

10411. Us, Z. G. & Bozhko, G. Kh. (Kharkov Research Inst. of Neurology & Psychiatry, USSR) **Deistvie syvorotki krovi bol'nykh shizofreniei na obnovenie belkov mozga krys.** [Action of schizophrenic blood serum on protein renewal in the rat brain.] *Zhurnal Nevropatologii i Psikiatrii*, 1971(Feb), Vol. 71(2), 253-255. —Compared the changes in rates of protein renewal (indexed by radioactive methionine) in the rat brain when acted upon by blood serum drawn from 30 donors with continuous (6) and recurrent (24) schizophrenia (in the acute period of the latter form of the psychosis, 12, and during associated, 6, and dissociated, 6, remission). 42 Ss were subjected to ip administration of the serum. 12 normal human donors and 8 intact rats served as controls. In the case of remittent schizophrenia in the acute period and in the case of the continuous form of the psychosis, the serum reduced the levels of protein metabolism in the cerebellum, hypothalamus, and the cerebral hemispheres. The serum of schizophrenics during dissociated remission produced the same effects. No changes were observed during associated remission. (English summary)—*I. D. London*

10412. Vedernikov, Yu. P. (Sverdlovsk State Medical Inst., USSR) **Interaction of amphetamine, apomorphine, disulfiram with morphine and the role played by catecholamines in morphine analgesic action.** *Archives Internationales de Pharmacodynamie et de Therapie*, 1969(Nov), Vol. 182(1), 59-64. —Groups of 10 white rats (tolerant and nontolerant to morphine) were used in a study producing evidence to support the role of catecholamines in the brain in morphine analgesic action, estimated through change in threshold for pain in response to mechanical pressure of the tail (the squeak reaction). Evidence was obtained on the role of the central adrenergic mechanism in morphine analgesic action. High doses of apomorphine (30 mg/kg) or amphetamine (10 mg/kg) produced stereotyped behavior and elevation of the threshold for pain. The influence of morphine on this threshold was significantly decreased for 5-6 hr. after such dosage. Disulfiram was antagonistic to morphine analgesic action, 2 mg/kg amphetamine, given 1 hr. before morphine, abolished the antagonistic action of both disulfiram and high doses of amphetamine and apomorphine against morphine analgesic action in Ss tolerant and nontolerant to morphine. (20 ref.)—*I. D. London*

10413. Vedernikov, Yu. P. & Afrikanov, I. I. (Moscow State U., USSR) **On the role of a central adrenergic mechanism in morphine analgesic action.** *Journal of Pharmacy & Pharmacology*, 1969, Vol. 21, 845-847. —Groups of 10 white rats were Ss in a study to determine the relation between drugs which interfere with noradrenaline metabolism in the brain and morphine analgesic action, utilizing tail pressure to assess the influence of the former. Central adrenergic stimulation, produced by apomorphine, cocaine, pyrogallol, or amphetamine led to stereotyped behavior and elevation of the threshold for pain. Lower doses of these drugs potentiated morphine analgesic action: Reserpine,

iproniazid, and disulfiram weakened this action; α -methyl dopa increased the action, but (\pm)-tryptophan did not influence it significantly. It is concluded that: (a) Central sympathetic activation can elevate the threshold for pain. (b) Drugs, increasing noradrenaline concentration at the receptor sites, potentiate morphine analgesic action, while drugs which decrease it, weaken the action. (c) Morphine analgesia results from the freeing of noradrenaline from brain stores. (d) While a direct action of morphine on the central adreno-structures may be involved, this mechanism is of less importance. (20 ref.)—*I. D. London.*

10414. Vernadakis, Antonia. (U. Colorado, Medical Center, Denver) **Effects of chlorpromazine on convulsive responses in developing rats.** *Experimental Neurology*, 1970(Dec), Vol. 29(3), 473-482.—Injected 28 litters of female Sprague-Dawley rats with various doses of chlorpromazine (CPZ), either at 6, 13, 20 or 29 days after birth, and studied responses to maximal electroshock stimulation during maturation. Each litter consisted of controls and Ss treated with 3, 15, 30, and 60 mg CPZ/kg. The durations of hind limb flexion were generally longer and extension shorter in Ss receiving CPZ at 6 or 20 days. In Ss receiving CPZ at 13 days, the durations of flexion were shorter and extension longer than those observed in appropriate controls. No changes were observed in 29-day-old CPZ-treated Ss. It is concluded that CPZ administered to developing rats has both stimulant and depressant effects, which appear to be age dependent (19 ref.)—*Journal abstract.*

10415. von Bahr, Christer & Borgå, Olof. (Karolinska Inst., Div. of Clinical Pharmacology, Stockholm, Sweden) **Uptake, metabolism and excretion of desmethylimipramine and its metabolites in the isolated perfused rat liver.** *Acta Pharmacologica et Toxicologica*, 1971, Vol. 29(4), 359-374.—Used male Sprague-Dawley rats as liver and blood donors and the perfused livers of male homozygous GUNN rats to study the metabolism of the tricyclic antidepressant drug, desmethylimipramine (DMI). Extraction procedures were developed which allowed a separation of DMI and its hydroxylated and conjugated metabolites. DMI and its metabolites were measured in perfusate plasma, liver, and bile. DMI (a) disappeared quickly from the plasma and reappeared in high concentrations in liver, bile, and red corpuscles; (b) was highly bound to proteins in perfusate plasma; and (c) was bound to the microsomal fraction of the liver cell. The conjugated metabolites (a) were not bound at all, (b) were not present in red blood corpuscles, (c) occurred in considerable amounts in perfusate plasma and bile, and (d) appeared mainly in the cytoplasm of the liver cell. Unconjugated hydroxylated metabolites were found in only small amounts in perfusate plasma, liver, and bile. (34 ref.)—*Journal abstract.*

CARDIOVASCULAR PROCESSES

10417. Bondy, Stephen C. & Morelos, Beatrice S. (U. Colorado, Medical Center, Denver) **Stimulus deprivation and cerebral blood flow.** *Experimental Neurology*, 1971(May), Vol. 31(2), 200-206.—Studied the effect of unilateral visual deprivation on the vascular

system of brain regions in white Leghorn chicks. Radioactivity within optic lobes and cerebral hemispheres was assayed, to estimate the velocity of blood flow or the plasma volume. As early as 1 hr. after monocular deprivation by eyelid suture or enucleation, significant deficits in the velocity of the circulation through the contralateral brain regions were observed, were maintained for at least 6 days, and were of similar magnitude in contralateral optic lobes and cerebral hemispheres. After 1 hr. of either form of monocular deprivation, a reduced plasma volume was found in contralateral optic lobes but not in cerebral hemispheres. Data suggest that maintenance of optimal cerebral vascular supply may be dependent on a patterned sensory input to the brain. A deficiency in the complexity of cerebral afferentation in the young animal may impair adequate vascularity and thus retard maturation.—*Journal abstract.*

10419. Hossmann, K. A. & Sato, K. (Max Planck Inst. for Brain Research, Cologne, W. Germany) **Effect of ischaemia on the function of the sensorimotor cortex in cat.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jun), Vol. 30(6), 535-545. Produced transient cerebral ischemia of 20 min. to 2 hr. in normothermic cats by clamping the innominate and subclavian arteries and simultaneous lowering of the systemic blood pressure, or by interrupting the blood supply to Ss with extracorporeal circulation. 23 experiments were made with 35 adult Ss. After ischemia high systemic blood pressure was maintained to assure the adequate blood recirculation of the brain. The effect of ischemia on the sensorimotor cortex was studied by recording the spontaneous EEG and the pyramidal response (PR) to electrical stimulation of the cortex. When ischemia was produced by clamping the innominate and subclavian arteries the EEG was suppressed after 12.8 ± 3.8 sec., the I wave of the PR after 181 ± 51 sec., and the D wave after 261 ± 50 sec. In Ss with extracorporeal circulation, the suppression time of the EEG was 16.9 ± 5.7 sec., of the I wave 178 ± 37 sec., and of the D wave 271 ± 50 sec. Under optimal conditions the D wave reappeared as early as 7 min. after ischemia of 1 hr., the I wave after 25 min., and the EEG after 45 min. Even after ischemia of 1.5 hr., and I and D waves reappeared, and the D wave transitorily after ischemia of 2 hr. Results confirm that basic neuronal functions may reappear after complete ischemia of more than 1 hr. (German summary) (35 ref.)—*Journal summary.*

10420. Wolin, L. R., Massopust, L. C., & Taslitz, N. (Cleveland Psychiatric Inst., Lab. of Neuropsychology & Neurophysiology, O.) **Tolerance to arrest of cerebral circulation in the rhesus monkey.** *Experimental Neurology*, 1971(Jan), Vol. 30(1), 103-115.—Subjected 20 rhesus monkeys (*Macaca mulatta*) to periods of arrest of cerebral blood flow varying from 4-15 min. Arrest was accomplished by placing ligatures around the carotid and vertebral arteries. A drainage cannula in 1 carotid artery served to remove blood reaching the circle of Willis via anastomotic routes. After clamping the vessels, EEG ceased within 25 sec. After reestablishment of blood flow to the brain, the EEG reappeared anywhere from 30 min. to 5 hr. depending on the duration of the

arrest period. Ss subjected to periods of cerebral arrest up to 13 min. showed no neurologic or behavioral deficits on the 2nd postoperative day. The S subjected to 14-min arrest retained motor deficits even 2 mo. postsurgically. 3 Ss subjected to 15 min. of arrest failed to survive. It is concluded that controlled cerebral arrest up to 12 or 13 min. appears to be relatively safe in the primate, while longer periods result in permanent neurologic deficits or death. (21 ref.)—*Journal abstract.*

ENVIRONMENT & STRESS

10421. Atherley, G. R., Gibbons, S. L., & Powell, J. A. (U. Salford, England) **Moderate acoustic stimuli: The interrelation of subjective importance and certain physiological changes.** *Ergonomics*, 1970(Sep), Vol. 13(5), 536-545. —Conducted a preliminary study with 14 male and 14 female Ss to determine the interrelation between moderate acoustical stimulation and certain physiological changes, using the Wilcoxon Matched-Pairs Signed-Ranks Test. It was shown that "subjective importance" of the noise was a material factor effecting changes in skin resistance. Further studies were made of the effect of whole-day exposure to aircraft, typewriter, and white noise. The noises of high subjective importance, the aircraft and the typewriter, both showed measurable physiological changes, whereas that of low subjective importance (white noise) showed no significant change compared with control levels. Estimations from 4 university staff Ss with sedentary occupations showed a marked decrease in 24-hr urinary 17-ketosteroid and eosinophils, and an increase in total white cell count, lymphocytes, and neutrophils. It is suggested that moderate noise does not act as a conventional stressor and that it may result in a characteristic syndrome which is comparable with a mild form of anxiety-depression. Fröberg, Jan, et al. **Conditions of work and their influence on psychological and endocrine stress reactions.** *Reports from the Laboratory for Clinical Stress Research, Karolinska Sjukhuset*, 1969(Oct). No. 8, 18 p.—Describes 3 investigations subjecting groups of Ss to a variety of stimuli including laboratory as well as real-life stressors. Ss were military personnel as well as male and female office workers. The stress situations used are prolonged sleep deprivation, experimental modification of real life stressors, and natural changes in the work environment. Stressor conditions of a relatively short duration and of an intensity far below what most people are exposed to now and then during everyday work may provoke marked changes in bodily function. If often repeated or occurring under lengthy periods of time, these changes might be of pathogenic significance. In an experiment on piecework, the results point to a subjective as well as objective state of stress. S. R. Diamond.

10424. Kennedy, Robert S. Two procedures for applied and experimental studies of stress. *USN AMI Army-Navy Joint Report*, 1970(Feb), No. 1099, 13 p.—Offered 2 methods to compensate for the low reliability of physiological manifestations of sympathetic nervous system activity. The 1st requires a major

research program by which a valid criterion of stress would be determined by experimentation, and then predictors of this criterion would be obtained empirically by correlational techniques. These predictors could then be cross-validated. By using the predictors, the influences of psychological stress and physiological stress could be separated. Whether a functional relationship exists between the magnitude of the response to stress and the probability of its occurrence could then be determined. The 2nd method is similar but less exact. It has been used successfully in motion sickness studies and avoids the necessity of a long exploratory program with numerous pilot studies. A procedure for the control and the regulation of the perception of the magnitude of the stress to the organism (human and infrahuman) is offered for use with the 2 methods. The lack of suitable control of this factor is discussed in connection with previous research. (31 ref.)—*Journal abstract*

(Rockefeller U., New York, N.Y.) **Behavioral and neurochemical effects of acute swim stress are due to hypothermia.** *Life Sciences*, 1970(Aug), Vol. 9(15, Pt. 1), 877-888. -To determine whether hypothermia is the immediate cause of the behavioral and central noradrenergic changes produced by cold-water swimming stress, male albino Sprague-Dawley rats were swim-stressed in cold water (14.5° C) for 30 min. Rewarming utilized a water bath maintained at 38° C for 30 min. Swim-stress in warm water (37° C) was also used. Brain norepinephrine and dopamine depletion produced by α -methyltyrosine (AMT) and reserpine was examined in the stressed Ss. Rapid rewarming reversed the hypothermia, behavioral inactivity, shivering, eye closure, reduction in brain norepinephrine concentrations, and the increased retention of radioactive norepinephrine. Warm-water swimming produced none of the results seen in cold-water swimming, showing that the behavioral and neurochemical effects of the stress are produced by phenomena occurring during hypothermia. Swim-stress in cold water interfered with the depleting actions of both AMT and reserpine on brain norepinephrine and dopamine, supporting the suggestion that this stress decreases the synthesis and utilization, while increasing the binding, of brain norepinephrine. It is suggested that the behavioral state seen in the rat during hypothermia may be similar to withdrawal reactions seen in primates and humans after severe stress. (23 ref.) -W. E. Wood.

(Nencki Inst. of Experimental Biology, Warsaw, Poland) **Effects of alimentary reflexes on motor gastric activity.** *Acta Biologica Experimentalis*, 1969, Vol. 29(1), 63-74.—In 3 dogs subjected to routine alimentary CR experiments, the motor activity of the stomach was observed throughout each session. Reinforcement was maintained with 50-gm cubes of food. After a number of trials, a fasting S brought to the CR chamber manifested either rhythmic motor activity of the stomach of high amplitude and low frequency (hunger contractions) or increased tonus with small rapid waves. The food intake procedure produced relaxation of the stomach and disappearance of the rhythmic activity. After eating, the rhythmic activity was absent for some time and then gradually emerged, resembling the activity in the prefeeding period. The only difference was that oscillations of very high amplitude and low frequency failed to occur. The tonus of the stomach rose after eating, either abruptly or gradually. During the operation of the CS in the 1st trial, the relaxation of the stomach

and the disappearance of high oscillations occurred. When the CS was not reinforced, the high oscillations returned immediately. In the following trials (after the S ate), stomach motor activity was variable. Results are discussed with reference to the interplay between the hunger drive reflexes and consummatory food reflexes.—*Journal summary*.

10447. Cole, Sherwood O. & Blaszczyk, Carolyn. (Rutgers State U.) **Adaptation to 23½-hour food deprivation under CRF conditions: A sex comparison.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 131-135.—6 male and 6 female albino rats were given 12 successive ½-hr adaptation sessions to 23½-hr cycles of food deprivation under conditions of continuous reinforcement. Using operant behavior as a measure of adaptation to such cyclic deprivation, the results yielded a significant trials effect ($p < .01$) and a significant Sex \times Trials interaction effect ($p < .05$). The significant Sex \times Trials interaction indicated a basic difference in the rate of adaptation by the males and females.—*Author abstract.*

Post Coll., Long Island U.) **Fear-reducing effect of graduated versus non-graduated forced exposure.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 907-910.—Contrary to a prediction from counterconditioning theory, forced, graduated exposure was less effective in reducing fear in 18 male Sprague-Dawley albino rats than forced, nongraduated exposure. This finding is interpreted to reflect a generalization decrement in the effect of graduated exposure resulting from exposure to conditions similar to, but not the same as, those present during the acquisition of fear. It is suggested that this decrement would be offset during free exposure where, in contrast to forced exposure, a graduated procedure would result in a greater amount of exposure.—*Journal abstract.*

Birmingham, England) **The use of the Kamin effect to distinguish between size and stability characteristics of long-term memory traces.** *Life Sciences*, 1970(Oct), Vol. 9(20, Pt. 2), 1175-1179.—The magnitude of a partly-learned avoidance response has been found to be a curvilinear function of the training-test interval (Kamin effect). To

examine the stability concept of the long-term memory trace extinction rate was examined in 48 male F₁ hybrid mice trained in a 1-trial passive avoidance learning situation. The extinction rates showed a linear trend with respect to training-test interval showing that the initial readiness of an animal to exhibit a learned response carries no necessary implications for the future course of extinction of that response. Trace stability, which depends upon the rate at which the learned response becomes extinguished, is regarded as being established during, or immediately after, learning acquisition and to be unaffected by those varying organismic circumstances surrounding response elicitation which are responsible for producing the Kamin effect.—*W. E. Wood.*

Discrimination

10463. Cogan, Dennis; Innam, Susan, & Gambrel,

Margaret. (Texas Technological Coll.) **Discrimination in parakeets (*Melospittacus undulatus*) as a function of age.** *Psychological Record*, 1971(Win), Vol. 21(1), 117-120.—Examined the use of parakeets as laboratory Ss, 4 1-2 mo. old and 4 9-12 mo. old parakeets (*Melospittacus undulatus*) were taught to discriminate between a circle and a triangle in a Y maze using a noncorrection procedure. Although no age differences were found, all Ss met the stringent criterion for learning 15 consecutive correct responses. It is concluded that the parakeet would make an interesting S for further study.—*Journal abstract.*

10464. Dobrzecka, Czeslawa & Konorski, J. (Nencki Inst. of Experimental Biology, Warsaw, Poland) **Qualitative versus directional cues in differential conditioning.** *Acta Biologiae Experimentalis*, 1968, Vol. 28(2), 61-69.—Trained 10 dogs to lift the right foreleg when 1 5-sec stimulus (S_R) was presented, and the left foreleg to the other (S_L). The correct response on a trial was reinforced immediately with food. A wrong response terminated the trial, and if no response occurred the correct one was passively generated and followed by food. Acquisition was slow or absent when S_R and S_L were in the same modality and presented from the same location, but rapid if the stimuli were separated spatially. Acquisition was also rapid for similarly located stimuli chosen from different modalities. These go right-go left discriminations—unlike go-no go discriminations, which were rapidly trained even with stimuli from the same modality located in the same place—were considered to be mediated by and so depend in difficulty on the discriminability of the orienting responses evoked by S_R and S_L.—*J. J. Bruno.*

10465. Elmsore, Timothy F. (Walter Reed Army Inst. of Research, Washington, D.C.) **Effects of response effort on discrimination performance.** *Psychological Record*, 1971(Win), Vol. 21(1), 17-24.—Conducted 2 experiments in which 6 White Carneaux pigeons performed on a discrete-trial successive discrimination procedure. On each trial the key was either red or white, the red being associated with a reinforcement probability of .25, and the white with .50. The effects of varying the effort required to complete a trial while keeping the effort requirements the same in the presence of both key colors were investigated. In Exp. I, effort was varied by changing the force required to operate the key. In Exp. II, effort was varied by changing the number of responses required to complete a trial. When the effort requirement was low, there was little or no difference in behavior in the presence of the 2 key colors. As the effort requirement was increased, the latency of response to the red key increased, and the probability of responding to the red key decreased. Little change was seen in behavior in the presence of the white key. The effects of manipulating the number of responses required to complete a trial were more consistent than those of manipulating the key force requirement.—*Journal abstract.*

10466. Lawicka, Wacława. (Nencki Inst. of Experimental Biology, Warsaw, Poland) **Differing effectiveness of auditory quality and location cues in two forms of differentiation learning.** *Acta Biologiae Experimentalis*, 1969, Vol. 29(1), 83-92.—Trained 2 groups of naive dogs, 1 with tone frequency cues (frequency group) and the other with auditory location cues (location group) on a task with 2 instrumental responses (go left-go right), both reinforced by food. It

was found that the acquisition of the location group was much superior to the frequency group. 2 other groups of dogs with the same cues were tested on the acquisition of a Pavlovian differentiation task (go-no go) in which only 1 stimulus was reinforced by food. In contrast to results of the previous task, the acquisition rate of the frequency group was significantly higher than that of the location group. Results are interpreted in terms of differential effectiveness of cues, indicating that auditory localization cues may become easily associated with motor acts, whereas tone frequency cues are easily associated with respective drives. (17 ref.)—*Journal summary*.

10472. Wolfe, Marshall; Ulrich, Roger, & Dulaney, Sylvia. (Western Michigan U.) **Fighting and escape reaction in paired rats.** *Psychological Record*, 1971(Win), Vol. 21(1), 59-68.—Presented an electric foot-shock to 4 pairs of male Long-Evans hooded rats confined in a start box. At the termination of the 100th shock, 1 side of the start box was removed and a runway exposed to a safe-plate. All members of 2 pairs, 1 member of a 3rd pair, and neither member of the 4th pair received individual escape training prior to pairing. Pairing of Ss receiving individual escape training had temporary disrupting effects on the efficiency of escape responding. When the safe-plate was also electrified, escape latencies increased. Fight probabilities were highest while paired Ss were confined in the start box, lower when Ss were allowed more floor area but prevented an effective means of terminating shock, and lowest when Ss were allowed an effective means of escape. It is concluded that the instrumental running

response did affect the interaction between aggression and escape, and that employing a more naturalistic response as a whole proved more successful in disrupting aggression in favor of escape.—*Journal abstract*.

Reinforcement

10475. Filion, Ross D., Fowler, Stephen C., & Notterman, J. M. (U. Pennsylvania, Medical School) **Prefeeding, discontinuance of prefeeding, and force-proportional reinforcement.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 145-147.—Using an isometric lever, 3 groups of rats obtained reinforcement (45-mg pellets) in proportion to how hard they pressed, as well as by conventional increases in response rate. They were prefed 0, 3, and 9 gm. of lab chow, respectively, during original conditioning. Reliable intergroup differences in reinforcement rate were observed during the initial but not the final sessions of acquisition. Upon discontinuance of prefeeding, the 9-gm group showed a significant increase in reinforcement rate, the augmentation being statistically attributable to higher rate (and not force) of response. Previous reports indicate that increases in force (rather than rate) accompany greater hours of food deprivation.—*Author abstract*.

Reinforcement Schedule

10479. Brooks, Charles I. (Wilson Coll.) **Frustration considerations of the small-trials partial reinforcement effect: Experience with nonreward and inter-trial reinforcement.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 362-371.—Conducted 3 continuous and partial reinforcement experiments with 60 female, 40 male, and 120 male hooded rats. In Exp. I, continuously reinforced Ss jumped a hurdle to escape nonreward faster than partially reinforced Ss, even under equal reward conditions. The small-trials partial reinforcement effect was obtained in a runway under conditions of equal reward experience in Exp. II. In Exp.

III, Ss received either hurdle jumping or runway extinction following a small number of continuous, partial, or partial reinforcement trials with intertrial reinforcements (ITRs) given after rewarded or non-rewarded trials. Although runway performance differences were obtained during extinction for the ITR groups, no hurdle-jumping differences were found. It is concluded that whereas a primary frustration analysis can explain the usual small-trials partial reinforcement effect, a sequential hypothesis seems more appropriate for explaining the effect of ITRs. (16 ref.)—*Journal abstract*.

10485. Soltysik, Stefan & Gasanova, Rima. (Nencki Inst. of Experimental Biology, Warsaw, Poland) **The effect of "partial reinforcement" on classical and instrumental conditioned reflexes acquired under continuous reinforcement.** *Acta Biologica Experimentalis*, 1969, Vol. 29(1), 29-49.—Studied the effect of 67 and 50% fixed ratio quasi-random partial reinforcement upon classical salivary and instrumental motor CRs in 6 dogs after overtraining under CRF. The instrumental CR was a chained response of 14 bar presses to a metronome (instrumental CS) followed by a buzzer (salivary CS) and food, so that the instrumental and salivary CRs were elicited by 2 different CSs and could be studied simultaneously. PRE was observed on the rate of conditioned salivation, latency of the 1st bar press, and vigor of the instrumental CR. PRE caused a deterioration of salivary and instrumental CRs, but there was some evidence of an increase of a drive CR, masked by the decrease of incentive motivation. The immediate effect of nonreinforcement consisted in a diminution of salivary CRs, considered as a partial extinction of the consummatory CR, and a simultaneous increase of instrumental CRs, explained by the release of the drive center from inhibitory influence of the consummatory center. Thus the "frustration effect" was explained in terms of changing proportions of consummatory and drive CRs, due to the partial extinction of the former and

a release of the latter CR in conditions of an intermittent reinforcement. (45 ref.) *Journal summary*.

(Drew U.) **Shock-right facilitation: Correction training with differential S^o availability during an enforced delay following an error.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 329-334. Examined delay-of-reinforcement factors controlling error tendencies in retraces-correction training. Following an error, 70 shock-right and no-shock male Sprague-Dawley albino rats were subjected to different choice-point delays during which the visual discriminative stimuli (S^o) was either present or absent. Longer choice-point delays progressively reduced both errors and trials to criterion, as well as the magnitude of the shock-right facilitation effect. Presence or absence of the S^o interacted with length of the delay interval: at a 7.5-sec delay, the performance of Ss for which the S^o was present was facilitated over that of Ss for which it was absent, whereas the reverse held true at a 15-sec delay. Results delineate the role of both primary and secondary reinforcement in (a) controlling the rate of error reduction in correction training, and (b) providing a basis by which shock-right training can facilitate performance in an easy discrimination task.—*Journal abstract*.

10490. Fox, Paul A. (Southern Illinois U.) **The role of reward- and nonreward-produced stimuli on performance to patterned reinforcement.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6286.

10491. Galbraith, Karen. (Lakeshore Psychiatric Hosp., Toronto, Ontario, Canada) **Differential extinction performance to two stimuli following within-subject acquisition.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 343-350.—Examined the finding that within-S acquisition situations typically result in the generalized partial reinforcement effect. In an experiment with 80 male Wistar albino rats, this generalization was disrupted with a method derived from frustration theory. The usual within-S situation (continuous reinforcement to 1 stimulus and partial to a 2nd) involves only 1 response (approach) to anticipatory frustration (S_r). Following a within-S acquisition phase which involved conditioning 2 incompatible responses to S_r—approach when S_r accompanied 1 stimulus and avoidance when it accompanied a 2nd—differential extinction rates to the 2 stimuli were obtained. The same effect was observed when extinction was to the negative discriminandum in a discrimination. A number of differences between simple and discriminative extinction following identical pretraining were noted, raising

questions for conditioning-extinction models of discrimination. (16 ref.)—*Journal abstract.*

10492. McCloskey, J. L. & Tombaugh, Tom N. (Carleton U., Ottawa, Ontario, Canada) **The effects of volume of sucrose reward on resistance to extinction.** *Psychological Record*, 1971(Win), Vol. 21(1), 53-57.—Studied the effects of .01, .4, and .7 ml. of 32% sucrose on the acquisition and extinction performance of 24 female Sprague-Dawley albino rats in a discrete-trial barpress situation. In acquisition the performance of the .01 group was initially inferior to the other 2 groups, but there were no differences among groups at the end of training. In extinction the .01 group was the least resistant to extinction, with a tendency for the .7 group to extinguish faster than the .4 group. Results are discussed in relation to findings reported by other experiments.—*Journal abstract.*

10493. Tellish, Joseph A. & Dunstone, John J. (U. Maine) **Punishment of variable ratio maintained behavior.** *Psychological Record*, 1971(Win), Vol. 21(1), 49-52.—Examined the effect of continuous punishment of behavior maintained by a variable ratio schedule on the operant responding of 2 male Sprague-Dawley albino rats. Punishment resulted in disruption of responding confined primarily to the early portions of a session. Recovery of responding was noted during a daily session and over the punishment sessions. Punishment was effective in that final over-all rates were below those of the prepunishment rates.—*Journal abstract.*

New York) **Habituation and covariation of the components of the threat display in *Betta splendens*.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 827-837.—Repeatedly elicited the threat display of 6 male Siamese fighting fish, *Betta splendens*, during daily sessions over a 10-day period, using a mirror, a live *Betta*, and a picture of a *Betta* as stimuli. Between-day analysis of the rate of elicitation of component responses of the display shows that (a) for those records in which any decline in response frequency was evident, only the gill-cover extension and undulation responses showed marked and consistent habituation

trends; (b) gill-cover extension and undulation response rates covaried closely but were not consistently related to other response component rates; and (c) differential effectiveness of the 3 stimuli was reflected in the rates of several response components.—*Journal abstract.*

SENSORY PROCESSES

10500. Berman, Doreen; Karalitzky, A. R., & Berman, A. J. (Jewish Hosp. & Medical Center of Brooklyn, Neurosurgical Research Unit, N.Y.) **Auditory thresholds in monkeys asphyxiated at birth.** *Experimental Neurology*, 1971(Apr), Vol. 31(1), 140-149.—Determined the thresholds to pure-tone stimuli in 8 normal monkeys and 6 monkeys that had been asphyxiated at the time of birth. All Ss were trained and tested in a 2-way avoidance paradigm. Asphyxiated Ss had elevated thresholds at each of the frequencies tested: .5, 1, 2, 4, and 8 kHz. (34 ref.)—*Journal abstract.*

10502. Meyer, Merle E. & Collins, Michael D. (Western Washington State Coll.) **Light deprivation and sensory reinforced behavior in chicks.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 602.—Investigated the function of hr. of light deprivation with light onset as a sensory reinforcing stimulus by using 120 White Leghorn Cockerel chicks as Ss and the disruption of a photoelectric beam as an operant. Analysis of variance for the response data yielded a significant deprivation effect. Findings are supportive of previous data for more visually oriented organisms, suggesting that light onset as a sensory reinforcer will vary under the antecedent operation of light deprivation.—*P. Hertzberg.*

10503. O'Connell, R. (San Fernando Valley State Coll.) **Spontaneous alternation of brightness?** *Psychonomic Science*, 1971(Mar), Vol. 22(5), 273-274.—Attempts to dispel misunderstanding regarding a study by R. H. O'Connell (see PA, Vol. 39:1108) which found spontaneous alternation to be affected by stimulus change but not by any tendency to alternate brightness. It is urged that the distinction between response to change and the alternation of brightness not be lost. Positive evidence for the alternation of brightness is presented. (18 ref.)—*Journal abstract.*

10505. Price, Richard G. **Cochlear microphonic sensitivity in the rat as a function of age: Preliminary report.** U.S. Army Human Engineering Laboratories Technical Note, 1970(Jul), No. 8-70, 7 p.—Evaluated the suitability of the rat species for studying the effect of aging on the ear. Cochlear microphonic (CM) sensitivity was measured at frequencies from .1-20 kHz. in 27 1-, 13-, and 18-mo-old male albino Wistar rats. The 2 youngest groups had equally sensitive ears, but the ears of the oldest group showed large losses in CM sensitivity at all frequencies. The middle ear proved to be highly susceptible to infection. It is concluded that if the rat ear is to be used to study the effect of aging, special measures will have to be taken with respect to the problem of middle-ear infection.—*Journal abstract.*

Hearing and communication in birds: Species *Agapornis roseicollis*. *Acta Oto-Laryngologica*, 1971(Feb), Vol. 71(2-3), 194-196.—Reports the investigation of the communication process of 2 pairs of birds belonging to species *Agapornis roseicollis*. The method involved (a) correlating the melody patterns with other behavior of the birds, and (b) studying responses of the birds' cries previously registered or synthetically formed. Results suggest that there is a system of communication based upon the movement of the fundamental frequency, i.e., the pitch patterns. (French & German summaries) —*Journal abstract*.

10507. Todd, John H. **The chemical languages of fishes.** *Scientific American*, 1971(May), Vol. 224(5), 98-108.—The bullhead catfish has a remarkable sense of smell that is used for social purposes. Chemical signals, detected by the organs of smell, enable identification of the species, status, sex, and additional characteristics of other fish. The formation and maintenance of stable communities depends entirely on the members' sense of smell. Research dealing with chemical regulation of social behavior is described.—*P. Tolin*.

10510. Gollin, Eugene S. (U. Colorado) **An organism oriented concept of development.** *Merrill-Palmer Quarterly*, 1970(Jul), Vol. 16(3), 246-252.—Comparative-developmental analysis assumes that behavior is a function of organism and environment and therefore seeks to observe behavior in many organism-environment contexts. While there is some indication of dissatisfaction with traditional behaviorism and some attempt to reenergize phenomenology, the most important feature is a relaxation of doctrinaire attitudes and a recognition of the worthiness of inquiry research. The main psychological polarity today is not that of behaviorist and nonbehaviorist. The central issue is: Are there substantive factors in addition to the parameters traditionally dealt with by learning theories, which require inclusion for an understanding of the behavior of organisms, e.g., genetic factors which restrict or expand behavior modifiability; cognitive structures which impose differential qualitative or quantitative character upon incoming stimulation? There is room for techniques, methods, comparisons, and formulations in addition to those proposed by so-called experimental analysts. The kind of experiment performed will determine to a great extent the nature of the data picture available; and unless appropriate experiments are performed, all organisms may appear to behave alike. There is no rational basis for rejecting methods which have traditionally been used by experimental psychologists.—*R. V. Hamilton*.

pattern recognition, and mandibular kinesthesia. *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6974-6975.

10512. Sutton-Smith, Brian. (Teachers Coll., Columbia U.) **Developmental laws and the experimentalist's ontology.** *Merrill-Palmer Quarterly*, 1970(Jul), Vol. 16(3), 253-259.—The assertion that the concept of development can be dealt with within the framework of the learning technology implies that programmed learning pretty much sums up the story of human development. 2 conditions must hold if this assertion is true: (a) it must be demonstrated that learning technology alone can accomplish all kinds of developmental change, and (b) the natural world must be perceived as a vast programmed learning situation—even if an inferior one. Developmental psychology is concerned with both noncausal developmental laws, and with the causal phenomena which underlie the points along these sequences. The empiricism of the new learning-based developmental psychology actually involves a number of presuppositions with respect to developmental sequences and values, causal laws, and an experimental ontology. It is incumbent upon a scientist to make as explicit as possible the presuppositions of the language community of which he is a member. To make these presuppositions explicit is, of course, to set limits on one's truth claims and to be forced to justify oneself on grounds other than those arising from one's immediate technology. The generations of earlier developmental psychologists who made the first, if primitive, maps of developmental sequences were not devoting themselves to useless activities, even if the maps were not as detailed and representative as we would now wish them to be.—*R. V. Hamilton*.

INFANCY

10513. Ashton, Roderick & Connolly, Kevin. (U. Lagos, Psychology Div., Nigeria) **The relation of respiration rate and heart rate to sleep states in the human newborn.** *Developmental Medicine & Child Neurology*, 1971(Apr), Vol. 13(2), 180-187.—Monitoring respiration and heart rates in 22 unstimulated newborn infants right after feeding, during 3 complete sleep cycles, a significant change was found in respiration rate in successive epochs of States 1 (NREM) and 2 (REM), and a systematic heart rate change in State 1.—*P. W. Pruyser*.

10516. Caldwell, Bettye M. (Center for Early Development & Education, Little Rock, Ark.) **The effects of psychosocial deprivation on human development in infancy.** *Merrill-Palmer Quarterly*, 1970(Jul), Vol. 16(3),

260-277.—The natural logic inherent in the concept of deprivation, i.e., that an insufficiency of a particular substance or experience would lead to untoward developmental consequences, has stimulated a vast amount of fruitful research. Early studies tended to stress the effects of malnutrition on stature or brain weight—with research into its effects on mental development very current and that concerned with socioemotional development more contemplated than consummated. Research with the infant is extremely difficult to conduct, not only because of the tangles inherent in the deprivation concept but also because of a shortage of assessment techniques suited to the young child and of qualified persons to apply them. Nor has there ever been a readily available series of large numbers of potential research Ss—at least not readily available to persons interested in this area. Some of the early leads regarding psychosocial deprivation during infancy came from field studies concerned with effects of different child-rearing practices, with information occasionally offering misleads rather than heuristic clues. With human Ss, the author could not point to a truly experimental study involving deprivation. Areas of needed research are: (a) improved techniques of assessing the psychosocial environment, (b) change-sensitive measures of early child development, (c) exploring the relationship between constitutional factors and the susceptibility to the influence of deprivation, and (d) research utilization of the clinical single-case model. (University Hosp. of the West Indies, Kingston,
Jamaica) **Gross motor development in Jamaican
infants.** *Developmental Medicine & Child Neurology*,
1971(Feb), Vol. 13(1), 79-87.—300 Jamaican infants,
predominantly Negro, were checked during the 1st yr. of
life against Gesell norms, and found to be accelerated in
various gross motor and language items. Some of low
birth weight were significantly slower than the rest, but
equal to the normal white children of Gesell's schedules.
No sex or class differences were found for age of
walking.—P. W. Pruyser.

10520. **Hoversten, Gloria H. & Moncur, John P.** (U. California, Los Angeles) **Stimuli and intensity factors in testing infants.** *Journal of Speech & Hearing Research*, 1969(Dec), Vol. 12(4), 687-702.—Randomly administered sound stimuli at each of 4 hearing levels to 21 3-mo-old and 22 8-mo-old infants. Pulsed white noise, pulsed 500-Hz, pulsed 4000-Hz, pulsed voice, and music stimuli were presented in a sound-field through equidistant loudspeakers via tape. Behavioral changes were recorded by 2 Os. As predicted, percentage of response

increased with increased hearing level. In order to reach the 50% point of response, hearing levels varying from 23 db. (voice stimulus) to 72 db. (4000-Hz stimulus) above normal adult threshold were necessary. Voice generally resulted in the largest percentage of responses for both age groups at each hearing level. The 3-mo-old infants generally gave fewer responses than the 8-mo-old infants at comparable hearing levels. (16 ref.)—*Journal abstract.*

at comparable hearing levels. (16 ref.)—*Journal of Child Psychology and Psychiatry*, 1972, 13(2), 105-121. Krulišová, H. (Inst. for Care of Mother & Child, Prague, Czechoslovakia) **Heart rate changes during conditioning in the human infant.** *Activitas Nervosa Superior*, 1970(May), Vol. 12(2), 135.—In 5 infants heart rate was analyzed during the initial and final phase of conditioning and conditional differentiation. Head turning towards the source of milk was the response to be conditioned and the sound of a bell and/or buzzer were used as conditional signals. Ss were 17 days old at the beginning of the conditioning and 3 mo. old at the beginning of the differentiation. 10 trials in 1 daily session were performed accompanied by the following measurements: heart rate, head and body movement, and respiration. In both phases of conditioning and conditional differentiation there was heart rate acceleration during CS application (with the exception of the terminal phase of differentiation). Marked differences were found among individual infants; there was, however, no significant difference between heart acceleration and head turning or heart acceleration and body movement.—H. Bruml.

CHILDHOOD

10522. Baer, Donald M. (U. Kansas) **An age-irrelevant concept of development.** *Merrill-Palmer Quarterly*, 1970(Jul), Vol. 16(3), 238-245.—1 meaning of developmental psychology may be "child psychology": the behavioral characteristics of children, the processes responsible for these characteristics, and their future consequences; however, most psychologists characterized themselves and their journals by the processes they study, rather than their usual experimental subject. The equation of developmental psychology with child psychology has other problems: the most striking of these is the heterogeneity of children such that a study of infants differs from a study of 10 yr. olds. Consequently, a new psychology emerges: "age psychology" replaces, or subsumes, child psychology. The research design of the age psychologist consequently has a single distinctive feature: the age of his Ss is an organizing variable in his studies. It is the process of development, not merely the outcome of development, which should be the subject matter for child psychologists. The age-irrelevant concept of development hence is simply a sequence-relevant, or sequence-dependent, concept of learning. Learning technology is comprehensive, powerful, flexible, and readily amenable to experimental study and to practical application. Consequently, it seems thoroughly reasonable to build a concept of development squarely upon that technology.—R. V. Hamilton.

10523. Bail, Frederick T. (Cornell U.) The relative dominance of ikonic and symbolic categorization in the first, third, and fifth grades. *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6392. See also 10524, 10525, 10526, 10527, 10528, 10529, 10530, 10531, 10532, 10533, 10534, 10535, 10536, 10537, 10538, 10539, 10540, 10541, 10542, 10543, 10544, 10545, 10546, 10547, 10548, 10549, 10550, 10551, 10552, 10553, 10554, 10555, 10556, 10557, 10558, 10559, 10560, 10561, 10562, 10563, 10564, 10565, 10566, 10567, 10568, 10569, 10570, 10571, 10572, 10573, 10574, 10575, 10576, 10577, 10578, 10579, 10580, 10581, 10582, 10583, 10584, 10585, 10586, 10587, 10588, 10589, 10590, 10591, 10592, 10593, 10594, 10595, 10596, 10597, 10598, 10599, 10600, 10601, 10602, 10603, 10604, 10605, 10606, 10607, 10608, 10609, 10610, 10611, 10612, 10613, 10614, 10615, 10616, 10617, 10618, 10619, 10620, 10621, 10622, 10623, 10624, 10625, 10626, 10627, 10628, 10629, 10630, 10631, 10632, 10633, 10634, 10635, 10636, 10637, 10638, 10639, 10640, 10641, 10642, 10643, 10644, 10645, 10646, 10647, 10648, 10649, 10650, 10651, 10652, 10653, 10654, 10655, 10656, 10657, 10658, 10659, 10660, 10661, 10662, 10663, 10664, 10665, 10666, 10667, 10668, 10669, 10670, 10671, 10672, 10673, 10674, 10675, 10676, 10677, 10678, 10679, 10680, 10681, 10682, 10683, 10684, 10685, 10686, 10687, 10688, 10689, 10690, 10691, 10692, 10693, 10694, 10695, 10696, 10697, 10698, 10699, 10700, 10701, 10702, 10703, 10704, 10705, 10706, 10707, 10708, 10709, 10710, 10711, 10712, 10713, 10714, 10715, 10716, 10717, 10718, 10719, 10720, 10721, 10722, 10723, 10724, 10725, 10726, 10727, 10728, 10729, 10730, 10731, 10732, 10733, 10734, 10735, 10736, 10737, 10738, 10739, 10740, 10741, 10742, 10743, 10744, 10745, 10746, 10747, 10748, 10749, 10750, 10751, 10752, 10753, 10754, 10755, 10756, 10757, 10758, 10759, 10760, 10761, 10762, 10763, 10764, 10765, 10766, 10767, 10768, 10769, 10770, 10771, 10772, 10773, 10774, 10775, 10776, 10777, 10778, 10779, 10780, 10781, 10782, 10783, 10784, 10785, 10786, 10787, 10788, 10789, 10790, 10791, 10792, 10793, 10794, 10795, 10796, 10797, 10798, 10799, 10800, 10801, 10802, 10803, 10804, 10805, 10806, 10807, 10808, 10809, 10810, 10811, 10812, 10813, 10814, 10815, 10816, 10817, 10818, 10819, 10820, 10821, 10822, 10823, 10824, 10825, 10826, 10827, 10828, 10829, 10830, 10831, 10832, 10833, 10834, 10835, 10836, 10837, 10838, 10839, 10840, 10841, 10842, 10843, 10844, 10845, 10846, 10847, 10848, 10849, 10850, 10851, 10852, 10853, 10854, 10855, 10856, 10857, 10858, 10859, 10860, 10861, 10862, 10863, 10864, 10865, 10866, 10867, 10868, 10869, 10870, 10871, 10872, 10873, 10874, 10875, 10876, 10877, 10878, 10879, 10880, 10881, 10882, 10883, 10884, 10885, 10886, 10887, 10888, 10889, 10890, 10891, 10892, 10893, 10894, 10895, 10896, 10897, 10898, 10899, 10900, 10901, 10902, 10903, 10904, 10905, 10906, 10907, 10908, 10909, 10910, 10911, 10912, 10913, 10914, 10915, 10916, 10917, 10918, 10919, 10920, 10921, 10922, 10923, 10924, 10925, 10926, 10927, 10928, 10929, 10930, 10931, 10932, 10933, 10934, 10935, 10936, 10937, 10938, 10939, 10940, 10941, 10942, 10943, 10944, 10945, 10946, 10947, 10948, 10949, 10950, 10951, 10952, 10953, 10954, 10955, 10956, 10957, 10958, 10959, 10960, 10961, 10962, 10963, 10964, 10965, 10966, 10967, 10968, 10969, 10970, 10971, 10972, 10973, 10974, 10975, 10976, 10977, 10978, 10979, 10980, 10981, 10982, 10983, 10984, 10985, 10986, 10987, 10988, 10989, 10990, 10991, 10992, 10993, 10994, 10995, 10996, 10997, 10998, 10999, 11000, 11001, 11002, 11003, 11004, 11005, 11006, 11007, 11008, 11009, 11010, 11011, 11012, 11013, 11014, 11015, 11016, 11017, 11018, 11019, 11020, 11021, 11022, 11023, 11024, 11025, 11026, 11027, 11028, 11029, 11030, 11031, 11032, 11033, 11034, 11035, 11036, 11037, 11038, 11039, 11040, 11041, 11042, 11043, 11044, 11045, 11046, 11047, 11048, 11049, 11050, 11051, 11052, 11053, 11054, 11055, 11056, 11057, 11058, 11059, 11060, 11061, 11062, 11063, 11064, 11065, 11066, 11067, 11068, 11069, 11070, 11071, 11072, 11073, 11074, 11075, 11076, 11077, 11078, 11079, 11080, 11081, 11082, 11083, 11084, 11085, 11086, 11087, 11088, 11089, 11090, 11091, 11092, 11093, 11094, 11095, 11096, 11097, 11

10524. Beck, Helen L., et al. *American Journal of Orthopsychiatry*, 1971(Jun), Vol. 31(12-A), 6392. — Presents digests of 12 of the papers presented at the 48th annual

meeting of the American Orthopsychiatric Association in 1971. Topics covered include early childhood education; cognitive development after age 5; national advocacy system for children; reading failures and a classroom approach to dyslexia; test behavior of disadvantaged children; and continuity of short-term residential care.

10525. Fowler, W. & Leithwood, K. A. (Ontario Inst. for Studies in Education, Toronto, Canada) **Cognition and movement: Theoretical, pedagogical and measurement considerations.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 523-532.—The paucity of recent development research concerned with complex gross motor learning, particularly in the young child, can be partly attributed to lack of conceptual constructs and accompanying analytic-evaluative instruments. Such learning requires forms of cognitive mediation apparently fostered by analytic-integrative modes of teaching and learning. A theoretically based, empirically tested scheme for assessing the hierarchical complexity of gross motor tasks and sequences is elaborated in terms of both requisite cognitive involvement (structural organization) and underlying physical abilities (structural dynamics). The scheme is presented as 1 possible solution to the problem of quantifying task complexity and levels of skill to facilitate research and development in developmental psychology and education. (25 ref.)—*Journal abstract*.

10527. O'Reilly, Alora. (Los Angeles City Schools, Calif.) **Racial attitudes of Negro preschoolers.** *California Journal of Educational Research*, 1971(May), Vol. 22(3), 126-130.—Results indicate that while Negro preschoolers are certainly aware of sex roles and have a slight tendency to rate the Negro negatively, they are not as aware of racial differences as the children in a previous study. There was an equal association of positive with the Negro and Caucasian figures. There was more association of negative identification with the Negro, which may be the result of cultural influences. However, the difference was not great, which may be associated with the black movement trying to provide a positive identity for Negroes.—*Journal summary*.

10528. Preuett, James W. (Oklahoma State U.) **An exploratory investigation of the effect of imposing a heartbeat sound on kindergarten and first grade students.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6955.

10529. Rosenbloom, L. & Horton, M. E. (U. London, England) **The maturation of fine prehension in young children.** *Developmental Medicine & Child Neurology*, 1971(Feb), Vol. 13(1), 3-8.—The dynamic tripod is a finger posture of thumb, index, and middle fingers allowing a precision grip, as in holding a crayon. The development of this grip was studied in 60 boys and 68 girls ranging from 1.6-7 yr. old, all normal. It culminates a sequence, starting with a supinate grip, which is quickly superseded by a pronate grip.—P. W. Pruyser.

10530. Stine, Oscar C., Saratsiotis, John B., & Furno, Orlando F. (U. Maryland, Baltimore) **Children in the extremes of physical and psychological measurements.** *Journal of School Health*, 1969(Nov), Vol. 39(9), 636-641.—A study of the children in the extremes of 10 measurements made from 776 children confirmed previously identified correlations between height, weight,

and head circumference. Verbal maturity was correlated with height in the upper end of the distribution but not in the lower end. This is consistent with a group of verbally immature children whose problems are not related to their general growth.—*Journal summary*.

10531. Theron, Alexander. (Temple U.) **Children and adolescents: A bio-cultural approach to psychological development.** New York, N.Y.: Atherton Press, 1969. xvi, 365 p.—Based on the principle that "an individual's understanding of himself must begin with an understanding of his origin," and that "all human behavior is determined by both biological characteristics and the environmental characteristics of the culture into which an individual is born," the content and arrangement of the chapters have been planned to demonstrate this viewpoint.—A. M. Cawley.

10532. Vitová, Z. & Hrbek, A. (Charles U., Research Inst. for Child Development, Prague, Czechoslovakia) **Cerebral responses to repetitive photic stimulation during waking and sleep in children.** *Acta Nervosa Superior*, 1970(Nov), Vol. 12(4), 295-303. Studied photic "driving" during the waking state, drowsiness, and slow wave sleep in 144 infants (during their 1st 2 yr. of age) and 20 6-14 yr. old Ss. "Driving" was significantly less pronounced during sleep than in wakefulness in all age groups, except in the newborn period. The highest "driving" frequency and the percent time of "driving" declined in sleep; the amplitude of the "driven" rhythm and the optimal "driving" frequency were lower. Persistence of background EEG activity during stimulation and its mixture with "driving" was very prominent in sleep in comparison with the waking states. Occlusion, variation in excitability of different brain structures, or modification of afferent transmission may be possible factors underlying these changes. (Russian & Czech summaries) (25 ref.)—*Journal abstract*.

10533. Wyon, D. P. (Swedish National Inst. for Building Research, Lund) **Studies of children under imposed noise and heat stress.** *Ergonomics*, 1970(Sep), Vol. 13(5), 598-612.—Assesses moderate stress research as a field of study in which principles governing the choice of criteria of stress and strain are reviewed. Important parameters of moderate stress research are identified and placed in the context of an empirical scheme, with reference to which their interpretation and relevance are discussed. Studies by the author of 11-, 13-, and 17-yr-old children under imposed heat stress are used to illustrate the scheme and are interpreted in terms of arousal and effort. An approach to the study of noise in the moderate stress region is suggested, in which measures based on sound pressure level are unlikely to have much relevance. This view is supported by preliminary results from a study of 110 12 yr. olds under intermittent low-level noise. (French & German summaries) (29 ref.)—*Journal abstract*.

10536. Fraisse, Paul. (U. Paris-Sorbonne, Lab. of

Experimental & Comparative Psychology. France) **La verbalisation d'un dessin facilite-t-elle son évocation par l'enfant?** [Does verbalization of the design facilitate its recall by the child?] *Année Psychologique*, 1970, Vol. 70(1), 109-122. In a free-recall task, 8-yr-old Ss remembered more drawings than verbal stimuli after 1 presentation. The effect decreased when the number of presentations increased. Further, verbalization of the content of the drawings when these were presented facilitated retention only when the drawing and its verbal description were complex. Since the verbal response was the same for both drawings and verbal stimuli, these findings indicate that the nature of the stimulus plays a greater role in retention than the response. This is interpreted on the basis of the greater short-term associative power that concrete stimuli have over verbal stimuli (19 ref.) *G. Rubin-Rabson*.

10542. Murphy, Lois B., et al. (Menninger Foundation, Topeka, Kan.) **Children under three: Finding ways to stimulate development.** *Children*, 1969(Mar), Vol. 16(2), 46-62.—Discusses learning problems and the children's lack of interest in learning, resulting from the country's neglect of human needs. Problems with institutional care of children and fads in such care are noted. Criteria for use in evaluating proposals for early child care programs are suggested: adequate nutrition, handling of illness, stimulation, talking to baby, sensorimotor exercise, encouragement of skill mastery, and continuity in warm relationships. Interrelationships among these factors are discussed. Mentioned are several factors which may be instrumental in explaining the lack of curiosity and of development of creativity in underprivileged children and of the preschool activities which may aid in this development. Presented are 5 longitudinal research programs designed to provide cognitive and other stimulation to young children, some of the experiments training parents to be stimulators, and all of the research concerned with optimal environments for

adequate development. (20 ref.)—*D. T. Lekarczyk*.
10543. Nazzaro, Jean N., Rodrigues, Rachel, & Nazzaro, James R. (Chico Unified School District, Calif.) **Configuration variables in visual discrimination learning.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 45-50.—Configuration variables were examined in a 2-choice color discrimination study with 96 3rd and 4th graders. Stimuli consisted of 4 pairs of patterns varying in area, location, and contour. Fewest errors occurred when the pattern had closed contours, stimulus-response (S-R) contiguity, and a large area. Acquisition was poorest when pattern lacked both closure and S-R contiguity. The results suggest that a pattern attribute ought not to be considered as an isolated variable but should be examined in its relation to the other attributes of that pattern.—*Journal summary*.

10544. Roodin, Paul A. (Purdue U.) **Effect of relevant and irrelevant verbalization on intra-dimensional and extra-dimensional responding in kindergarten children.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6300-6301.

10545. Shepp, Bryan E. & Gray, Vicky A. (Brown U.) **Some effects of variable-within and variable-between irrelevant stimuli on dimensional learning, and transfer.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 32-39.—Trained 224 kindergartners on a simultaneous discrimination with 1 visual dimension relevant and a 2nd irrelevant. The irrelevant dimension was varied either between or within trials. On the original problem, Ss were given either special training (which instructed them in the mode of solution) prior to conventional discrimination training or only discrimination training. Following the acquisition of the 1st problem, Ss were trained on either an intradimensional (ID) or an extradimensional (ED) shift. In the shift task, the irrelevant dimension was also varied either between or within trials. Results show that special training facilitated learning, but had no unique effect on performance in transfer. ID shifts were learned faster than ED shifts when the irrelevant array in shift varied within trials, but no shift difference was observed with the shift array varied between trials. Results underscore several weaknesses of current 2-stage theories of discriminative learning.—*Journal abstract*.

10546. Smothergill, Daniel W. (Syracuse U.) **Effects of temporal relationship between stimuli on children's discrimination learning.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 511-515.—Previous research indicates that temporal relations between discriminanda affect the discrimination process in children. An experiment was conducted to test 2 hypotheses: (a) simultaneous presentation of stimuli for same-different judgments results in learning the features which differentiate the stimuli; and (b) successive presentation facilitates learning a schema of the standard stimulus. A transfer of training paradigm was used with 96 6- and 7-yr-old children. Evidence of feature differentiation and schema learning was found; but both kinds of learning occurred under each of the presentation conditions. Procedural differences between this and other studies are noted as possible reasons for the discrepancies in results.—*Journal abstract*.

10547. Staats, Arthur W., Brewer, Barbara A., & Gross, Michael C. (U. Hawaii, Honolulu) **Learning and cognitive development: Representative samples, cumulative-hierarchical learning, and experimental-longitudinal methods.** *Monographs of the Society for*

Research in Child Development, 1970(Nov), Vol. 35(8), 85 p.—Reports "some of the findings of the senior author's long-extended research project on the cognitive learning of children. Although the focus is upon the research findings, especially those of the latter stages of the project, several more general areas are discussed. Thus, although the research has been conducted for its significance to the development of basic learning theory, it also involves substantive and philosophical methodological innovations, concerns theories of cognitive development, and has implications for a general conception of child development through learning."—A. Barclay.

10548. Stevenson, Harold W., Williams, Anne M., & Coleman, Edgar. (U. Minnesota) **Interrelations among learning and performance tasks in disadvantaged children.** *Journal of Educational Psychology*, 1971(Jun), Vol. 62(3), 179-184.—Administered 8 learning and 8 performance tasks to 50 4-5 yr. olds attending day care centers. Results give little support to positions positing differences in the learning processes of middle- and lower-class children. The intercorrelations were very similar to those previously obtained with middle-class children. Significant correlations were found between (a) paired-associate learning, serial memory, category sorting, and observational learning; (b) serial memory and observational learning; and (c) category sorting, serial memory, and observational learning. The only performance task with a high frequency of significant correlations with the learning tasks was instructions. The frequency of significant correlations between instructions and the learning tasks was greater than that found among the learning tasks themselves.—*Journal abstract.*

10552. Upadhyay, Surendra N. (Ravishankar U., Raipur, India) **Effectiveness of the differential sets in learning double alternation spatial mazes.** *Indian Psychological Review*, 1969(Jul), Vol. 6(1), 26-28.—Investigated the effects of 2 differential instructions in learning the double-alternation paper-pencil mazes. Ss were 40 10-18 yr. old male school children. Equal number of Ss were assigned to positive and negative set and to RRL and LLRR sequences. Error scores were converted into Vincent scores at 25, 50, 75, and 100% levels of learning. Results using a 2-way analysis of variance showed the main and interaction effects to be significant. The positive set group showed superior learning to the negative group. With increase in trials there was a systematic progression of learning. Results suggest that not only does set play a deciding role in learning or problem-solving behavior, but differential effects of set were observed at various levels of performance.—K. C. Panda.

Abilities

10573. Cacciaguerra, F. & Morabito, F. (U. Milan, Italy) **Rapporti tra sviluppo somatico e sviluppo intellettuale.** [Relationships between physical and intellectual development.] *Acta Medica Auxologica*, 1969, Vol. 1(3), 223-255.—Reports a case-series with 6-15 yr. old boys with various growth changes. A transversal and a longitudinal study were performed. From the 1st study, which considered the intellectual development in 977 boys, it was found that hypoevolutions, hyposomias, and obesities were not associated with mental delay and, were not particularly related to the intellect. Only a moderate correlation between body and mind was observed. In the 2nd study, the intellectual development in 151 Ss showing hypoevolutions, hyposomia, and leanness, under anabolic drug therapy, was examined. This therapy caused remarkable improvement in Ss with hypoevolutions, especially in those younger than 10 yr. However, no direct relationship existed between the 2 improvements. (French & German summaries) (121 ref.)—*English summary*.

10575. Feldman, David H. & Markwalder, Winston. (U. Minnesota) **Systematic scoring of ranked distractors for the assessment of Piagetian reasoning levels.** *Educational & Psychological Measurement*, 1971(Sum), Vol. 31(2), 347-362. Attempted to determine if a map reading test could be used to assess both a child's map reading skill and his level of reasoning ability according to Piaget's theory of cognitive development. The latter would be assessed by the analysis of the child's choice of distractors. A new instrument for measuring spatial reasoning was designed and validated based on conceptual analysis of a geographic map. All 25 items were designed to induce responses indicative of the 4 reasoning levels suggested by Piaget. The sample included 270 5th, 7th, and 9th graders evenly distributed across 3 different ethnic groups (black, white, and Chinese). The results tend to indicate that the instrument devised may be capable of measuring reasoning stage levels as well as map achievement. Results also show that children of different ethnic backgrounds tend to go through the same set of developmental stages and that children of specific developmental levels tend to select distractor indications of that level.—R. W. Covert.

10576. Joesting, Joan & Joesting, Robert. (North Carolina State U.) **Correlation of scores on the Picture Interpretation Test and Stanford-Binet Form L-M IQs.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 906.—Administered the Picture Interpretation Test (PIT) and the Stanford-Binet (SB) Form L-M to 27 4-13 yr.

old children. A Pearson product moment correlation of .60 ($p = .01$) was obtained between the PIT and SB IQ. The SB MA and the PIT correlated .65 ($p = .01$). After experience of educational stimulation, Ss' PIT scores improved significantly over those of a control group. Data suggest that children's IQs may be increased by exposure to the educational stimulation of a preprimary curriculum.—*Author abstract.*

Johnstone Training & Research Center, Bordentown, N.J.) **Redundance in line drawings of familiar objects: Effects of age and intelligence.** *Cognitive Psychology*, 1971(Apr), Vol. 2(2), 196-205.—At optimum performance, line drawings of objects are approximately 50% redundant, as measured by the recognition levels maintained after varying percentages of lines have been deleted. Discriminative redundancy increases sharply up to age 8 yr., then gradually into adulthood, and is unaffected by mild mental retardation. It is inferred that, with increasing age, more aspects of familiar objects are converted into distinctive features. (31 ref.)—*Journal summary.*

10583. Tripathi, R. B. (Gorakhpur U., T. D. Coll., Jaunpur, India) **Predictive-validity of a non-verbal group test of general mental ability.** *Indian Psychological Review*, 1969(Jul), Vol. 6(1), 29-31.—The predictive validity of a nonverbal group test of general mental ability was determined by administering the test to a group of 50 5th and 50 8th graders and by relating the IQ scores to their final examination marks. The coefficients of correlation were .60 (5th graders) and .58 (8th graders). The forecasting efficiency coefficients were low in both cases.—*K. C. Panda.*

10584. Weiss, A. A. (Hebrew U., Jerusalem, Israel) **Directionality in four Bender-Gestalt figures: II.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 412-414.—In an extension of a previous study by A. A. Weiss

(see PA, Vol. 44:2347), the direction of execution of 4 Bender-Gestalt figures (1, 2, 3, 6) was investigated in 168 locally educated Israeli boys and 143 girls attending Grades 3, 5, and 7. There were 279 right-handers and 32 left-handers with basic right-left reading-writing habits. Dichotomization for at least 3 as against no more than 2 left-right executions showed a stronger tendency in right-handers ($p < .01$) for left-right execution. Combination of these data and earlier data from kindergarten, 1st, and 9th grade Ss showed a marked increase of left-right executions from 48% in kindergarten to 92% in Grade 9. A plateau of 80, 78, and 81%, respectively, was observed in Grades 3-7. This may reflect the clash between the basic left-right drawing tendency emerging with increasing maturation and the right-left reading-writing habits becoming more firmly established between ages 9 and 13. Studying children with left-right reading-writing habits might confirm or disprove this interpretation of the plateau.—*Journal abstract.*

Perception

10585. Alberman, Eva D., Butler, Neville R., & Sheridan, Mary D. (National Children's Bureau, London, England) **Visual acuity of a national sample (1958 cohort) at 7 years.** *Developmental Medicine & Child Neurology*, 1971(Feb), Vol. 13(1), 9-14.—Snellen tests on 14,197 children at age 7 showed 79% with 6/6 in both eyes; 96% with 6/9 or better in at least 1 eye. In children with glasses the proportion of those with 6/6 acuity was raised from 45-62% after correction.—*P. W. Pruyser.*

10586. Andersson, Alf L. & Ruuth, Egil. (Lund U., Sweden) **The relation between spiral aftereffect duration and Rod and Frame Test performance in early childhood.** *Psychological Research Bulletin, Lund U.*, 1971, Vol. 11(2), 14 p.—Assigned 21 female and 17 male 5-6 yr. olds to 1 of 3 groups on the basis of their spiral aftereffect durations. The group with an intermediate (initial) score was assumed to have reached a stage of relative autonomy from both extraceptive (nonself) and intraceptive (self) factors of perception. As predicted, this group was not as field dependent in the Rod and Frame Test as the other 2 groups, and did not score as extremely field independent.—*Journal abstract.*

10599. Cohen, Stewart. (U. Illinois) **Peers as mod-**

eling and normative influences in the development of aggression. *Psychological Reports*, 1971(Jun), Vol. 28(3), 995-998.—Examined the role functions of peers and adult socialization agents (mother, father, and teacher) on 2 dimensions of aggression-related experiences (modeling and norms). Ss were 108 male 4th and 6th graders. A standardized interview focusing on nonparticipatory observations of aggressive behavior and reinforcement-expectations for aggressive behavior served to provide response measures of differences among sources in providing experiences correlated with the acquisition and performance of aggressive behavior. Among sources surveyed, peer-related experiences were significantly more frequently representative of exposure to modeling and reinforcement contingencies associated with aggression, while reports of teacher behavior were least representative of these dimensions. *Journal abstract.*

10600. Corman, I. **Le thème du père nourricier dans le test projectif P.N. [The theme of the nurturing father in the Patte Noir projective test.]** *Revue de Psychologie Appliquée*, 1970, Vol. 20(4), 231-244. The Patte Noir test revealed transference of maternal roles to the father in 100 of 500 children sampled. 3 psychoanalytic hypotheses are advanced and discussed. Children seriously frustrated in their need for nourishment and love found the father a more gratifying substitute. Oedipal conflicts are further confounded in young males. The consequences of the manifest oral regression is evident in confusion of breasts and phallus, and frequent concomitance of anorexia and nocturnal enuresis. A. J. Hartman.

10601. Cummins, Shirley; Garms, Nancy, & Zusne, Leonard. (U. Tulsa) **Another note to Santa Claus.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 510.—In a replication of C. M. Solley and G. A. Haugh's study of size changes in drawings of Santa Claus in relation to the Christmas season, 222 5-9 yr. old children drew Santa Claus pictures on December 8, 16, and January 5. Statistical analysis shows only random changes in size of drawings and no age related differences.—*Author abstract.*

[Influence of the school group on the formation of self-consciousness.]** *Jednotná Škola*, 1971(Feb), Vol. 23(2), 145-162.—Defines self-consciousness as the image an individual has of his worth, ability, and importance in comparison with other people. Self-consciousness is considered to (a) play a central role in the formation of the individual's character, (b) be the product of the individual's contacts with his other social surroundings, and (c) have a comparatively constant character which enables the O to foresee fairly accurately the future conduct and behavior of the person observed. A study was conducted of the mutually appreciative attitudes of 254 pupils in the field of self-consciousness using a scale adapted from B. Dickey (see PA, Vol. 36:4JL16D). Ss having great and poor self-consciousness were distinguished by similarities between their self-appreciation and appreciation by their schoolmates. The influences on the formation of self-consciousness were

studied in the 2 groups with a specially arranged text. Conclusions are drawn and steps for reeducating pupils with an undesirable self-consciousness are outlined. (Russian summary)—*English summary*.

10607. Yarrow, Marian R., Campbell, John D., & Burton, Roger V. (National Inst. of Mental Health, Lab. of Socio-Environmental Studies, Bethesda, Md.) **Recollections of childhood: A study of the retrospective method.** *Monographs of the Society for Research in Child Development*, 1970(Aug), Vol. 35(5), 83 p.—Focuses "on retrospective reports as a source of information in the area of personality development. Retrospective reports have provided much of the substance in studies concerned with the role of early experience, child rearing, and parental functioning in personality development; and, to a very great extent, the Ss—parents and children—have been their own reporters. Endorsement of these procedures as yielding 'hard' research data is open to question on several grounds: Just how much can be observed by a participant O? How much can be retained and reported in retrospect? How much interference lies in the reporter and his involvement in the content of his recollections?"—A. Barclay.

Social Behavior

10608. Anant, Santokh S. (U. Lethridge, Alberta, Canada) **Belongingness and socialization: A developmental theory of belongingness.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Sep), Vol. 13(2-3), 102-112.—According to psychoanalytic theory, a permissive environment would eliminate repression and conflict. The author, in his own work, found that many disturbed high school students came from permissive environments. Infants need to be cuddled and played with. Development of a feeling of belongingness is important for the emotional adjustment of the child. Importance of siblings for the development of this feeling has been demonstrated. The belongingness relationship may also be developed with parents of peers. The role of cultural-social factors in the development of belongingness is made clear by a comparison of primary and secondary group societies. The need to belong is probably innate. (36 ref.)—R. D. 10619. Slaby, Ronald G. (U. Wisconsin) **Aggressive and helpful verbalizations as regulators of behavioral aggression and altruism in children.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6958-6959.

10620. Spiegler, Michael D. (Vanderbilt U.) **The effects of commonality of modeled responses and vicarious punishment on imitative acceptance and recall.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6269.

10621. Tudor, Jeannette F. (Central Michigan U.) **The development of class awareness in children.** *Social Forces*, 1971(Mar), Vol. 49(3), 470-476.—Cognitive, behavioral, and evaluative dimensions of class awareness were related to the age, sex, intelligence, and social class backgrounds of children. 216 1st, 4th, and 6th graders of a public school system were tested with a picture test devised for this study. On the behavioral test (perception of social differences), age and sex were related to performance. On the behavioral test (recognition of behavioral correlates to cognitive cues), age, social class, and IQ were related to performance. The evaluative test (attachment of evaluations on the basis of cognitive cues), showed no significant results. Possible reasons for this are discussed.—S. Blackman.

Parent-Child & Family Relations

10622. Gordon, Edmund W. (Teachers Coll., Columbia U.) **"Parent and child centers: Their basis in the behavioral and educational sciences": An**

invited critique. *American Journal of Orthopsychiatry*, 1971(Jan), Vol. 41(1), 39-42. Critiques J. McV. Hunt's (see PA, Vol. 46:Issue 6) article in which he underlines theoretical bases for intervention in the development of young children, and also advocates intervention with parents in order to change the quality of a child's environment. The work is thought to suffer from insensitivity to political reality, not considering what might result from changes in society's maltreatment of the poor.—P. Hertzberg.

10623. Hillenbrand, Elizabeth D. (George Washington U.) **Father absence in military families.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6902-6903.

10624. Hunt, J. McV. (U. Illinois) **Parent and child centers: Their basis in the behavioral and educational sciences.** *American Journal of Orthopsychiatry*, 1971(Jan), Vol. 41(1), 13-38. Intervention aimed at teaching poverty mothers greater skills in child rearing can achieve gains in the measured competence of their children, and also enrich the lives of the parents. It is noted that the most obvious differences in competence exist between social classes rather than between races. Evidence from the behavioral and educational sciences is cited to support the belief (a) in the plasticity of behavioral development; (b) that a mutual interrelationship exists between lack of competence and poverty; (c) that competence does not develop automatically in genotypes of even the highest potential; and (d) that parents of poverty can be taught to become effective teachers of their young. (94 ref.)—*Journal abstract.*

10625. Sweet, June R. & Thornburg, Kathy R. (U. Missouri) **Preschoolers' self and social identity within the family structure.** *Journal of Negro Education*, 1971(Win), Vol. 40(1), 22-27.—Focused on the young child's comprehension of the family structure. The instrument was administered to 60 black and 60 white 3-5 yr. old Ss. The 1st task required that the S exhibit some ability to identify himself before he was expected to indicate his understanding of familial labels. Ss identified first with the members of the same sex and race. The findings were in agreement with previous studies. The succeeding tasks were administered and determined the S's ability to understand and verbalize his knowledge of the family. Age was a significant factor: 5-yr-old Ss scored higher than 4-yr-old Ss; and those who were 4 yr. old scored higher than 3 yr. olds. At each age level white Ss scored significantly higher than black Ss on familial tasks. There was no significant difference between boys and girls in the performance scores for this concept.—*Journal summary.*

ADOLESCENCE

10626. Adcock, Cyril J. & Martin, William A. (Victoria U., Wellington, New Zealand) **Flexibility and creativity.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 71-76.—In a study of closure factors in relation to creativity, a battery of 16 tests was administered to 188 10th graders. The resulting data plus other items of information were then subjected to a factorial analysis by computer. Of the 8 (oblique) factors which ultimately appeared, 6 were found to be germane to this study: 3 figural closure factors, 2 flexibility of closure (creativity) factors, and an academic achievement factor. These findings filled in a gap in the C. J. Adcock and M.

Webberley (see PA, Vol. 46:Issue 6) schema, and a suggested modification reducing this to a 7×2 form is presented.—*Author abstract.*

10627. Cashdan, Sheldon. (U. Massachusetts) **Social participation and sub-cultural influences in the study of adolescent creativity.** *Adolescence*, 1971(Spring), Vol. 6(21), 39-52.—Presents a synopsis of the author's views on creativity as multidimensional, with emphasis on talent and culture as 2 of these dimensions.—A. B. Warren.

10628. Crosby, John F. (Indiana U.) **The effect of family life education on the values and attitudes of adolescents.** *Family Coordinator*, 1971(Apr), Vol. 20(2), 137-140.—Attempted to determine whether attitudes held by adolescents toward themselves and their families could be changed in a positive direction as a result of participation in a 1-semester course in family life education. The 3 experimental and 3 control groups (public school girls, public school boys, and private school boys), were tested at the beginning and end of the semester. Pre- and posttests were identical: (a) a 25-item multiple-choice test designed to measure knowledge about human development, (b) a 50-item self-concept inventory designed to determine how an adolescent feels about himself, and (c) the Elias Family Opinion Survey. Results showed that students who took the family life education course achieved a greater knowledge of the concepts covered in the course curriculum, and had greatly improved self-concepts. While there was not a significant change in the adolescent's attitude toward his family, there were increasing degrees of familial acceptance and understanding.—M. W. Linn.

10629. Georis, Pol. (U. Brussels, Belgium) **Jeunesse inadaptée et intérêt professionnel.** [Job interests of maladapted youth.] *Revue Belge de Psychologie et de Pédagogie*, 1970(Jun), Vol. 32(130), 33-49.—A 210-item questionnaire covering 39 jobs, originated by R. Pasquasy and modified by the author, was given to 110 adolescents. Results were then compared with other research using the original instrument. Included are charts, tables, graphs, etc., concerning the relationship of age, IQ, and choice, as well as lists of jobs and the extent to which they were preferred. Despite the provocative results, the author cautions against the use of the results apart from a total battery of tests, and until the data have been followed up through time by means of longitudinal studies, as well as observation.—L. A. Ostlund.

10632. Müller, Michael. (Berlin-Kreuzberg District, School Psychological Advisory Bureau, W. Germany) **Was sich hinter einem "stillen" Kind an Problemen verbergen kann: Kasuistische Darstellung eines Schulversagens.** [Problems that can be hidden behind a "quiet" child: Case history of a school failure.] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1970(Oct), Vol. 19(7), 261-265.—The school failure of a 14-yr-old high school boy seemed to be the result of tensions between the family members and within the child.

Treatment aimed at the reduction of these tensions is suggested.—H. A. Euler.

10633. Nelson, Deane D. (Moorehead State Coll.) **A study of personality adjustment among adolescent children with working and nonworking mothers.** *Journal of Educational Research*, 1971(Mar), Vol. 64(7), 328-330.—Sought to determine if there was a difference in personality adjustment as measured by the Minnesota Counseling Inventory (MCI) among 312 9th graders who were categorized according to their mothers' work history. The principal statistical model used for analyzing the differences in groups was analysis of variance—treatments by levels design. Findings reveal that (a) in all instances, the personality adjustment (as evidenced by MCI scores in 8 areas) of boys was better when the mother worked full time than if she worked part time or not at all; (b) the personality adjustment of girls did not follow a consistent pattern regarding the employment history of their mothers; and (c) on the majority of the MCI scales, girls with nonworking mothers had better adjustment scores than girls with mothers who worked either full or part time.—*Journal abstract*.

10637. Price, Joseph V. (Atlanta Adolescents Pregnancy Program, Ga.) **Adolescents/youth.** *American Journal of Orthopsychiatry*, 1971(Mar), Vol. 41(2), 293-306.—Presents digests of 13 of the papers presented at the 48th annual meeting of the American Orthopsychiatric Association in 1971. Topics covered include the adolescent father; family therapy with delinquents; studies of teen-age drug users; a follow-up study of unwed mothers; family planning among pregnant black adolescents; therapeutic abortions in adolescence; and survival camp training for delinquents.

10638. Purpura, Peter A. (Fordham U.) **A study of the relations between birth-order, self-esteem and conformity.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6266.

10639. Rode, Alex. (George Washington U.) **Perceptions of parental behavior among alienated adolescents.** *Adolescence*, 1971(Spr), Vol. 6(21), 19-38.—263 adolescents were given the short alienation scale and the parent behavior inventory. Correlations and factor analyses indicate that "individually alienated adolescents of both sexes perceive their parents, and particularly their mothers, as hostile, non-accepting, and as exercising control through psychological means such as the instilling of persistent anxiety. In adolescence, they tend to reject their parents—again, especially their mothers—whatever the nature of the parent-child relationship might have actually been at an earlier time."—A. B. Warren.

10640. Schiamberg, Lawrence B. (U. Illinois) **An exploratory study of adolescent alienation: An**

examination of selected theories and research. *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6412-6413.

10641. Sterk, Sam. (197 North St., Buffalo, N.Y.) **Adolescent personality growth as a function of a counselor-in-training program.** *Adolescence*, 1971(Spr), Vol. 6(21), 93-106.—Studied the effects of training to be a counselor at a summer camp. The Minnesota Counseling Inventory was given before and after training to 13 boy and girl trainees. Significant differences attributable to training were found.—A. B. Warren.

10642. Thornburg, Hershel D. (U. Arizona, Coll. of Education) **Peers: Three distinct groups.** *Adolescence*, 1971(Spr), Vol. 6(21), 59-76.—Differentiates high school, noncollege, and college youth in terms of attitudes and values.—A. B. Warren.

10643. Wagner, Hilmar. (U. Texas, School of Education) **The increasing importance of the peer group during adolescence.** *Adolescence*, 1971(Spr), Vol. 6(21), 53-58.—Presents the author's ideas on the functions of the peer group in adolescence.—A. B. Warren.

10644. Weinreb, Howard R. (U. Maryland) **A comparison of the temporal perspectives and attitudes toward time of rural and urban adolescents.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6249.

10645. Welsh, George S. (U. North Carolina, Chapel Hill) **Vocational interests and intelligence in gifted adolescents.** *Educational & Psychological Measurement*, 1971(Spr), Vol. 31(1), 155-164.—Describes 4 new SVIB scales: S-1, high origence (preference for open, diffuse tasks), low intellectence (preference for the concrete); S-2, high origence, high intellectence (preference for the abstract); S-3, low origence (preference for the structured), low intellectence; and S-4, low origence, high intellectence. Ss were gifted adolescents who had participated in a prior study, receiving Terman's Concept Mastery Test and the D48 Test. Correlations were run between the ability and the interest scales. Interest scores were more highly correlated with verbal than nonverbal ability. S-1 and S-3 correlated negatively but S-2 and S-4 correlated positively with ability. Illustrative discussion of the relationships between interest and ability scales show verbal intelligence to be related to S-2, Psychology and Psychiatry scales. Other relationships suggest an interaction between ability and interest in the adolescents studied.—N. M. Chansky.

ADULTHOOD & OLD AGE

10646. Palmore, Erdman. (Ed.) (Duke U.) **Normal aging.** Durham, N.C.: Duke U. Press, 1970. xxiv, 431 p.—Presents the comprehensive report of the Duke Longitudinal Study of Aging, a 13-yr interdisciplinary project investigating the physical, mental, and social processes of aging among normal community residents. Papers by various investigator-authors, well known in the field of gerontology, cover topics of interest to researchers, academicians, professionals, and students in all aspects of the field.

10647. Postema, Leonard J. (Michigan State U.) **Reminiscing, time orientation, and self-concept in aged men.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6880-6881.

SOCIAL PSYCHOLOGY

10648. Ansbacher, Heinz L. (U. Vermont) **Individual**

psychology as ethical belief: Recognition by a Selective Service Board. *Journal of Individual Psychology*, 1971(May), Vol. 27(1), 44-45. Reports a case in which a local Selective Service Board recognized conscientious objection which was based partly on the writings of Alfred Adler.—A. R. Howard.

[Ethology and ethics: With regard to a work by Wolfgang Wickler.] *Revue de Psychologie et des Sciences de l'Education*, 1971, Vol. 6(1), 76-84.—Analyzes W. Wickler's work on the phylogenetic determinants of sexual and social relations. Implications drawn by the author for a confrontation between ethics and natural sciences are briefly discussed. (Flemish summary)—English summary.

10650. Hsu, Francis L. (Northwestern U.) *Psychosocial homeostasis and jen: Conceptual tools for advancing psychological anthropology*. *American Anthropologist*, 1971(Feb), Vol. 73(1), 23-44.—Considers that the basic importance accorded personality in psychological anthropology has obscured the understanding of how Western man lives in Western society and culture, or how any man lives in any society and culture. What is missing is the central ingredient in the human mode of existence: man's relationship with his fellow men. The concepts of psychosocial homeostasis and jen are designed to extricate psychological anthropology from this intellectual prison. The 1st describes the process whereby every human individual tends to seek certain kinds of affective involvement with some of his fellow humans. The 2nd refers to the internal and external limits of the individual's affective involvement. With the aid of 5 major hypotheses based on these concepts, a review is made of familiar facts drawn from China, the United States, and Japan. (29 ref.)—*Journal abstract*.

10651. Kallen, David J. (Michigan State U., Coll. Human Medicine) *Nutrition and society*. *JAMA: Journal of the American Medical Association*, 1971(Jan), Vol. 215(1), 94-100. Malnutrition during development leads to high infant mortality and smaller physical size. While severe malnutrition may lead to intellectual impairment, the direct relationship between moderate malnutrition and intelligence is still unknown. This is because both nutrition and intellectual development are associated with various social factors. While malnutrition is a medical problem, hunger is a social problem, complicated by the fact that the hungry are also subject to various other noxious social conditions. The negative effect of moderate malnutrition may stem from apathy in learning and other situations which relate to life success. It is noted that the persistence of hunger in the midst of affluence may well create as well as reflect attitudes and values among the affluent which are at serious variance with the values of democracy and equality. (41 ref.)—*Journal abstract*.

10652. Kline, Carl L., Rider, Katherine; Berry, Karen, & Elrod, J. McRee. (Children's Aid Society of Vancouver, British Columbia, Canada) *The young American expatriates in Canada: Alienated or self-defined?* *American Journal of Orthopsychiatry*, 1971(Jan), Vol. 41(1), 74-84.—Examines the response of increasingly large numbers of American young men to compulsory military service by emigration to Canada. Interviews were conducted on 30 military refusers and the wives of 16 who were married. There were 10 Ss in

each of the following categories: (a) draft refusers with landed immigrant status who were in Canada for more than 18 mo.; (b) draft refusers in Canada for less than 6 mo. with landed immigrant status; and (c) deserters with landed immigrant status. Viewing interaction between these men (and their wives) and their families, their society, and their new country of choice, provides insights into their commitments vs. their alienation.—*Journal abstract*.

10654. Schacht, Richard. (U. Illinois) *Erich Fromm and Karen Horney*. In R. Schacht, "Alienation." (See PA, Vol. 46:Issue 6) 115-152.

10655. Hosman, Jan & Borg, Gunnar. (U. Stockholm) *The metric structure of verbal expressions: A further investigation*. *Reports from the Institute of Applied Psychology, U. Stockholm*, 1970, No. 12, 18 p.—The metric properties of the adverbs unusually, quite, very, pretty, rather, somewhat, and slightly were investigated by pairing them with the adjectives long and short. The subjective intensities corresponding to the verbal expressions were measured with the method of equal ratio setting using line length as matching continuum. The scale values for the verbal expressions were invariant up to a constant of proportionality under change of experimental conditions indicating that verbal expressions are measurable on a ratio scale. The variability of the individual scale values varied with experimental conditions. Results indicate that the frame of reference has a decisive influence on the degree of preciseness with which verbal expressions are used. (19 ref.)—*Journal abstract*.

CULTURE & SOCIAL PROCESSES

10656. Ekeh, Peter P. (U. California, Berkeley) *Dreams and society: A sociological analysis of Nigerian dreams*. *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6713-6714.

10657. Hoffman, Gretel H. (U. Minnesota) *Life on the upper Mississippi: Social and psychological adaptations in a marginal rural area*. *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 5774-5775.

10658. Johnson, Cornelia T., et al. (U. Connecticut, Health Center, Hartford) *Changing roles, laws, life styles*. *American Journal of Orthopsychiatry*, 1971(Mar), Vol. 41(2), 233-250.—Presents digests of 16 of the papers presented at the 48th annual meeting of the American Orthopsychiatric Association in 1971. Topics covered include new mental health personnel; problems of the psychoanalyst in an evolving society; alternatives to the mental health model; abortion; and problems of special population groups, including the aged, draft dodgers, and the black woman.

10659. Lester, David. (Suicide Prevention & Crisis Service, Buffalo, N.Y.) *Suicide and mutilation behaviors in non-literate societies*. *Psychological Reports*, 1971(Jun), Vol. 28(3), 801-802.—Examined a sample of nonliterate societies to determine whether there was an association between practices of mutilation and self-torture and the incidence of suicidal behavior. No association was found.—*Journal abstract*.

10660. Longres, John F. (U. Michigan) *Social conditions related to the acceptance of modern*

medicine among Puerto Rican women. *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6716.

10661. Maslow, Abraham H. & Honigsmann, John J. (Eds.) **Synergy: Some notes of Ruth Benedict.** *American Anthropologist*, 1970(Apr), Vol. 72(2), 320-333.—Presents excerpts from the 1941 lectures of Ruth Benedict which call attention to the correlation between social and character structure, especially aggressiveness. Social orders characterized by high or low synergy, by a syphon or a funnel system of economic distribution, are compared for their different capacities to support or humiliate the individual, render him secure or anxious, or minimize or maximize aggression. Religion, an institution in which people apotheosize the cooperation or aggression their cultural life arouses, is described as differing between societies with high and low synergy.—*Journal abstract*.

10662. Rappaport, Julian, et al. (U. Illinois) **Class issues: Racial, social, economic.** *American Journal of Orthopsychiatry*, 1971(Mar), Vol. 41(2), 251-260.—Presents digests of 8 of the papers presented at the 48th annual meeting of the American Orthopsychiatric Association in 1971. Topics covered include consultation to the poor, delinquent behavior, black-white marriages, studies of poverty children, and consultation in a black urban ghetto.

10663. Young, David E. (Stanford U.) **A socio-psychological analysis of color preference in Japan.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6396-6397.

Ethnology

10664. Blum, Zahava D. & Coleman, James S. (Johns Hopkins U., Center for Social Organization of Schools) **Longitudinal effects of education on the incomes and occupational prestige of blacks and whites.** *Center for Social Organization of Schools Report*, Johns Hopkins U., 1970(Jun), No. 70, 63 p.—Analyzed the life history data of a national sample of black and nonblack males who reached the ages of 30-39 in 1968 to examine differences in occupational growth. The lower levels of occupational growth attained by blacks in income and prestige were found to be due to lower growth rates rather than lower starting points. The relatively small continuous effect of education on income was slightly smaller for blacks than for nonblacks. For blacks, the positive effects of education were eroded by unmeasured factors which made high incomes less stable than for nonblacks. The continuing effects of educational levels on occupational prestige were somewhat larger than on income. While these effects were greater for nonblacks, the occupational prestige of blacks was more stable. The effect of education and the greater regression effect seemed to balance each other, with the result that the black and nonblack distributions of prestige remained in the same relative positions. For blacks, mother's education was of greater importance to son's educational attainment than father's education and occupation. For nonblacks, these 3 factors were of approximately equal weight. When the son's own education was controlled, these factors had minimal effect on income and prestige, except for the direct effect of mother's education on the income of blacks. (24 ref.)—*Journal abstract*.

10665. Cameron, Paul. (U. Louisville) **Personality differences between typical urban Negroes and**

whites. *Journal of Negro Education*, 1971(Win), Vol. 40(1), 66-75.—416 whites and 200 blacks were proportionally selected from census tracts. Ss were interviewed by 250 college students and asked to complete "varying combinations" of (a) the Canter short form of the Barron Ego Strength scale, (b) the Eysenck Personality Inventory, (c) the Cameron religious dimensions scale, (d) the Sarason Hostility scale, (e) the Berdie masculinity-femininity checklist, and (f) 2 rating scales using F tests. Results indicate that blacks were less neurotic, more candid, less hostile, more "claimed judged liking by the generalized other," and more religious. Results are discussed, and it is concluded that "both populations appear far more similar psychologically than different."—W. E. Sedlacek.

10666. Gue, Leslie R. (U. Alberta, Edmonton, Canada) **Value orientations in an Indian community.** *Alberta Journal of Educational Research*, 1971(Mar), Vol. 17(1), 19-31.—Florence Kluckhohn's theory on method was used to examine the value orientation of several Canadian Indian groups. Among the dimensions examined were relational (lineality, collaterality, and individualism), man-nature (harmony and mastery), and activity (being and being in becoming). Contrasts were made between the children of Indians with whom the government had made treaties and those métis with whom no treaty was in existence. Among the differences noted were that métis stressed individualism more than did treaty children. Treaty children were, moreover, more indecisive. In the activity area, métis put "doing orientation" in 1st place whereas treaty children placed "being in becoming" 1st. Other findings suggest congruence between Indian and non-Indian peoples in several areas assessed in the study, suggesting potential areas of cooperation between the groups.—N. M. Chansky.

10667. Loye, David. (New School for Social Research) **Kurt Lewin and the black-and-white sickness.** *Psychology Today*, 1971(May), Vol. 4(12), 70, 73-76.—Lewin will be remembered for his conception of action research which is very relevant for contemporary social problems, e.g., (a) in the 1930s and 1940s he demonstrated how America's racial tensions could be reduced, (b) he saw that black pride was an essential ingredient in the advancement of blacks, and (c) was able to reduce prejudice against Jewish applicants to American colleges. His ideas about attitude change suggest that present national civil rights policies may permit antiblack prejudice to become as strong as in past decades.—E. J. Posavac.

Social Structure & Social Role

10668. Allen, Robert F. (Newark State Coll., Lab. of Applied Behavioral Sciences) **Keine Rolle für Unbeteiligte: Eine Erwiderung zu dem Aufsatz von Martin Lakin.** [No role for nonparticipants: A rejoinder to Martin Lakin's article.] *Gruppendynamik*, 1970(Jul), No. 3, 270-271.—In many respects M. Lakin's reasonings in his article "Training for Mississippi" are accepted. To his factors for the trainers' failure a more important and basic one is added, that is the long history of apathy of behavioral scientists in important movements for democratic changes in society. This lack of participation has led to the image of behavioral scientists as defenders of the status quo and of the existing power structure. While Lakin considers idealism and involve-

ment incompatible with trainers' task, the author pleads for identification with and action for the cause. The author believes it is insufficient to speak of democratic process and dedication to humanity. People like to have these images but lack of fighting for these ideals contradicts their beliefs. Values for which verbal commitments have been made have to be reexamined and be followed.—*M. J. Stanford.*

10669. Dixit, Ramesh C. & Sharma, Deo D. (U. Jodhpur, India) **Transformation of social and religious values of different castes.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Sep), Vol. 13(2-3), 117-119.—Since 1947, the year of India's freedom, its society has been increasingly acknowledging the obligation to care for various types of disadvantaged persons. This concern reflects a regard for freedom and equality. The present investigation studied the transformation of caste-originated values of educated Ss. A modified Allport-Vernon-Linzey Study of Values was administered. Ss were 80 males randomly selected from the high schools and a university. The meaning and function of caste appear to be changing rapidly. Preferences and privileges granted by the government to the Sudras (untouchables) have resulted in a greater feeling of social superiority over other castes. Educated people have changed much more than the uneducated in respect to caste attitudes.—*R. D. Nance.*

10670. Gough, Harrison G. (U. California, Berkeley) **A cluster analysis of Home Index status items.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 923-929.—Examined the internal dimensionality of the Home Index, a measure of socioeconomic status. A cluster analysis of the item matrix was conducted, using 1,379 student protocols drawn from 14 high schools. 4 clusters were identified: social status, ownership, sociocivic involvement, and aesthetic involvement. Intercorrelation of clusters in new samples of 379 males and 383 females yielded coefficients ranging from .21-.38, with median of .28. Scores were also related to scholastic achievement, intellectual ability, and father's occupation. Normative data from a sample of 2,284 Ss are presented. (20 ref.)—*Journal abstract.*

10671. Han, Wan S. (Seoul National U., S. Korea) **Alienation, deviation-proneness, and perception of 2 types of barriers among rural adolescents.** *Social Forces*, 1971(Mar), Vol. 49(3), 398-413.—Accounts for rural adolescents' powerlessness alienation and deviation-proneness in terms of their perception of 2 types of limited "reality" (limited opportunity and limited ability). These perceived limitations are interpreted to be the main barriers in the pursuit of success goals in a mobile society where the ideology of success and ability-based-achievement is culturally extolled. Ss were divided into 4 types in terms of 2 independent variables, aware and not-aware of limited opportunity and aware and not-aware of limited ability. These 4 types were comparatively analyzed. The perception of opportunity limitations was treated as a symbolic variable and was assessed for its influence on powerlessness and anomie as compared with that of family status as a structural variable. Perception of limited opportunity (PLO) was a better predictor of alienation than socioeconomic status of origin (SESO). A multivariate analysis further suggests that PLO as a definition of the situation operates as an "interpretative-intervening" variable without which SESO has little effect on adolescents' alienation. The influence of PLO upon powerlessness was not greater

among those with high perception of limited ability (PLA) than among those with low PLA. *S. Blackman.*

10672. Kaley, Maureen M. (State U. New York, Downstate Medical Center, Brooklyn) **Attitudes toward the dual role of the married professional woman.** *American Psychologist*, 1971(Mar), Vol. 26(3), 301-306.—Evaluated the attitudes of professional men and women toward the married professional woman's dual role in terms of 6 variables. Data were based on 60 of 90 questionnaires sent to persons affiliated with a university research organization and a social service agency. There were significant differences within the group for the variables of sex and profession but no significant differences for education, age, race, and professional experience. Findings indicate that while married professional women had positive attitudes toward the professional woman's dual role, negative attitudes were held by the case workers and the married professional men. It is concluded that negative attitudes toward this dual role both in- and outside of the professional community may indicate why few women prepare for and pursue professional careers. (21 ref.)—*P. McMillan.*

10673. Parker, Seymour & Kleiner, Robert J. (U. Utah) **The culture of poverty: An adjustable dimension.** *American Anthropologist*, 1970(Jun), Vol. 72(3), 516-527.—Examines the D. Moynihan report on the existence of a subculture of poverty among the Negro poor. Some sociologists and anthropologists feel that much of the "deviant behavior" of this group is actually normative and transmitted in the socialization process, while others maintain that such behavior is not normative and represents merely situational responses to extreme poverty and other forms of deprivation. Interviews with 1,489 20-60 yr. old urban Negroes and 1,423 mentally ill Negroes in the same age range from the same city indicate that Negroes living in poverty hold attitudes (a) that can be characterized as a "subculture of poverty;" (b) that such attitudes represent but 1 segment of the total range of attitudes and reference values held by this population, many of which are shared by the larger society; and (c) that these attitudes serve to maintain the mental health of those living in a severely disadvantaged social situation. (21 ref.)—*Journal abstract.*

10674. Sigh, Narayan P. (Delhi U., India) **N/Ach, risk-taking and anxiety as related to age, years of schooling, job-experience and family: Commitment among progressive-traditional, successful-unsuccessful agricultural entrepreneurs of Delhi.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Sep), Vol. 13(2-3), 113-116.—Little empirical evidence has thus far been available to describe precisely the relationship of psychological and physical variables in entrepreneurship. The present study attempts to fulfill that need. Different subgroups of agricultural entrepreneurs of Delhi were studied. 80 farmers, 1/2 successful and 1/2 unsuccessful, were drawn randomly. They came from 4 traditional and 4 progressive border villages. 3 tests were administered individually to the Ss. Of 108 correlation coefficients, 6 were significant.—*R. D. Nance.*

Religion

10675. Anderson, George C. (Academy of Religion & Mental Health, New York, N.Y.) **Maturing religion.** *Pastoral Psychology*, 1971(Apr), Vol. 22(213), 17-20.

—The mature individual is a symbol rather than a fact. A person develops or uses his religion according to his psychological needs. The nature of these needs determines the nature of one's religion. But applying mental health criteria to religion is a limited approach. The "search for meaning is what makes man religious, whether he be healthy or not."—O. Strunk.

10676. **Ansbacher, Heinz L.** (U. Vermont) **Religion and individual psychology: Introduction.** *Journal of Individual Psychology*, 1971(May), Vol. 27(1), 3-9.—Depicts Alfred Adler as "an original humanistic psychologist," appreciated by clergymen of different religious persuasions.—A. R. Howard.

10677. **Broadus, Loren.** (Lexington Theological Seminary, Ky.) **A constructive approach to frustration in the practice of ministry.** *Pastoral Psychology*, 1971(Apr), Vol. 22(213), 39-44.—Defining frustration as the feeling which results when a goal is not attained or not attainable at the desired time, it is claimed that frustration blocks creativity and wastes time and energy. Effectively dealing with frustration involves (a) becoming intellectually aware of frustration as a problem, (b) identifying the cause of frustration, (c) deciding on a course of action, (d) deciding when the action will take place, and (e) acting itself.—O. Strunk.

10678. **Cassel, Russell N.** (U. Wisconsin, Milwaukee) **Psychological aspects of religion in the life of man.** *National Catholic Guidance Conference Journal*, 1971(Spr), Vol. 15(3), 205-207.—Discusses (a) the relation between religion and psychology, and (b) the union of man with God. Also discussed in relation to the latter is the expression of this movement to union as religion and its role, behavioral rewards and sanctions, conscience, and the ego ideal and its strength.—A. M. Cawley.

10679. **Davison, James E.** (Free U., Amsterdam, Netherlands) **On transference.** *Pastoral Psychology*, 1971(Apr), Vol. 22(213), 21-28.—Generally, "it would be better for pastors to be aware of transference and to be on the lookout for it, but not to attempt to foster it . . . Such knowledge of and ability to use transference will provide the pastor with 1 more means of understanding his parishioners . . . 1 more way of helping them to build more enriching roles as whole persons." (18 ref.)—O. Strunk.

10680. **Ferrell, Donald R.** (Doane Coll.) **Anxiety and the death of God.** *National Catholic Guidance Conference Journal*, 1971(Spr), Vol. 15(3), 200-205.—Attempts to use the Judeo-Christian perspective to give a theological analysis of anxiety—in the time of the death of God. Presents the difficulties involved because the precursors, Nietzsche, Freud, Marx, Blake, Buber, and Tillich, have so little common agreement as to the meaning of the claim that God has died. The aloneness in which man is left generates anxiety for the future as he projects it in the light of his value system. How do we trust in a world without God? Uncertainly, is it manifested in the drug experience, in the attempt to humanize institutions, in commitment to the here and now?—A. M. Cawley.

10681. **Hall, Robert W.** (U. Vermont) **Alfred Adler's concept of God.** *Journal of Individual Psychology*, 1971(May), Vol. 27(1), 10-18.—Adler views God both "as a synthesis of Being and Value, and as a being that is to be imitated by man whereby man strives for an imitatio dei." His conception aims to further his ideal of community. "If the feeling of inferiority present in man

is complemented by the development of his tendency towards God or the societal community, the individual will attain the appropriate self-realization."—A. R. Howard.

10682. **Nelson, Marvin O.** (Rockland Community Coll.) **The concept of God and feelings toward parents.** *Journal of Individual Psychology*, 1971(May), Vol. 27(1), 46-49.—Results on the Q-Test for Parent-Deity Concepts provided by 84 Ss supports Adler's view of the concept of God as "concretization and interpretation of the human recognition of greatness" rather than Freud's view of the God concept as the projection of one's attitude toward his father.—A. R. Howard.

Cross Cultural Comparison

10683. **Child, Irvin L.** (Yale U.) **The experts and the bridge of judgment that crosses every cultural gap.** *Psychology Today*, 1968(Dec), Vol. 2(7), 24-29.—A comparison of the judgments of the relative aesthetic quality of 3,133 pairs of paintings made by expert judges revealed a very large degree of agreement. Cross-cultural studies showed that: (a) the men of a Bantu tribe, Bakwele, most familiar with ritual masks, (b) Japanese potters, and (c) native artists on the Fiji Islands agreed with the judgments of Western art experts to a statistically significant degree. In some studies Western art was used and sometimes local art was used. These relationships suggest that there is some generality to aesthetic principles and that there may be personality similarities among those who do become artists regardless of culture.—E. J. Posavac.

10684. **Day, Harry R.** (Cornell U.) **A cross-national study of coalition formation: Philippines versus United States.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6713.

10685. **Dayal, Ishwar & Saiyadain, Mirza S.** (Indian Inst. of Management, Ahmedabad, India) **Cross cultural study of behaviour in groups.** *Indian Psychological Review*, 1969(Jul), Vol. 6(1), 8-13.—Reports on the nature of group processes in a laboratory situation in India and provides a cross-cultural comparison with the findings from Western studies. 57 undergraduates were randomly divided into 4 groups. The study had 2 phases of group discussions, each of 40 min. duration. Results showed that effectiveness of the groups engaged in tasks depends upon a number of things, i.e., how involved are the members of the group task, how they are accepted by the group, and what kind of interaction exists in the group. Cross-cultural similarities in group processes are noted.—K. C. Panda.

10686. **Fay, Todd L.** (Northwestern U.) **Culture and sex differences in concepts of sex role and self.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6239.

10687. **Inomata, Satoru & McGinnies, Elliott.** (Shiga U., Otu-City, Japan) **Social attitudes among Japanese and American teenagers: I. Girls.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Sep), Vol. 13(2-3), 88-101.—Since 1945, the Japanese have adopted many of the practices of American-style democracy. Japanese adolescents have grown up in this new climate. The present survey was patterned after one done with American teen-agers 11 yr. earlier. 46 prefectures were classified with respect to selected ecological variables. The final sample included 2,010 11-18 yr. old girls, and was considered to be repre-

sentative of the more than 7 million Japanese girls that age. Items covered included orientation to the future, family setting, friendship and dating, and activities and interests. Findings provide a basis for understanding the changing role of youth in Japanese society.—R. D. Nance.

10688. Mar'i, Sami K. (U. Wisconsin) **Creativity of American and Arab rural youth: A cross-cultural study.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6407.

10689. Rosenblatt, Paul C. (U. Minnesota) **Communication in the practice of love magic.** *Social Forces*, 1971(Mar), Vol. 49(3), 482-487.—In a cross-cultural study of 23 societies, evidence is presented in support of the hypothesis that love magic (magical rather than direct activity designed to win a desired sex object) is often, perhaps ordinarily, a form of indirect communication in the development of male-female bonds. Among the accomplishments of indirect communication by means of love magic are anxiety reduction and face-saving for practitioners and various things that may promote success, e.g., flattery of the victim, a disposition in the victim to reciprocate interest, and a sense of intrigue. It is also suggested that the use of go-betweens may be in part a functional alternative to love magic.—S. Blackman.

10690. Scribner, Sylvia. (New School for Social Research) **A cross-cultural study of perceptions of mental disorder.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6246.

Family

10691. Bullough, Vern L., Bullough, Bonnie; Voight, Martha, & Kluckhohn, Lucy. (San Fernando Valley State Coll.) **Birth order and achievement in eighteenth century Scotland.** *Journal of Individual Psychology*, 1971(May), Vol. 27(1), 80. Finds support for the eminence of 1st-born children in a sample of 227 persons born between 1685-1785.—A. R. Howard.

10692. Dielman, Teddy E. (U. Hawaii) **A multivariate investigation of correlates of child behavior in a Hawaiian community.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6925.

10693. Goodwin, Beatrice. (New York U.) **An investigation of the relationship between psychoprophylaxis in childbirth and changes in concept of self and concept of husband.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6714.

10694. Hinkle, John E. & Moore, Marvin. (Colorado State U.) **A student couples program.** *Family Coordinator*, 1971(Apr), Vol. 20(2), 153-158.—Describes a series of workshops that have been developed at a university. The workshops are conducted for married and engaged college students who already have a healthy relationship. Focus is on the teaching of concepts and exercises for improving communication, expressing affection, and learning constructive fighting techniques. Workshop content and format are described in adequate detail, with sufficient pre- and postevaluation. Also included is feedback from the couples to show strong benefits from the workshops toward the goal of relationship enrichment.—M. W. Linn.

10695. Marsh, Kenneth F. (U. North Carolina, Chapel Hill) **Interdependence of self-concepts in marital dyads.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6907.

10696. Richardson, Charles E. (Southern Illinois U.) **Education for family planning.** *Journal of School Health*, 1969(Oct), Vol. 39(8), 537-543.—Discusses some of the major unresolved problems in the area of education for family planning.—G. S. Spitzer.

Social Change & Social Programs

10697. Abu-Laban, Baha. **Factors in modernization of Lebanese youth.** *Revue Internationale de Sociologie*, 1970(Dec), Vol. 6(1-3), 40-54.—Reports on part of a 1965 questionnaire survey of values and social behavior of 2,466 predominantly male students in 25 Lebanese secondary schools. Indicators of modernization (positive attitudes toward residential mobility and working wives) and differences in mass media exposure were related to ethnic, religious, regional, and social class variables. Modernization trends were strongest among rural, Moslem, Armenian youth.—C. Mayo.

10698. Anderson, David A., et al. (U. Rochester) **Changing structures: Social, institutional, economic.** *American Journal of Orthopsychiatry*, 1971(Mar), Vol. 41(2), 213-232.—Presents digests of 18 of the papers presented at the 48th annual meeting of the American Orthopsychiatric Association in 1971. Topics covered include use of the ombudsman—a liaison between clients and administrators—in institutions, bureaucratization vs. positive organizational change in mental health institutions, change in the black community, social work training, influence of mass media on national health insurance, and mental health care.

10699. Crawford, Thomas J. (U. California, Berkeley) **Value judgments and judgments about values: A reply to Sawyer.** *Psychiatry, Washington, D.C.*, 1971(Feb), Vol. 34(1), 99-102.—Discusses J. Sawyer's critique (see PA, Vol. 46:Issue 5) of the T. J. Crawford and M. Naditch (see PA, Vol. 45:8061) article. It is stated that although Crawford and Naditch are aware of altruistic ethics among students, competitive materialistic orientations "are the prevailing mode in U.S. society."—E. M. Uprichard.

10700. Flacks, Richard. (U. Santa Barbara) **Protest oder Konformität: II. Sozialpsychologische Perspektiven der Legitimität.** [Protest or conformity: II. Sociopsychological perspectives of legitimacy.] *Gruppendynamik*, 1970(Jul), No. 3, 305-311.—The endeavor of American government to maintain her empire is irreconcilable with continuation of legitimacy. The state can no longer respond adequately to the demands of the disadvantaged. The state forces social controls that are antidemocratic. Organizational forms are kept alive which hinder the political system to give expression to cultural changes that are happening in society. The impression is that those who refuse military service and the Black Panthers are the authentic avant-garde of a new social and political order. The government may respond with repressive measures and also mobilize the population for maintaining order at the cost of freedom. The new characterological and cultural developments, however, suggest a new social system in which militarism, racism, nationalism, and imperialism become illegitimate and in which dignity and conscience of the individual and collective participation in decisions form the basis for legitimate authority. (17 ref.)—M. J. Stanford.

10701. Gross, Feliks. **Bonagente: Value structure and social change.** *Revue Internationale de Sociologie*,

1970(Dec), Vol. 6(1-3), 85-120.—Based on field research in 1957-1958, interviews were conducted on collective value goals in an Italian village community. Cultural-ecological, socioeconomic, and political social structures of the community are described. 6 shared core values were identified: work, political freedom and freedom of movement, order in public affairs, justice, equalitarian economic practices, and dignity and respect. It is suggested that these core values are most salient in periods of active social change.—C. Mayo.

10702. Hoffmann, Michel. **Vers une typologie des attitudes et des aspirations des jeunes africains face à la modernisation.** [Toward a typology of attitudes and aspirations of young Africans who are faced with modernization.] *Revue Internationale de Sociologie*, 1970(Dec), Vol. 6(1-3), 147-159.—Interview data collected in 1968 from 1,000 15-30 yr. old young Africans were organized into a typology of attitudes toward modernization. Questions dealt with current social changes, transitional difficulties, traditional customs, and the modern nation. Based on descriptions of a "successful acquaintance," 3 types emerged: those with no such model (predominantly illiterate, rural, and female), those with an agrarian village model (27%), and those with a modernized success model (43%). Within these types, subgroups were distinguished according to life satisfaction or discontent.—C. Mayo.

10703. Matejko, Aleksander. **Task versus status: The contradiction of modernization.** *Revue Internationale de Sociologie*, 1970(Dec), Vol. 6(1-3), 329-354.—Based on social systems theory, equilibrium between task and status orientations is described as critical to social change. Elitist and egalitarian models are presented for both task and status orientations, e.g., American capitalist democracy is described as a combined model, task-oriented elitist and status-oriented egalitarian. Modernization is furthered by a task orientation bolstered by the development of education and mass media and retarded by a rigid status orientation. The model is applied to underdeveloped nations including Ethiopia, China, Africa, and Cuba.—C. Mayo.

10704. Nahrendorf, Richard O. **Social change and violence.** *Revue Internationale de Sociologie*, 1970(Dec), Vol. 6(1-3), 355-390. Defines violence as the abuse of strength in an attack on that which is protected by social control, and analyzes law from philosophical, ethnological, and psychological perspectives. Individual and group violence are distinguished from group protest for social change. Based on a review of current civil strife in the United States, the causal relation of violence to social change is questioned. (33 ref.)—C. Mayo.

SEXUAL BEHAVIOR

10705. Irving, Lewis H. (U. Oklahoma) **A study of environmental factors of the unmarried mother in Oklahoma.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6722.

10706. Touhey, John C. (U. Nevada) **Birth order and virginity.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 894.—Examined the relationship between ordinal birth position and sexual experience in 78 male and 96 female unmarried undergraduates. 1st-born females were more likely than later-born females to report an incidence of premarital intercourse ($p < .01$). For males the relationship between birth order and incidence of intercourse was also positive ($p < .05$), but attained a

reduced level of confidence. Findings suggest a more rapid assumption of adult rights and privileges by 1st-born Ss.—Author abstract.

10707. Wolf, Arthur P. (Stanford U.) **Childhood association and sexual attraction: A further test of the Westermarck hypothesis.** *American Anthropologist*, 1970(Jun), Vol. 72(3), 503-515.—Studied E. Westermarck's contention that intimate childhood association promotes sexual aversion. A preliminary study of household registration records from Taiwan covering the period of 1900-1925 and information from informants support Westermarck's conclusion. Women who were forced to marry a childhood associate (a) bore fewer children, (b) were more likely to leave or divorce their husbands, and (c) were more likely to commit adultery. Evidence suggests that the incest taboo does not prohibit what men's feelings incline them to do, but is instead an expression of these feelings, socially unnecessary but psychologically inevitable.—Journal abstract.

Birth Control & Abortion

10708. Keller, Alan B., Sims, John H., Henry, William E., & Crawford, Thomas J. (Cornell U., International Population Center) **Psychological sources of "resistance" to family planning.** *Merrill-Palmer Quarterly*, 1970(Jul), Vol. 16(3), 286-302.—Using 10 Negro couples identified as "users" of contraceptives effectively in the past 2 yr. and 10 Negro couples identified as "nonusers" who continued to have or risk having children (beyond 3), the groups were matched on other variables, several psychological assessment instruments and interviews were used to measure the following variables: (a) feelings of efficacy, (b) relative need for autonomy vs. need for dependency, (c) need for achievement, (d) tendency to plan ahead, (e) need for emotional contact with others, (f) perceptions of others' perception of self, (g) feelings about sex identity, (h) perceptions of the opposite sex, (i) perceptions of children, and (j) degree of impulse control. The results were statistically analyzed by the Fisher exact probability and the chi-square tests. Multiple factors seem to bear on contraceptive behavior. Most "nonusers" seemed to manifest most of the traits thought conducive to small families. The differences in contraceptive behavior between "nonusers" and "users" appeared to be the result of differing psychological patterns each composed of many traits. It would also appear that feelings about sex identity, feelings of efficacy, and the quality of relationships with others, including the spouse, may override other factors in determining contraceptive behavior; and that in the absence of strong pressure for low fertility from the male, the psychological make-up of the female is more crucial in determining contraceptive behavior. R. V. Hamilton.

10709. Ohadike, Patrick O. **Normative and attitudinal transformation in family size values and birth control in a modernizing African community.** *Revue Internationale de Sociologie*, 1970(Dec), Vol. 6(1-3), 391-410.—Among 596 Nigerian married women interviewed in 1964, the younger, better educated, and better housed expressed less desire for large families although even this group desired an average of 5 children. Reported use of birth control methods was low (9% of sample) but support for family planning clinics was high (from 100% for college educated to 35% for uneducated). These findings are interpreted in terms of

cultural transitions accelerated by socioeconomic changes. (19 ref.)—C. Mayo.

ATTITUDES & OPINIONS

10710. Alker, Henry A. (Cornell U.) **A quasi-paranoid feature of students' extreme attitudes against colonialism.** *Behavioral Science*, 1971(May), Vol. 16(3), 218-227. Tested 3 alternative explanations concerning an apparent paranoid quality of extreme political attitudes: (a) such attitudes reflect exceptional, if embarrassing, perceptiveness by their proponents; (b) such attitudes reflect a cognitive style similar to that of paranoids without any attendant defensiveness; and (c) such attitudes represent paranoid defensiveness. Results with a selected total sample of 96 "left," "middle," and "right" undergraduates support only the 3rd hypothesis. Findings suggest that paranoid-like functioning was most prevalent in those on the extreme left. Paranoid defensiveness was indicated through an interaction with manipulated suspicion-arousal during assessment. Restrictions concerning the generalities of these results are discussed. (29 ref.)—*Journal abstract*.

10711. Calder, Bobby J. (U. North Carolina, Chapel Hill) **The effects of cognitive constraints on attitudes.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6922.

10712. Harsanyi, Suzanne. (Gaylord Rehabilitation Hosp., Wallingford, Conn.) **Social attitudes regarding aging as a disability.** *Journal of Rehabilitation*, 1970(Nov), Vol. 36(6), 24-27.—Provides a broad-scale picture of societal views on the elderly citizen and his real and potential impairment. (24 ref.)—M. A. Seidenfeld.

10713. Hogan, Robert & Dickstein, Ellen. (Johns Hopkins U., Center for Social Organization of Schools) **A dimension of maturity: Moral judgement.** *Center for Social Organization of Schools Report*, Johns Hopkins U., 1971(Mar), No. 96, 21 p.—Presents (a) a definition of values, (b) a measure of moral values which seems to have adequate conceptual and psychometric properties, and (d) evidence concerning the personological correlates of mature moral judgment. Values were defined as the standards used in moral evaluations and the criteria for choosing rules of conduct. Using a brief, semi-projective task, moral judgments were elicited from 92 male undergraduates which could be reliably ($r = .88$) scored for maturity of moral judgment. Data indicate that Ss whose moral judgments were rated as mature tended to be sensitive to injustice, well-socialized, empathic, autonomous, and based their judgments on intuitive notions of "goodness." (36 ref.)—*Journal abstract*.

10714. Hynam, Charles A. **The influence of superstition, religion and science upon anomie in a modern Western setting.** *Revue Internationale de Sociologie*, 1970(Dec), Vol. 6(13), 190-215.—Based on normative socialization theory, it was predicted that anomic individuals (as identified by a modified Srole scale) who rejected institutionalized religious and scientific beliefs would be more superstitious (assessed by the author's 30-item superstition scale). Questionnaire data from 778 American males (509 undergraduates and 229 doctoral candidates) supported the predictions. Superstition was positively related to anomie; religiousness and scientific training were negatively related. (28 ref.)—C. Mayo.

10715. Jones, James M. (U. Northern Iowa) **Attitudinal valence and semantic differential potency**

scales. *Psychological Reports*, 1971(Jun), Vol. 28(3), 991-994.—Presented 2 issues to 185 undergraduates for rating on 16 semantic differential potency scales. Ss were classified for or against the issues on the basis of their responses to 2 unmarked 9-cm lines descriptively labeled at the end points. Semantic differential data from the 4 resulting classes were factor analyzed using principal components solutions with varimax rotations. Previous research suggested that these scales might fractionate into several components of variance and that the structure would vary depending on attitudinal valence. Descriptive comparisons and comparisons employing Tucker's coefficient of congruence support the hypothesis of dissimilar fractionation.—*Journal abstract*.

10716. Lester, David. (Suicide Prevention & Crisis Service, Buffalo, N.Y.) **Sex differences in attitudes toward death: A replication.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 754.—Replicated a 1936 study by W. Middleton (see PA, Vol. 11:1549) on sex differences in the attitudes toward death held by students. In a study of 175 male and 236 female undergraduates, it was found that male students were more likely to think about death than females, but had a less negative emotional reaction to death. Differences in the present study were less than those previously reported.—*Author abstract*.

10717. Peay, Edmund R. (U. Michigan) **Extensions of clusterability to quantitative data with an application to the cognition of political attitudes.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6718.

10718. Pheterson, Gail I., Kiesler, Sara B., & Goldberg, Philip A. (U. California, Riverside) **Evaluation of the performance of women as a function of their sex, achievement, and personal history.** *Journal of Personality & Social Psychology*, 1971(Jul), Vol. 19(1), 114-118.—Studied the conditions under which women are prejudiced against women. 120 female undergraduates evaluated 8 paintings in a $2 \times 2 \times 2$ design varying (a) sex of painter, (b) status of the painting, and (c) personal odds faced by the artist. Results indicate that Ss judged the entry paintings by men to be significantly better than identical paintings by women. Winning paintings were not evaluated differently by sex. Obstacles faced by winners or entrants had no effect on judgments. It is concluded that women who are attempting to accomplish are judged less favorably than men, but that women who have successfully accomplished are evaluated as favorably as men.—*Journal abstract*.

10719. Reich, Carol L. (U. Michigan) **The generalization of belief throughout a cognitive network.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6719.

10720. Roll, Samuel & Verinis, J. S. (U. New Mexico) **Stereotypes of scalp and facial hair as measured by the semantic differential.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 975-980.—Presented 36 male and 44 female undergraduates with a series of 15 stimuli which were designed to represent the variables of hair color, hair length, quantity of scalp hair, hair quality, and amount of facial hair. Each stimulus was rated on scales representing the Evaluative, Potency, and Activity dimensions. The proposition that stereotypes are identifiable was strongly confirmed. Of 18 specific predictions 15 were confirmed. Explanation in full of these findings is not effected.—*Journal abstract*.

10721. **Sutton, A. J.** (Macquarie U., North Ryde, New South Wales, Australia) **The use of quadratic discriminant analysis for the measurement of profile distance in social perception.** *British Journal of Psychology*, 1971(May), Vol. 62(2), 253-260.—Reports that in many studies, the similarity between semantic differential profiles in relation to external criteria (e.g., social background) has been examined using a generalized distance index (C. E. Osgood) which assumes a particular kind of interaction between the profiles. In a study with 291 1st-yr technological college students it was demonstrated that several kinds of interaction between profiles can be obtained and described using quadratic discriminant analysis. Ss rated 12 role concepts in each of 35 bipolar 7-point adjective scales and provided information on their social and cultural backgrounds and on certain educational and occupational attitudes. Results are reported of quadratic discriminant analysis. Problems of interpretation are discussed.—*Journal abstract.*

10722. **Vavrik, Julie & Jurich, Anthony P.** (Tyrone Area School District, Pa.) **Self-concept and attitude toward acceptance of females: A note.** *Family Coordinator*, 1971(Apr), Vol. 20(2), 151-152.—The TAT was administered to 59 male upper-class and graduate students. The TAT was scored for self-concept and attitude toward wife-character. There were 3 ways in which the male could view the females in his life: (a) female is a person, (b) stereotypes female somewhat, and (c) female is a sex object. A high relationship was found between self-acceptance and acceptance of others. These findings supported earlier research, and showed that low self-esteem was highly correlated with a specific area of acceptance of others, the treatment of women as sex objects. These findings can be used by educators or counselors as an indicator: if 1 factor is present, the other factor may need attention.—*M. W. Linn.*

10723. **Wade, Kenneth & Wilson, Warner.** (U. Alabama) **Relatively low prejudice in a racially isolated group.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 871-877.—Compared the social distance scores of 84 rural high school students attending all-white high schools in an all-white section of Alabama with the scores of 214 students attending an integrated school in a small city. Ss from the all-white schools expressed more favorable attitudes toward blacks ($p < .001$). Although it was not possible to arrange a retest at the integrated school, a retest of 91 Ss at the all-white schools about 6 mo. later showed that attitudes at these schools had improved significantly ($p < .001$). Methodological weaknesses of the study are noted. (27 ref.)—*Journal abstract.*

10724. **Westler, Loretta & Chansky, Norman M.** (Temple U.) **Social desirability of the "Runner Studies of Attitude Patterns."** *Psychological Reports*, 1971(Jun), Vol. 28(3), 930.—Obtained ratings of the social desirability (SD) of 102 statements in the Runner Studies of Attitude Patterns from 119 female and 135 male entering college freshmen and item endorsements from 359 male and 444 female entering freshmen. Results reveal sex differences in both ratings and item endorsement. Findings indicate that most items were considered neutral with respect to SD. However, correlations between item endorsement and their social desirability values ranged from .29 for females to .49 for males.—*Author abstract.*

Formation & Change

10726. **Cowan, Gloria & Komorita, S. S.** (Wayne State U.) **The effects of forewarning and pretesting on attitude change.** *Educational & Psychological Measurement*, 1971(Sum), Vol. 31(2), 431-439.—75 undergraduates were asked to read an article on advertising. $\frac{1}{2}$ of the Ss had been pretested 2 wk. earlier on the advertising issue. Prior to reading the article, Ss had been told to evaluate the readability of the article and the author's viewpoint. After reading the article, $\frac{1}{2}$ of the Ss took an awareness measure, and 5 evaluative semantic differential scales. This order was reversed for the other group. Forewarning, pretesting, and their interaction contributed no statistically significant effect. Correlational analysis revealed correlations of different magnitude between awareness and testing depending on the order of presentation of these treatments. When posttest was administered first, correlations with awareness were close to 0; when awareness was first correlations with posttest were on the order of .6.—*N. M. Chansky.*

10736. Codol, Jean P. (Lab. of Social Psychology, Aix, France) **Influence de la représentation d'autrui sur l'activité des membres d'un groupe expérimental.** [Influence of the representation of another person on the activity of members of the experimental group.] *Année Psychologique*, 1970, Vol. 70(1), 131-150.—10 groups of 3 Ss each (2 "naive" and 1 confederate) were told, before the experiment, that the confederate was either cooperative or competitive. In 2 situations the confederate was neither during the task session. In 2, the confederate either confirmed or disconfirmed the naive Ss' representation of his personality. Results indicate that the naive Ss' expectations concerning the behavior of the confederate determined their behavior during the task as well as their representation of the elements of the situation (task, group, other members). Where the confederate was seen as cooperative, Ss saw the task as a cooperative task and the group as a cooperative group.—G. Rubin-Rabson.

10748. Geisler, John & Gillingham, William. (Central Michigan U.) **The effects of a personal growth group experience.** *National Catholic Guidance Conference Journal*, 1971(Spr), Vol. 15(3), 183-186.—Ss were 81 graduate and undergraduate students. The group experience covered 16 sessions. Conclusions on outcomes were drawn from results of a 5-item course Evaluation Questionnaire, and a 70-item Q-sort used as pre- and posttest on personal adjustment. According to these measures, adjustment score improved significantly as a result of the personal growth experience. Recommendations include control groups and longitudinal research to assess permanence of personal growth.—A. M. Cawley.

10749. Giere, Walter. **Gruppendynamik: Ein Spiel ohne Folgen: Notizen und Anmerkungen zu einem Seminar.** [Group dynamics: A play without consequences: Notes and observations on a seminar.] *Gruppendynamik*, 1970(Jul), No. 3, 282-304.—Attempts to give, on basis of notes, a picture of the group dynamic processes of a seminar and to present their analysis. A description of 13 days' happenings is given without identifying the seminars. The seminars lacked task orientation and were geared towards here-and-now situations referring to personal problems of the individuals and of the group. Gains made by individuals may also be applied at working situations. These personal experiences may be transferred to the sociopolitical

sphere only by chance and not by design. Positive relationships to others were established, although only superficially. Insights into self and judgment of others are enhanced but in the long run may be threatened because of their occurrence in an isolated atmosphere. Increased ability to perceive others is blunted because of the trainers' insistence on creating harmony in the group.—*M. J. Stanford.*

10754. Klein, Edward B., Thomas, Claudewell S., & Bellis, Elizabeth C. (Yale U.) **When warring groups meet: The use of a group approach in police-black community relations.** *Social Psychiatry*, 1971(May), Vol. 6(2), 93-99.—Describes a sensitivity exercise, with a combined Tavistock and T group approach, led by mental health professionals for black city residents and the local police force. Many of the usual group dynamics were observed, including greater understanding of each other by most participants and the lessening of stereotypes. But powerful and militant factions in and out of the exercise used it to confirm a much-wanted temporary cease-fire rather than to bring about an end to their "war." The theoretical-derived focus on boundary maintenance proved impossible to sustain in the group exercise, which could not be walled-off from the reality of a socially explosive local situation. This reality negated the attempt to bring about peaceful change, the unspoken agenda of the professionals and most of the others involved in the program. The exercise demonstrated again the need for a firm contract and for mental health professionals to be clear about their roles and motives when they serve as consultants in social conflict situations. 10756. Levine, Ned. (Brunel U., London, England) **Emotional factors in group development.** *Human Relations*, 1971(Feb), Vol. 24(1), 65-89.—Evaluated training groups by questionnaire methods to test Bion's basic assumptions about emotional factors in group process. Results are contradictory to the basic assumptions theory. The polar opposites—fight-flight and intimacy-detachment changed in opposite directions rather than together as predicted. Conflict in a group is not over emotions, but rather one of intellectual issues. Factor analysis of phase indices reveals the following dimensions: involvement-withdrawal (negative emotions

shifting over time to positive), seeking authority (high at beginning and end of group), fight-antagonism toward authority (increases but tapers toward the end), and looking to members for support (decreasing parabolic curve). Relations of these findings to a general model of small group changes are discussed. (36 ref.)—*W. W. Meissner.*

10758. Martin, Roger D. (U. Saskatchewan, Saskatoon, Canada) **Videotape self-confrontation in human relations training.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 341-347.—Presented informational feedback, in the form of videotape self-confrontation, to the members of 3 separate but essentially equivalent T groups. 21 Ss were matched according to age, sex, and education. 3 male doctoral students served as trainers. Dependent variables were (a) group variance in length, and (b) frequency of individual verbal output. Maximum experimental control was achieved through the use of a time-series design, with each group serving as its own control. Changes in level and slope of the series were predicted contingent on videotape replay of past interaction to the groups. Results indicate that the effects of videotape feedback are not necessarily predictable, and may cause either beneficial or detrimental group behavior change. Videotape feedback also seems to have markedly different effects on different groups. Conclusions are presented regarding the appropriateness of time-series research designs with unique social phenomena, e.g., T groups. (16 ref.)—*Journal abstract.*

10763. Prince, George. (Synectics, Inc., Cambridge, Mass.) **Leadership for creativity and synectics meetings.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 125-137.—The problem of leadership usually is a result of a lack of rapport between the leader and the group. The responses of the members of the group to the leader are colored by various motives, possibly ranging from blind followership to unjustified hostility. Several leadership techniques are mentioned as possible means to reduce the barrier between the leader and the group. Such techniques include rotation of leadership, the use of a spectrum policy by which "every idea, however absurd or tangential, has something of value in it," not

permitting any member of the group to be put on the defensive, and giving the ideas of all the members precedence over those of the leader. A synectics meeting consists of 5-7 persons, 1 of whom is the expert in the problem area and 1 of whom is the leader. 3 major phases of such a meeting are: defining the problem, reaching an unusual perspective, and deriving a creative solution.—A. J. Ter Keurst.

10766. Rubin, Irwin; Kolb, David; McIntyre, James, & Farris, George. (Massachusetts Inst. of Technology) **The process of joining up individuals and organizations.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 54-65.—From the viewpoint of an organization, the induction of a person into its ranks is usually not on an egalitarian or one-for-one basis but rather on how well the person "fits" into the pattern of the group. Conversely, the person constructs a "psychological contract" in his projected relations with the organization. This "contract" largely conditions the behavior of the S in his further relationships with the organization. Examples of the reconstruction of this "contract" by means of more "open" communications between the person and the organization are presented, such as the orientation sessions for the applicants for the Peace Corps and for freshmen undergraduates.—A. J. Ter Keurst.

10767. Sales, Esther G. (U. Michigan) **Sex differences in responsiveness to two classes of social approval stimuli.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6719-6720.

10770. Sinha, Jai B. & Pandey, J. (A.N.S. Inst. of Social Studies, Patna, India) **Strategies of high n-Ach persons.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Dec), Vol. 13(4), 210-216.—Examined 2 hypotheses: (a) that high need for Achievement Ss perform better and create more resources, and (b) that altruistic need for Achievement Ss hoard less, use resources considerably, and help weaker partners more. 90 undergraduates were divided into 30 3-person groups. The task consisted of a cube construction test. A postexperimental questionnaire contained items providing measures of success of the "manipulations." The data confirm the theory that high need for Achievement Ss have greater propensity to create resources.—R. D. Nance.

10771. Smallegan, Marian. (U. North Carolina, Chapel Hill) **A comparison of two training formats for persons with varying interpersonal needs.** *Adult Education*, 1971(Spring), Vol. 21(3), 166-176.—Used 2 training formats in a group and interpersonal relations seminar to study opinion change in democratic lead-

ership. The training formats differed in their residential nature: (a) weekly, nonresidential meetings for 1 semester; and (b) the same number of meeting hours with a residential weekend for part of the seminar. Each of 108 participants responded to a pre-, posttest for opinion about democratic leadership, and to FIRO-B, a questionnaire used to determine interpersonal need. Findings indicate (a) a positive opinion change over a period of time after the course was completed, (b) little difference in opinion change for high scorers on FIRO-B regardless of format, (c) a positive opinion change for low scorers on FIRO-B who were in the partial residential sections, and (d) a negative opinion change for low scorers on FIRO-B who were in the nonresidential section.—*Journal abstract*.

10772. Thomas, M. Duane. (U. Kansas) **Developing human potential through group interaction: A study of changes in personality factors, personal attitudes, and group functioning in university students participating in human relations training.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6884.

10773. Trotter, James P. (Wisconsin State U., River Falls) **Process comparison of encounter groups and discussion groups using videotape excerpts.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 358-361.—Analyzed videotaped excerpts from 3 encounter groups and 3 discussion groups to determine if significant process differences existed between the 2 types of groups on the basis of facilitative conditions observed. 90 undergraduate volunteers served as Ss. A panel of experts rated these excerpts using the Truax scales of Accurate Empathy, Unconditional Positive Regard, Depth of Self-Exploration, and Kiser's Congruence scale. Results of a 4-factor analysis of variance indicate significant differences between the groups on the Accurate Empathy, Unconditional Positive Regard, and Depth of Self-Exploration scales. Rater reliability was moderately high to high on all scales used. Results indicate that the encounter group process is characterized by facilitative conditions and can be distinguished as a therapeutic process as such.—*Journal abstract*.

10774. Vinokur, Amiram. (U. Michigan) **Effects of group processes upon individual and group decisions involving risk.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6721-6722.

10775. Wabba, Mahmoud A. (Baruch Coll., City U. New York) **Effects of game structure, range of pay-off and strategy of the other on cooperation in mixed-motive games.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 683-689.—Conducted 2 experiments with 32 male undergraduates each to determine the effects of (a) game structure, (b) range of pay-off, and (c) strategy of the other on the frequency of cooperative responses in 2 x 2 mixed-motive games. Analysis showed significant effects for game structure, strategy of the other, and all the 2-way interaction effects ($p = .001$) but no significant effect for range of pay-off. The frequency of cooperative responses was higher in the Chicken Dilemma game (CDG) than in the Prisoner's Dilemma game (PDG). In the PDG, defective and cooperative strategy generated defection. In the CDG, defective strategy generated cooperation while cooperative strategy generated defection.—*Journal abstract*.

Influence & Communication

10777. Edelman, J. David & Warner, Malcolm. (Syracuse U.) **Voting and allied systems in group decision-making: Their relationship to innovation, competition and conflict resolution.** *Human Relations*, 1971(Apr), Vol. 24(2), 179-188.—Discusses the effects of "democratic" voting systems on various outcomes. Objectives of the decision-making group can hopefully be matched with suitable systems of choice. Democratic decision processes are not clearly optimal for the outcomes studied—innovation, competition, and conflict resolution. The merits of formal systems and informal nonsystems need further evaluation, as well as whether voting and allied systems for estimating consensus can achieve the desired results.—*W. W. Meissner*.

10778. Hakmiller, Karl L. (U. Connecticut) **Inter-subject communication.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 956-958.—Interviewed a random sample of 55 ex-Ss 3 days following participation in a deception experiment. While a very large percentage recalled that they had been asked not to discuss the experiment with others or the reasons for that request, 30% of the sample reported providing a partial or complete description of the experiment to other students when requested to do so.—*Journal abstract*.

10779. Harris, Sandra L. (Rutgers State U., Douglass Coll.) **Influence of the interviewer: A note for the nonresearcher.** *Family Coordinator*, 1971(Apr), Vol. 20(2), 149-150.—Emphasizes the effects that an interviewer may have on the interviewee. Interpersonal variables such as sex, age, and race have been shown to influence research, interviewing, school, and therapy interactions. The practitioner, be he counselor, family therapist, teacher, or community worker, should be aware of this influence, both in his own work with people and in his evaluation of research by others.—*M. W. Linn*.

10780. Korte, Charles. (Vassar Coll.) **Effects of individual responsibility and group communication on help-giving in an emergency.** *Human Relations*, 1971(Apr), Vol. 24(2), 149-159.—Studied 60 students in a simulated help-giving emergency situation under conditions created by varying levels of responsibility (focused vs. diffuse) and levels of communication (no communication, minimizing communication, and true communication). Likelihood of giving help was greater under conditions of focused responsibility, but the greatest intervention occurred in the absence of any feedback. It is concluded that variations in feedback acted to define responsibility, i.e., created variations in the S's expectation that someone else would respond to the need for assistance. Without any feedback, the S had the least basis for assuming that others would render assistance. "It appears that the decision to offer assistance to some distressed person is not necessarily a first response to an emergency, but that emergencies may often produce Good Samaritans only by default. Persons will help out in a crisis, but most reliably when it seems apparent that other available sources of help are not forthcoming."—*W. W. Meissner*.

10781. Miller, Gary M. (Eastern Michigan U.) **A study of attitude change via sensitivity training groups.** *Journal of the Student Personnel Association for Teacher Education*, 1970, Vol. 9(2), 47-50.—Attempted to determine the effect of 4 different sensitivity training group designs upon the attitudinal changes of partic-

ipants in the specific training groups. The 25 men and 22 women participating were randomly assigned to 1 of the 4 groups: intensive sensitivity training, extensive sensitivity training, extensive-intensive sensitivity training, or control sensitivity training. Attitude change was measured by pre- and posttest designs using 15 adjective pairs to measure 8 concepts. Both factor analysis and t test were used. Only 3 of the 8 t values computed for the concepts on the semantic differential were significant. These were sensitivity training, being praised, and as I am. This evidence only partially supports the hypothesis that sensitivity training will influence attitude change as measured by the semantic differential.—*S. M. Amatori*.

10782. Misumi, Jyujii; Seki, Fumiyasu, & Shinohara, Hirofumi. (Kyushu U., Fukuoka, Japan) **An attempt to construct rating scales for the PM functions in discussion groups.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Dec), Vol. 13(4), 163-180.—Attempted to construct a set of scales for rating the performance (P) and group maintenance (M) dimensions in group discussion. In Exp. I, Ss were 54 rubber products foremen in an inservice training program. Exp. II applied the procedures used in Exp. I to 78 employees of another firm. Exp. III (N = 16 Ss) was primarily for the purpose of revising the items of the M scales. Exp. IV (N = 14 Ss), unlike the 1st 3 experiments, involved a group without a definite goal. It is concluded that the rating scales used were effective in measuring the 2 dimensions in question. (22 ref.)—*R. D. Nance*.

10783. Pastuvic, Nikola. (Workers U. "Moša Pijade," Zagreb, Yugoslavia) **Pokušaj mjerenja stupnja utjecaja članova organizacije u radu organa upravljanja poduzeća.** [A procedure for quantifying individual influence on managerial policy.] *Revija za Psihologiju*, 1970, Vol. 1(2), 79-85.—Proposes a procedure for quantification of the degree of an individual's influence in the work of a decision-making group. Metric characteristics of the procedure and validations (against the actual influence as criterion) are claimed to be satisfactory to warrant its use in research. (English abstract)—*A. Fulgosi*.

10784. Uhes, Michael J. (U. Hawaii, Center for Cross-Cultural Training & Research, Hilo) **Expression of hostility as a function of an encounter group experience.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 733-734.—Hypothesized that Ss undergoing an encounter group experience would show a decrease in covert expression of hostility and a corresponding increase in overt expression of hostility as measured by Bendig's Covert Hostility and Overt Hostility scales. 11 male and 13 female undergraduates participated in 10 encounter group exercises while a control group of 24 Ss matched for age, sex, and educational background, did not undergo the exercises. No significant difference was found between experimental and control groups' scores on the Bendig scales prior to, or upon completion of the series of encounter exercises for personal growth.—*Journal abstract*.

Social Perception & Motivation

10785. Barocas, Harvey. **The effects of defensive styles (repression-sensitization) on the perception and communication of vocal affect.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6888.

10786. Brown, Bert R. (Cornell U.) **Saving face.**

Psychology Today, 1971(May), Vol. 4(12), 55-59, 86.—A bargaining game and embarrassing performance situations were used in several experiments to study face-saving behavior. Exp. I showed that Ss were willing to endure high personal costs in order to retaliate against a stooge who had humiliated the S. In Exp. II, male Ss were unwilling to suck pacifiers even when offered a monetary reward. In Exp. III, Ss were asked to sing before various panels of judges. In general, face-saving was heightened when (a) an audience was present and gave derogatory feedback, (b) S felt incompetent, (c) the cost of retaliation could be kept private, and (d) when Ss performed before friends.—*E. J. Posavac.*

10787. Camenietzki, Schalom. (U. Kansas) **An experimental comparison of the effects of bodily contact and verbal interaction on the accuracy of interpersonal perception.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6891-6892.

10788. Forbes, Gordon B., Te Vault, R. Kent, & Gromoll, Henry F. (Millikin U.) **Willingness to help strangers as a function of liberal, conservative or Catholic church membership: A field study with the lost-letter technique.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 947-949.—Used the lost-letter technique to determine differences among members of 10 liberal, 10 conservative, and 10 Catholic churches in their willingness to help strangers. Results suggest that members of conservative churches are as willing to help strangers as are members of liberal or Catholic churches, but they are far less willing to make trivial financial sacrifices to do so.—*Journal abstract.*

10789. Fox, Mary M. (Duke U.) **Internal-external control and perceived ability as factors in the attribution of intent.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6873-6874.

10790. Harshbarger, Dwight. (U. West Virginia) **An investigation of a structural model of a small group problem solving.** *Human Relations*, 1971(Feb), Vol. 24(1), 43-63.—Studied problem solving in small groups under varying conditions of interaction and centrality. Measures of group process, time, and number of information transactions reflect the congruence of decision and interaction structures and support a structural congruence model. Problem-solving accuracy, effectiveness, and satisfaction do not support such a model. Present findings support a decentralized decision structure as providing the greatest problem-solving accuracy. Ss perceive problem-solving effectiveness to be greater in centralized structures, but these groups are less effective than groups with decentralized decision structures. A decentralized structure was found to be more satisfying. (19 ref.)—*W. W. Meissner.*

10791. Jackson, Lee A. & Mascaro, Guillermo F. (U. Florida) **Interpersonal attraction as a function of attitude similarity-dissimilarity and desire for certainty.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 856-858.—Hypothesized that persons having a high desire for certainty would be more attracted to those who agreed and less to those who disagreed than Ss exhibiting a lower need for certainty. 108 male and female undergraduates completed the Florida Political Beliefs Scale, Brim's Desire for Certainty Scale, rating scales for political beliefs reflecting varying degrees of agreement with the S, and Byrne's Interpersonal Judgment Scale. A significant main effect for attitude similarity on attraction was found. The interaction with need for certainty was not significant. It is suggested that the effect of

attitude similarity may be so powerful that individual differences among Ss may not produce any variation in attraction.—*Journal abstract.*

10792. Moore, Robert E. **How to win the image game everyone is playing.** Jericho, N.Y.: Exposition Press, 1970. 188 p. \$5.—Discusses the image factor in human relations and tells how, where, and when the image game is played. Chapters discussing how a person's image affects his relations with others and how psychological forces can establish a better image are included.

10794. Pellegrini, Robert J. (San Jose State Coll.) **Some effects of seating position on social perception.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 887-893.—Investigated the hypothesis of R. Sommer (see PA, Vol. 41:4517) that status and/or dominance may be ascribed to an individual automatically as a function of the location he occupies. 40 male and 40 female undergraduates made semantic-differential scale ratings of target individuals photographed while seated at a rectangular table. As predicted, occupancy of the head position (as opposed to side locations) was associated with higher ratings on all 6 of the following scales: (a) talkativeness, (b) persuasiveness, (c) dominance, (d) leadership, (e) self-confidence, and (f) intelligence. The occupant of the head position was also chosen significantly more often as the one who "probably contributed the most" to the group's task performance. Results are interpreted to indicate a general "halo effect" reflecting cultural standards and traditions regarding the organization of social space.—*Journal abstract.*

10800. Schuck, Solomon Z., et al. (Monmouth Coll., N.J.) **Sex differences in aggressive behavior subsequent to listening to a radio broadcast of violence.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 931-936.—Assigned 20 male and 20 female undergraduates to be insulted or not insulted by a confederate and to listen to a violent or neutral news broadcast. Ss were then given an opportunity to shock the confederate under the guise of a learning experiment. Results indicate that male Ss gave significantly more shock than female Ss. Female Ss

who were insulted and then listened to a violent broadcast gave less shock than those who listened to the neutral broadcast. The reverse was true for noninsulted female Ss. Results are interpreted as indicating the inhibitory effect of violent cues under strong arousal and the facilitating effect of violent cues under weak arousal. (21 ref.)—*Journal abstract*.

10801. Uno, Yoshiyasu, et al. (Keio U., Tokyo, Japan) **Interpersonal expectancy effects among Japanese experimenters and subjects.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Sep), Vol. 13(2-3), 130-134.—A growing literature suggests that the E's research hypothesis may affect the S's responses during an experiment. Most of this evidence comes from the United States and Canada. The present study attempted to determine whether these expectancy effects would also occur in Japan. 11 Es conducted an experiment in perception. Ss were 88 freshman and sophomore undergraduates (1/2 male, 1/2 female). Ss were asked to rate 10 photographs as to degree of success the person pictured had been experiencing. 4 independent variables were employed. A puzzling result was the tendency for Es to obtain data opposite to that they had been led to expect.—*R. D. Nance*.

10802. Whiteside, Mary J. (U. Texas) **Evaluation of a successful rival: An experimental investigation of jealousy.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6963-6964.

10803. Wright, Jack M. & Worthy, Morgan. **Volunteering as group spokesman as a function of task effectiveness, leader success, and task similarity.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 911-917.—Studied the frequency of adopting the job of spokesman for one's group as a function of (a) effectiveness of performance on a previous task, (b) success in influencing the behavior of other group members, and (c) task similarity. Results for 64 male undergraduates indicate that persons are most willing to function as spokesmen for the group when they have been effective on an earlier task, especially when the earlier task was similar or when Ss had been unable to influence other group members' judgments on the previous task. It is suggested that some types of leadership attempts occur more readily on the basis of feeling of adequacy on the task than on feelings of acceptance as leader (i.e., successful influence).—*Journal abstract*.

10804. Zimmerman, Jay & Krauss, Herbert H. (U. Georgia) **Source and magnitude of censure in predictions of unethical behavior.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 727-732.—Investigated the relationship of the prediction of ethical risk taking and the severity and agency of censure—self, family, peer group, and society. Ss were 45 male and 45 female undergraduates who were given a 16-item ethical-risk questionnaire developed by S. Rettig and coworkers. A significant interaction between agency and magnitude of censure was noted. With high censure, societal censure reduced risk taking most effectively; however, with low censure self-censure was most effective in inhibiting risk taking.—*Journal abstract*.

COMMUNICATION

10805. Bortz, Jürgen. (Erlangen-Nürnberg U., Inst. for Economics & Social Psychology, W. Germany) **Möglichkeiten einer exakten Kennzeichnung der Sprechstimme.** [Possibilities of exact identification of

speaking voice.] *Diagnostica*, 1971, Vol. 17(1), 3-14.—In the past, much interest has been shown to the speaking voice as an expression of human behavior. Research has been aided by technological improvement of apparatus for voice recording and reproduction. Despite extensive literature, there is little agreement on the voice as a personality indicator, due to widely differing test results. While the voice may be readily identified according to physical-acoustical values, this does not provide satisfactory data for diagnostic evaluation. The experiment called for 13 male students of different academic pursuits to recite 3 texts, categorized as lightly humorous, factual-neutral, and heavily emotional. The 39 recordings were evaluated by 9 professional psychologists according to a 32-scale profile. The ultimate goal was to discover the correlation among the 9 evaluators. After extensive tabulations and factor analysis, it is concluded that voice identification can be achieved on the basis of (a) quality of expressiveness, (b) development of a theoretical voice norm, and (c) a flexibility index evaluating the range of expression. This points to practical and diagnostic application, i.e., correlation between voice dynamics and personality factors; total voice impression input may be added as personality factor.—*H. Malki*.

10806. Darnell, Donald K. (U. Colorado) **Toward a reconceptualization of communication.** *Journal of Communication*, 1971(Mar), Vol. 21(1), 5-16.—The study of communication, as it focuses on messages or on symbolic transmission, is often challenged for being narrow. It is suggested that the communication scholar must recognize the influences of man's changing contexts, man's interdependence with his environment, man's limited ability to control for error, interaction effects in communications, and the effects of choices of communication behaviors attributed to others. Thus, communication should be defined as a study of the ways by which men affect each other and the interactions of those systems of influence.—*Journal abstract*.

10807. Dirks, Donald D. & Bower, Deborah R. (U. California, Medical School, Los Angeles) **Masking effects of speech competing messages.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 229-245.—Performed 4 experiments with a total of 21 undergraduates to determine the effect of semantic content or meaning of a competing speech message on the identification of synthetic sentence material. When the competing message was reversed and reproduced in a backward mode to eliminate its semantic content or meaning, no important differences were found between the performance-intensity functions in the forward or backward mode. The presence of a plateau or notch in the slope of the performance-intensity functions were demonstrated for English or foreign language competing messages. This plateau effect occurred primarily when (a) the same speaker delivered both messages, (b) the relative intensity levels were equal, and (c) the temporal patterns were similar. The semantic content of the competing message did not contribute to the plateau. The plateau was primarily due to the similarity of the temporal patterns of the primary and competing messages which occurred when the intensities of both messages were equal.—*Journal abstract*.

10809. **Funkhouser, G. Ray & Maccoby, Nathan.** (Pennsylvania State U., Coll. of Human Development) **Communicating specialized science information to a lay audience.** *Journal of Communication*, 1971(Mar), Vol. 21(1), 58-71.—Reports the results of an empirical, quasi-experimental study on textual variables in science writing and their effects on a lay audience. Ss were 773 college students. Strong relationships were found between textual variables, such as readability and use of example, and audience variables, such as information gain and attitude favorability toward the topic (enzymology).—*Journal abstract.*

10810. **Gardiner, James C.** (Colorado State U.) **A synthesis of experimental studies of speech communication feedback.** *Journal of Communication*, 1971(Mar), Vol. 21(1), 17-35.—Presents a summary and synthesis of experimental studies dealing with communication feedback. 2 types of studies were selected for review: (a) those focusing on communication receiver response and its effect on the communication source, and (b) those involving verbal conditioning, small group interaction, psychology of success and failure, and task performance. (55 ref.) *Journal abstract.*

10811. **Geldard, Frank A.** (Princeton U.) **Body English.** *Psychology Today*, 1968(Dec), Vol. 2(7), 43-47.—The skin is a relatively good organ for the reception of communicative signals. It can detect very short breaks in a steady pressure, it can detect the difference in frequencies of impacts below 150 impacts/sec. it can detect degrees of pressure, and there are many skin locations possible for communication. A language has been developed which people have learned and which can be decoded faster than Morse code operators can work. It may be that the blind will be able to use their skin in order to "read."—*E. J. Posavac.*

10812. **King, Charles W. & Summers, John O.** (Purdue U., Krannert Graduate School) **Attitudes and media exposure.** *Journal of Advertising Research*, 1971(Feb), Vol. 11(1), 26-32.—"The data presented here suggest the potential value of using attitudinal profiles of media audiences. Substantial differences were demonstrated among the . . . profiles for 6 broad media classes" (demonstrably not primarily a function of educational levels).—*J. C. Franklin.*

10813. **McCroskey, James C. & Wright, David W.** (Illinois State U.) **A comparison of the effects of punishment-oriented and reward-oriented messages in persuasive communication.** *Journal of Communication*, 1971(Mar), Vol. 21(1), 83-93.—Examined the effects of reward-oriented (pleasure) and punishment-oriented (fear) appeals in conjunction with initial credibility on attitude change and terminal credibility. 228 undergraduates were exposed to either a reward-oriented or a punishment-oriented message by either high- or low-credible sources. Reward and punishment appeals did not differentially affect either attitude change or perceived credibility. Both types of appeals produced substantial attitude change when presented by a high-credible source; neither produced significant change when presented by a low-credible source.—*Journal abstract.*

10814. **McGuire, Michael T.** (Massachusetts General Hosp., Stanley Cobb Lab., Boston) **Dyadic communication, verbal behavior, thinking, and understanding: I. Background problems and theory.** *Journal of Nervous & Mental Disease*, 1971(Apr), Vol. 152(4),

223-241.—Examines the general underlying assumption that "quasipermanent cognitive structures" underlie cognitive and communicative behavior. Such structures are said to effect decoding, organization, retrieval, and encoding of information. Structures are differentiated into modes and models. Modes are "aggregates of behavior rules which guide 2-person conversation." For example, jocular conversation and problem-solving conversation are different modes. They are ways of processing information. Models are clusters of "rules for content interpretation." Hypotheses and assumptions relating to the formation, disconfirmation, and interactions of models with each other and with modes are presented. (49 ref.)—*R. Denis.*

10815. **McGuire, Michael T. & Stanley, Juliet.** (Massachusetts General Hosp., Stanley Cobb Lab., Boston) **Dyadic communication, verbal behavior, thinking, and understanding: II. Four studies.** *Journal of Nervous & Mental Disease*, 1971(Apr), Vol. 152(4), 242-259. Reports on 4 studies derived from the hypotheses presented in Part I of this series (see M. T. McGuire, PA, Vol. 46:Issue 6). In Study I "model" (content) was held constant while "mode" (form) was varied. As predicted, shift of mode affected S's perception of how well he was being understood, with shared modes and nonconflicting modes producing ratings of high understanding. Studies II and III tested that the number of modes elicited by the incoming information would affect S's ability to evade. In Study II a computer asked questions of the S. In Study III, a research assistant asked the same questions. Findings were similar: open-ended questions were least effectively evaded, and forced-choice questions were most effectively evaded. Study IV examined formation and consolidation of models. The data were too complex for simple interpretation but suggested that participants could judge model rules more accurately than Os, and that testing of the model decreased with use. —*R. Denis.*

10816. **Pareek, Udai & Singh, Y. P.** (National Inst. of Health Administration & Education, New Delhi, India) **Communication nets in the sequential adoption process.** *Indian Journal of Psychology*, 1969, Vol. 44(1-4), 33-55.—Discusses communication nets as found in 1 village at the different stages of the adoption of 3 improved agricultural practices. A new pattern of sequential adoption consisting of 7 stages—need, awareness, interest, deliberation, trial, evaluation, and adoption—was used. The new pattern had 2 additional stages—need and evaluation (after trial). The evaluation stage is redesignated as deliberation, since the person deliberates (mentally weighs the pros and cons of adoption), rather than evaluating (assessing the value of the practice on the basis of evidence collected). The study was conducted in a medium-size multicaste village. The total number of included families was 94. It was observed that except for the interest and trial stages communicators increased with each advanced stage of adoption. (19 ref.)—*B. Roy.*

10817. **Rimé, Bernard.** (U. Louvain, Lab. of Industrial Psychology & Professional Psychopathology, Belgium) **Communication et processus de groupe: I. Les éléments du processus de communication.** [Communication and group process: I. Elements of the communication process.] *Revue de Psychologie et des Sciences de l'Éducation*, 1971, Vol. 6(1), 85-104.—Used Shannon's analysis of a communication process as a paradigm for within-group communication, an essential

for the existence of a group. Discusses the psychological elements of such a communication system under the headings of (a) motivation to communicate, (b) factors entering into the elaboration of the desired message, (c) transmission and distortions, (d) the reception process (perception, interpretation, integration), and (e) verification and restoration. (15 ref.)—*S. S. Marzolf.*

10818. Roslansky, John D. **Communication: A discussion at the Nobel Conference organized by Gustavus Adolphus College, St. Peter, Minnesota, 1969.** Amsterdam, Netherlands: North-Holland, 1970. ix, 131 p. \$6.95.—Presents a collection of lectures on communication which were delivered by scholars from diverse disciplines on the occasion of the 5th Nobel Conference in 1969.

10819. Shipp, Thomas & Hollien, Harry. (Veterans Administration Hosp., San Francisco, Calif.) **Perception of the aging male voice.** *Journal of Speech & Hearing Research*, 1969(Dec), Vol. 12(4), 703-710.—Investigated the effects of physiological aging upon otherwise normal healthy male voices. Data are provided for 175 adult males equally divided into 7 age categories (decades) from 20-89 yr. of age. 95 undergraduates, using 1 of 3 related perceptual procedures, estimated the ages of recorded voice stimuli. Results demonstrate that age can be systematically identified from voice samples.—*Journal abstract.*

Language

10820. Barik, Henri C. (U. North Carolina) **Some findings on simultaneous interpretation.** *Proceedings of the Annual Convention of the American Psychological Association*, 1970, Vol. 5(Pt. 1), 11-12.—(This is a corrected version of the abstract which appeared in PA, Vol. 44:17939). Simultaneous interpretation is the process of orally converting a message from 1 language into another as the message is being received. Behaviorally, this represents a complex form of activity, seemingly involving very rapid decoding and encoding operations. There is very little experimental data on the issue, which is one of considerable interest in the field of speech perception and analysis. The present study was undertaken to fill this void. 3 categories of translators were tested: professional conference, student, and amateur interpreters. Results are given for temporal characteristics of translated speech, synchronization of patterns of delivery of speaker and translator, time lag between speaker and translator, and content analysis.—*Author abstract.*

10821. Borg, Gunnar & Hosman, Jan. (U. Stockholm) **The metric properties of adverbs.** *Reports from the Institute of Applied Psychology, U. Stockholm*, 1970, No. 7, 4 p.—Investigated the ratio properties of the following verbal expressions: very long, rather long, neither long nor short, rather short, very short. 24 male and 38 female undergraduates were presented with 30 scaling tasks in randomized order. It was demonstrated that the relations between pairs of these expressions was approximately invariant with change of experimental conditions. This supports the hypothesis that adverbial intensives serve as multipliers. Results suggest the possibility of erecting ratio scales by verbal scaling methods. (16 ref.)—*Journal abstract.*

10822. Bowen, John H. (State U. New York, Albany) **Frequency of occurrence and the likeableness of trait names.** *Psychological Reports*, 1971(Jun), Vol. 28(3),

945-946.—Examined the relationship between the Likeableness (L) scale values of adjectives, as obtained by N. Anderson (see PA, Vol. 42:13734), and the frequencies of occurrence and distributions of the adjectives. The distribution was skewed, with a median at approximately 5.7 words/million (wpm) and a range from 4 words/18 million through 100+ wpm. A large number of frequency points showed a very low word density. There was a low, significant correlation (.299) between frequency and L. Methodological implications of the findings are examined.—*Journal abstract.*

10823. Field, Marsie M. (U. Georgia) **The effect of syllabic division, consonant-vowel order, and deletion position on the reconstruction of abbreviated words.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6930-6931.

10826. Lehiste, Ilse. (Ohio State U.) **Suprasegmentals.** Cambridge, Mass.: Massachusetts Inst. of Technology Press, 1970. viii, 194 p. \$7.95.

10827. Loewenthal, Kate. (City U., London, England) **A study of imperfectly acquired vocabulary.** *British Journal of Psychology*, 1971(May), Vol. 62(2), 225-233.—Conducted 3 experiments with a total of 46 male and 22 female undergraduates to examine behavior with (a) words which could be used and defined by the Ss, (b) words which were simply familiar, and (c) unknown words. Known and familiar words were recognized equally readily after brief tachistoscopic presentations. Known words elicited semantically related responses, while familiar and unknown words usually elicited phonologically related or mediated responses. In a word-selection task, Ss chose the word most similar to the stimulus, from a set of 4 words which were semantically related, phonologically related, or phonologically mediated and unrelated. For familiar words a semantically related word was more likely to be recognized in the choice task than it was to be produced in the word-association task. The same was true to a lesser extent for unknown words. A simple scheme for word-processing is proposed to fit the findings, in which there are separate stores for the surface-structure (phonological/visual) features and dictionary entries of words.—*Journal abstract.*

10828. Olshavsky, Richard W. (Indiana U.) **Prediction of the meaningfulness level of nonsense syllables via computer simulation.** *Cognitive Psychology*, 1971(Apr), Vol. 2(2), 206-211.—Tested the extent to which the relative meaningfulness level of nonsense syllables can be predicted by the formalization of certain commonplace assumptions about the underlying basis of meaningfulness. A large number of syllables (1,015), presumed to be familiar to the typical S, was stored in the computer model's memory. For each CVC to be scaled, this memory was searched 1st for the CVC in its input form and then, if that failed, for 1 of several transformed forms of the CVC corresponding to each of several feasible phonemic representations (i.e., pronunciations). Moderately high correlations between predicted and observed values were obtained.—*Journal summary.*

10829. Whiting, Gordon C. (U. Wisconsin) **Code restrictedness and opportunities for change in developing countries.** *Journal of Communication*, 1971(Mar), Vol. 21(1), 36-57.—Certain observed similarities between the orientation of peasants in developing countries and of the poor in developed nations may be traced to restricted utilization of language in organizing experience and communicating with others. Deficient encoding and decoding abilities may lessen the chances for peasants and ghetto dwellers to respond to the opportunities that a changing environment presents. Utilization of language's potentials may be requisite to the perceptual flexibility and cognitive skill with hypotheticals; these in turn may be requisite to effective voluntary change. These considerations tie into basic theories about the workings of the mind. They hold the promise of facilitating research in communications in developing nations and in underdeveloped sectors of more advanced nations. (35 ref.)—P. J. Federman.

Psycholinguistics

10831. Jakubowicz, Celia. (U. Paris-Sorbonne, Lab. of Experimental & Comparative Psychology, France) **Recherches récentes en psycholinguistique.** [Recent investigations in psycholinguistics.] *Année Psychologique*, 1970, Vol. 70(1), 247-293.—Reviews investigations inspired by Chomsky's transformational theories of generative grammar: (a) several conditions which generative grammar attempts to satisfy, form of grammar relation between generative grammar and psychological experiments in language; and (b) investigation introducing external variables in the competence model, study of recursives and of deep structures, recall, interpretation, computers the grammaticality of phrases. During learning, the recall and perception of phrases, S plays an active role in which he puts to work the knowledge he has of the structure of his language. (90 ref.)—G. Rubin-Rabson.

10832. Lorber, Neil M. (Newark State Coll.) **Theoretical perspectives on psycholinguistics.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Sep), Vol. 13(2-3), 145-160.—Theoretical commentary on many basic mental operations has tended to receive relatively little emphasis. The present article attempts to explain psychological phenomena which have not in general been fully addressed by empirical research. To a pronounced degree, the dynamics of consciousness involve verbal operations. The greater one's functional vocabulary the more pronounced his ability to assimilate, organize, and evaluate incoming data. Insight represents an example of non-verbal thinking, the latter being relatively uncommon. Words are integrated into the schema of mind, and the individual loses sight of the fact that they are purely symbolic. The individual must organize and simplify his thoughts in order to communicate them.—R. D. Nance.

AESTHETICS

10833. Duncan, Elmer H. (Baylor U.) **Selective current bibliography for aesthetics and related fields, January 1, 1970-December 31, 1970.** *Journal of Aesthetics & Art Criticism*, 1971(Sum), Vol. 29(4),

577-614.—Includes a section devoted to references on psychology.—P. R. Farnsworth.

10834. Gardner, Howard. (Harvard U.) **The development of sensitivity to artistic styles.** *Journal of Aesthetics & Art Criticism*, 1971(Sum), Vol. 29(4), 515-527.—The Gibsons have assumed that "pattern recognition or discrimination learning is of a piece, with the task of classification remaining constant across varying contents." In this article the thesis is developed that "there may be different forms of sensitivity to style, which can be assessed by appropriate techniques." Thus, "ability to perceive and create distinctions in literature and music draws more heavily on rule and object sensitivity" while "sensitivity to the visual arts is more closely tied to the development of person sensitivity."—P. R. Farnsworth.

10835. Gorceix, Simone & Gorceix, Antoine. Thomas Chatterton: "Un suicide d'adolescent à Londres en 1770." [Thomas Chatterton: "An adolescent suicide in London in 1770."] *Annales Médico-Psychologiques*, 1971(Feb), Vol. 1(2), 161-184.—Reconstructs events in the life of the famous English writer who committed suicide at age 18. The biography is of psychological interest because Chatterton's literary talent was shown so early in youth, arising from the most unlikely social and educational background, and because symbols and elements present in his literary productions provide clues to the mental processes that ended in the taking of his own life.—H. E. King.

SMOKING & DRUG & ALCOHOL USE

10836. Babor, Thomas F. (U. Arizona) **Goals, expectations, and the perceived instrumentality of alcohol consumption as related to patterns of drinking behavior.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6887-6888.

10837. Borgatta, Edgar F. & Evans, Robert R. (Eds.) (U. Wisconsin) **Smoking, health, and behavior.** Chicago, Ill.: Aldine, 1968. xii, 288 p. \$10.95.—Presents a critical review of current research and public policy on the relationship between smoking and health. Papers by various specialists in the field cover the health issue, social and psychological aspects of smoking, and implications of the smoking-health problem for society.

10838. de la Vega, Gabriel. **On glue sniffing.** *Journal of the Hillside Hospital*, 1967(Jul), Vol. 16(3 4), 219-223.—A child who sniffs glue does so in an attempt to control dreams by producing visions through artificial means. Eventually the visions become a compromise and a condensation of impotent rage, atonement for guilt, and a means of vicarious sexual gratification (utilizing many infantile part-love objects with a great deal of bound excitement). Eventually the glue-sniffing leads to 2 things: either a clear break of a psychotic nature with hallucinations replacing the "visions," or the need to resort to other forms of addiction, e.g., heroin. 2 case studies are presented. Common features with the Iskower phenomenon are discussed.—S. R. Diamond.

10839. Haag, Richard A. (U. Hawaii) **The development of a reinforcements inventory and its relation to smoking behavior.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6875.

10840. Hager, David L., Vener, Arthur M., & Stewart, Cyrrs S. (Grand Rapids Junior Coll.) **Patterns of adolescent drug use in Middle America.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 292-297.

—Asserts that effective programs for drug prevention and rehabilitation must be based on reliable data reflecting accurate rates of use. An investigation of drug use among 4,220 white, middle-American adolescents in Grades 8-12 shows that although drug use begins early, overall reported usage rates are relatively low. Marihuana is the most extensively consumed drug. Although boys reported more experience with all types of drugs, both sexes showed similar patterns of consumption. The greatest percentage of increase in the use of soft drugs occurred between 15 and 16 yr. old and their greater use was reported by respondents in higher socioeconomic schools. High correlations existed between the use of 1 drug with another. The low frequency of the use of hard drugs suggests that their consumption is not a severe problem for the population sampled.—*Journal abstract.*

10841. **Harris, Eileen M.** (Southern Illinois U.) **A measurement of alienation in college student marihuana users and non-users.** *Journal of School Health*, 1971(Mar), Vol. 41(3), 130-133.—Attempted to measure the degree of alienation of college student marihuana users and nonusers in order to test the theory that drug usage is a form of rebellion from the established society. 1,380 undergraduates were asked to respond to a questionnaire consisting of socioeconomic and demographic data, a Likert-type scale, and the MMPI Lie scale. An analysis of the data, conclusions, and recommendations are included.—*G. S. Spitzer.*

10842. **Lipscomb, Wendell R.** (Mendocino State Hosp., Calif.) **Alcohol: A drug among drugs.** *California's Health*, 1971(Feb), Vol. 28(8), 12-13, 17.

10843. **Matchett, William F.** (Indian Health Service, Navaho Area, Ft. Defiance, Ariz.) **Who uses drugs? A study in a suburban public high school.** *Journal of School Health*, 1971(Feb), Vol. 41(2), 90-93.—81 students in a suburban public high school were studied by a self-administered questionnaire in an attempt to clarify the relationship between some of their subjectively reported attitudes and behavior, and their use of drugs (marihuana, methedrine, amphetamines, or LSD). It was found that there were 2 very different categories of people who were using drugs. 1 group was using them more heavily and seemed to fit the stereotype of an individual on the fringe of society. The other group was apparently only experimenting with drugs or using them socially, and were in fact even more secure, inquisitive, and active than were their nonusing peers.—*Journal summary.*

10844. **Mattheis, Ruth.** **Konferenz über Alkohol- und Drogengebrauch—Amsterdam 7.-9. April 1970.** [Conference on alcohol and drug use—Amsterdam April 7-9, 1970.] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1970(Oct), Vol. 19(7), 268-271.—Presents a summary of papers on historical developments on alcohol and drug use, the problem of adolescent drug users, psychopathological viewpoints, sociological and legal aspects, outcome studies on treatment of addiction, and biochemical and pharmacogenetical aspects of alcoholism.—*H. A. Euler.*

10845. **Russell, M. A.** (Inst. of Psychiatry, Addiction Research Unit, London, England) **Cigarette smoking: Natural history of a dependence disorder.** *British Journal of Medical Psychology*, 1971(Mar), Vol. 44(1), 1-16.—On the basis of a literature review, the case is made for considering cigarette smoking as a dependency disorder statistically linked to alcohol and drug dependency but which has a greater dependency-producing

potential than alcohol and barbiturates. The onset of smoking is related to social and psychological factors during adolescence—few start smoking after the age of 20. Reasons for continuing smoking are discussed, but the main reason appears to be dependence on the pharmacological effects of nicotine. Only about 15% of smokers are able to stop before 60 yr. of age. (3 p. ref.)—*A. C. Bower.*

10846. **Shiller, Alice.** (Public Affairs Pamphlets, New York, N.Y.) **Drug abuse and your child.** *Public Affairs Pamphlet*, 1970(May), No. 448, 28 p.—Notes the rise in drug abuse in the upper and middle classes as well as the younger age of the abuser. Signs of drug use and reasons for it are discussed. Information is given about glue-sniffing, marihuana, narcotics, amphetamines, and barbiturates. More effective ways of rehabilitating drug abusers are being sought in order to stem the tragic human cost of the drug problem. Drug maintenance programs, drug education, self-help groups as well as social and political groups involved in drug problems and rehabilitation are discussed.—*S. R. Diamond.*

10847. **Smart, R. G. & Fejer, Diane.** (Addiction Research Foundation, Toronto, Ontario, Canada) **Recent trends in illicit drug use among adolescents.** *Canada's Mental Health Supplement*, 1971(May), No. 68, 12 p.—Compared results of questionnaires on the prevalence and frequency of drug use from 6,447 7-13th graders in 1968 and 8,865 6-13th graders in 1970. The use of barbiturates, tranquilizers, and stimulants remained relatively stable, while that of alcohol, marihuana, the opiates, LSD, and other hallucinogens increased. More Ss used drugs in 1970 and used them more heavily, especially illicit drugs. Although more males than females used drugs, this ratio was reduced in 1970. Ss most likely to use drugs (a) came from Jewish or no religious backgrounds, (b) were from middle- or upper-class families, (c) had brothers or sisters who used drugs, (d) tended to do poorly in school, and (e) did not participate in school activities. Conflicting norms and overall alienation scores correlated positively with the use of all drugs. Social isolation was positively correlated with the use of alcohol, tobacco, glue, other solvents, barbiturates, and tranquilizers. Powerlessness was related to all drug use except the opiates, speed, and LSD. Parents, especially mothers, who were heavy users of psychoactive drugs were more likely to have children who used drugs. Some aspects of prevention of drug abuse in adolescents are considered.—*S. Knapp.*

10848. **Starkey, Lycorgus M.** (College Ave. United Methodist Church, Muncie, Ind.) **A clergyman looks at drug abuse.** *Journal of School Health*, 1969(Sep), Vol. 39(7), 478-486.—Discusses drug use and abuse from the theological perspective. Subtopics include: (a) damage to physical self, (b) spiritual growth, (c) personality, (d) challenging the psychochemical age, and (e) treatment.—*G. S. Spitzer.*

10849. **Snyder, Solomon H.** (Johns Hopkins U., Medical School) **Cannabis.** *Psychology Today*, 1971(May), Vol. 4(12), 39.—Provides a brief description of the plant *Cannabis sativa* and the forms of preparations made from it.—*E. J. Posavac.*

10850. **Wohlford, Paul & Giammona, Samuel T.** (U. Miami) **Personality and social variables related to the initiation of smoking cigarettes.** *Journal of School Health*, 1969(Oct), Vol. 39(8), 544-552. The initiation of smoking cigarettes appears to be neither a simple, abrupt all-or-nothing occurrence, nor a gradual,

smoothly accelerating process. Although the relationship in adults between extroversion and smoking has been replicated most often, the relationship between rebelliousness and smoking is solidly supported in longitudinal data regarding the presmoking personal dispositions.—G. S. Spitzer.

PERSONALITY

10851. Grasso, A. M., Nicoletti, F., Raffaele, R., & Falsaperla, A. (U. Catania, Clinic for Nervous & Mental Disease, Italy) **La personalità premorboza della schizofrenia in taluni aspetti neurofisiologici dell'organizzazione motoria.** [The premorbid personality of schizophrenia in some neurophysiological aspects of the motor structure.] *Acta Neurologica*, 1969(Nov), Vol. 24(6), 892-902.—Observed the electrophysiological aspects of muscular tone conditions. 50 Ss were divided into 2 groups: inert and active. In the inert group, an increase of muscle tone and an amplitude of the reflex response (T reflex) occurred. Despite an increase in the fusimotor activity, the motoneuronal alpha reflex remained unchanged. In the active group, electrophysiological data shows an increase in the amplitude of the H reflex and a decrease of the fusimotor activity (T reflex.) Results are of interest in the possibility that certain neurophysiological parameters correlate to personality models or character traits of 1 same personality model. (22 ref.)—A. M. Farfaglia.

10852. Torrance, E. Paul. (U. Georgia) **Broadening concepts of giftedness in the 70's.** *Gifted Child Quarterly*, 1970(Win), Vol. 14(4), 199-208.—Cites the present weaknesses in only concentrating on 1 criteria for judging giftedness and then developing individuals in only that area. Other qualities are outlined which are felt to be indicative of the type of talented individual who is often by-passed because his abilities lie latent or are manifested in unconventional ways. Once the broader definition of giftedness is accepted, the next step is to allow the same open-mindedness to prevail in developing the talents and to initiate highly individual programs geared toward the specific person.—S. Krippner.

PERSONALITY TRAITS & PROCESSES

Behavior Correlates

10859. Almgren, Per-Erik. (Lund U., Sweden) **Relations between perceptual defenses, defined by the meta-contrast technique, and adaptive patterns in two serial behavior tests.** *Psychological Research Bulletin*, Lund U., 1971, Vol. 11(3), 22 p.—Selected a repression group (n = 20) and an isolation group (n = 26) from 151 normal pregnant women. The defense mechanisms were defined by the metacontrast technique (MCT). The groups were similar in age, intelligence, neuroticism, and formal properties of their MCT behavior. Predictions were confirmed concerning the relationships between MCT defensive reactions and adaptive styles, defined by serial behavior methods (the Colour-Word Test and the Rod and Frame Test). Results support the percept-genetic model of perception and personality and may be regarded as evidence of the concurrent validity of MCT in a nonclinical group. (33 ref.)—*Journal abstract.*

10860. Andersson, Alf L. (Lund U., Sweden) **Personality as reflected in adaptive regulation of visual aftereffect perception: A review of concepts and empirical findings.** *Psychological Research Bulletin*, Lund U., 1971, Vol. 11(1), 23 p.

10861. Becker, Joseph; Doctor, Ronald M., Miranda, Manuel, & Wallace, Jean. (U. Washington) **Analytic-perceptual style and verbal conditioning.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 631-636.—Assessed relations among analytic-perceptual style, awareness, and desire for reinforcement within a Taffel-type verbal conditioning paradigm using 69 female undergraduates as Ss and controls. Witkin's Embedded-Figures Test (EFT) and M. Mayman's Rorschach form level scores were analyzed separately as indices of analytic-style. Data were analyzed by multiple linear regression with linear contrasts. EFT scores did not relate to any others. But form level interactions with awareness and desire for reinforcement and a triple interaction provided limited support for the hypothesis that an active analytic style facilitates awareness and verbal conditioning, if the reinforcer is desired. (17 ref.)—*Journal abstract.*

10862. Bhushan, L. L. (Bhagalpur U., India) **Leadership preference as a function of authoritarianism and intolerance of ambiguity.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Dec), Vol. 13(4), 217-222.—Attempted to determine whether

or not authoritarianism and intolerance of ambiguity are correlates of preference for authoritarian leadership. The California F Scale, Budner's scale for intolerance of ambiguity (IA), and a leadership preference scale developed by the investigator, were the instruments used. Ss were a randomly drawn sample of 400 undergraduate males. It was hypothesized and confirmed that preference for democratic leadership would show a substantial negative relationship with authoritarianism and IA. (49 ref.)—*R. D. Nance.*

10863. Cauthen, Nelson R. & Boardman, William K. (U. Georgia) **Body boundary and stimulus enhancement.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 559-563. —Investigated the relationship between body boundary and stimulus intensity by means of lifted weights. 38 undergraduates who had been administered a Rorschach were Ss. Ss with high Barrier scores were hypothesized to judge weights as heavier than those with lower scores. A disrupting variable was introduced into the task to test the 2nd hypothesis that attention contributed to the heightened intensity of stimuli. The 1st hypothesis was supported. The 2nd was not supported as both groups were equally affected by the disrupting variable.—*Journal abstract.*

10864. Dabbs, James M. & Kirscht, John P. (Georgia State U.) **"Internal control" and the taking of influenza shots.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 959-962. —Assessed expectancies about ability to control the environment and motivation to exert control among 510 undergraduates, 259 of whom had voluntarily taken influenza inoculations. Inoculation was more likely among Ss motivated to exert control but less likely among those who expected to exert control.—*Journal abstract.*

10865. Dargel, Russell & Kirk, Roger E. (Southwest Baptist Coll.) **Manifest anxiety, field dependency, and task performance.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 383-393. —Investigated the effects of manifest anxiety and field dependency upon human perceptual motor performance. 32 female undergraduates were selected as high- or low-anxious Ss as defined by the MA scale and field-dependent or independent as defined by the Hidden Figures Test. Ss performed 5 tasks differing in difficulty level. Results indicate that manifest anxiety did not affect performance on any of the tasks nor was there an interaction of manifest anxiety and field dependency. However, there was an effect attributable to field dependency for the moderately difficult tasks. Results are discussed in terms of (a) chronic and emotional reactivity hypotheses, (b) response competition, and (c) differences in perception of field-dependent and field-independent persons. (23 ref.) *Journal abstract.*

10866. Decker, Lawrence A. (Brigham Young U.) **Self-ideal discrepancy changes of repressors, sensitizers and neutrals given positive and negative feedback under dogmatic and non-dogmatic conditions.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6895.

10867. Fremont, Theodore S. (Oklahoma State U.) **Anxiety as a function of task performance feedback and introversion-extroversion.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6399.

10868. George, Robert J. (U. Missouri) **The effects of extraversion and general arousal in cue-elicited aggression.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6240.

10869. Greenberg, Roger P. & Fisher, Seymour. (State U. New York, Upstate Medical Center, Syracuse) **Some differential effects of music on projective and structured psychological tests.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 817-818. —Randomly assigned 40 female Ss to 1 of 2 groups which responded to a battery of psychological tests (Draw-A-Person Test, TAT, Bass' Famous Sayings, and the Bass-Durkee Hostility Scale) while listening to exciting or calming music. Ss' responses were more affected on projective than on structured tests. Ss listening to exciting music more frequently told hostile stories and stories with female power themes. With exciting music Ss also drew significantly taller figures on the Draw-A-Person Test and tended to show more fear of failure on Bass's Famous Sayings. The effects of ambiguity of musical stimuli and the effects of music on content and structure of test responses are discussed.—*Journal abstract.*

10870. Kilpatrick, Dean G. (U. Georgia) **Anxiety, performance of a complex intellectual task, and two GSR indices of autonomic response to psychological stress.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6905-6906.

10871. Lee, Dorothy E. & Ehrlich, Howard J. (Illinois State U.) **Beliefs about self and others: A test of the dogmatism theory.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 919-922. —Using a 29-item form of Rokeach's 40-item Dogmatism Scale the 7 propositions of Rokeach's theory of open- and closed-mind relating to beliefs about self and others were tested, using 444 undergraduates as Ss. It was hypothesized that closed-minded persons, in contrast to open-minded persons, would (a) hold negative beliefs about self and others, (b) hold contradictory self-beliefs, (c) engage in self-proselytization, (d) seek status and power, (e) report a sense of martyrdom, and (f) display moral self-righteousness. In keeping with theoretical expectations, all hypotheses were confirmed although the magnitudes of correlations between Dogmatism Scale scores and the dependent variable measures were low.—*Journal abstract.*

10872. McAdoo, William G. (Florida State U.) **The effects of success, mild failure, and strong failure feedback on A-State for subjects who differ in A-Trait.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6263.

10873. Owyang, Walter M. (U. Nebraska) **Ordinal position, frustration, and the expression of aggression.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6243.

10874. Rim, Y. (Technion-Israel Inst. of Technology, Haifa) **Values, cognitive width, external-internal control and tendency to increase performance.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Dec), Vol. 13(4), 223-226. —Discusses Rokeach's views on "values." The present study is an attempt to compare the ranked importance of values and certain personality variables. 75 23-28 yr. old male students ranked Rokeach's 2 lists of instrumental and terminal values. They also were given Pettigrew's Category Width Scale, Rotter's Internal-External Control Scale, and a digit substitution test. It is concluded that Ss differing in cognitive width and in expectancy for internal or external control, as well as those differing in degree of improving performance, differ in their value systems.—*R. D. Nance.*

10875. Tucker, Ann J. (Florida State U.) **The effects**

of audience size on self-report and behavioral measures of anxiety of male and female students in a public speaking class. *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6248.

10876. Willerman, Lee. (Wayne State U.) **Temporal integration of rewards and punishments as a function of delay of punishment and psychopathic tendency.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6886.

INTELLIGENCE

10877. Milan, Mikuláš. (Research Inst. of Pedagogy, Bratislava, Czechoslovakia) **Súčasný stav problému dedičnosti a prostredia v skúškach inteligencie.** [Present-day situation in the problem of heredity and environment in intelligence tests.] *Jednotná Škola*, 1971(Apr), Vol. 23(4), 334-350.—Reports that, although mental abilities have been tested through standard scales for 70 yr., the question of what is being measured by the ability scales has yet to be answered. Although results with monozygotic twins have been very valuable, they are equally applicable to the study of environmental influence and genotype. The Gauss curve of test results is considered to have its source in random conditions of knowledge among people as required in dealing with the test items. Graphs and tables are presented showing (a) the distribution of the results of 58,997 9th graders on a physics diagnostic test, (b) changes in the IQs of 5th graders at the end of the school year and after school vacation, and (c) the probable increase in IQ after a full year of programmed teaching in 2 subjects. It is concluded that, while ability tests have been useful in assessing the influence of environment and genotype on the effectiveness of teaching, the widespread concept of ability as an unalterable hereditary condition is the cause of nihilism and stagnation in the study of teaching. (Russian summary)—*English summary*.

10878. Wendeler, Jürgen. (German Research Inst. for International Pedagogy, Frankfurt, W. Germany) **Vergleich einiger Faktorenanalysen muttersprachlicher Leistungen.** [Comparison of several factor analyses of native verbal ability.] *Diagnostica*, 1970, Vol. 16(2), 76-94.—The accepted importance of verbal tests in all research on mental abilities prompted a restudy of previously published analyses of verbal ability. Findings as to the number and kinds of dimensions of native verbal ability are somewhat uncertain. The goal of this study was to discover greater uniformity and better overview of the results, based on selected data from Carroll, Taylor, Rogers, and Guilford and Christensen. Data were derived from highly specialized S groups (13-15 yr. old students, high school seniors, college undergraduates, and naval air cadets). The factorial study confirmed, in the final analysis, the limitations of individual diagnostic application, if factorial validity is a prerequisite. While a good certainty is present in vocabulary measurements, a method to capture the quality of language structure revealed in development and organization of oral or verbal fluency is lacking. Each of the 4 studies revealed a factor of "verbal imagination" which, however, presented interpretive difficulties because of the affect of oral vs. written test approach.—*H. Malki*.

CREATIVITY

sonality Assessment & Research, Berkeley) **The dream of art and poetry.** *Psychology Today*, 1968(Dec), Vol. 2(7), 18-23, 66.—Studies of distinguished, creative individuals reveal that persons of high creativity have IQs in the upper 10 or 5% but that within this range, IQ is not related to creativity. 3 distinct traits characterize creative people: (a) they discern more complexity than others, (b) they possess more perceptual openness and resist premature judgmental closure, and (c) they depend on intuition and hunches to a great degree. Finally, creative people seem motivated to create since they often expend a great amount of energy on their productions.—*E. J. Posavac*.

10880. Carlier, Michele. (U. Paris, Lab. of Experimental Psychology, France) **Flexibility, a dimensional analysis of a modality of divergent thinking.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 447-450.—Administered a battery of 26 verbal and nonverbal tests of flexibility to 78 boys (average age 18 yr.), and the 6 factors extracted accounted for 53% of the total variance: (a) general flexibility, (b) associative flexibility, (c) ideational flexibility, and (d) graphic flexibility. The 2 remaining factors cannot be interpreted. Analysis of the same battery for a population of 107 girls (average age 18 yr.) yielded essentially the same factorial structure.—*Journal abstract*.

10881. Koriat, Asher. (U. California, Berkeley) **Creativity and the structure of memory.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6242.

10882. Rossman, Betty B. (U. Denver) **Cognitive, motivational and temperamental indicants of creativity.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6301.

10883. Speedie, Stuart M., Asher, J. William, & Treffinger, Donald J. (Purdue U.) **Comment on "Fluency as a pervasive element in the measurement of creativity."** *Journal of Educational Measurement*, 1971(Sum), Vol. 8(2), 125-126.—P. M. Clark and H. L. Mirels (see PA, Vol. 44:19354) reported a "correction procedure" for fluency in scoring figural divergent thinking measures, which resulted in a reduction from .40 to .20 in the average intercorrelation of scores excluding fluency. Since their correction involved shortening the tests, at least part of the reduction of the intercorrelations can be explained by the reduced reliability of the test. Estimates of the magnitude of this effect are provided. It is concluded that the "correction" reported is at best a partial correction, and that the potential merit of other procedures should be considered.—*Journal abstract*.

10884. Worthen, Blaine R. & Clark, Philip M. (U. Colorado) **Toward an improved measure of remote associational ability.** *Journal of Educational Measurement*, 1971(Sum), Vol. 8(2), 113-123.—A lack of satisfaction with existing measures of creativity and the need for a more theoretically sophisticated approach to measurement in this area were identified. Mednick's remote association theory of creative behavior was reviewed, and Mednick and Mednick's operationalization of that position, the Remote Associates Test (RAT), was analyzed both logically and empirically. An alternative measure of remote associational ability, the Functionally Remote Associates Test (FRAT), was offered as a more logical extension of Mednick's theory. Empirical data are presented which suggest the superiority of FRAT to RAT as a measure of creativity. (20 ref.)—*Journal abstract*.

PERSONALITY MEASUREMENT

10885. Baker, Frank. (Harvard Medical School, Boston, Mass.) **Measures of ego identity: A multitrait multimethod validation.** *Educational & Psychological Measurement*, 1971(Spr), Vol. 31(1), 165-174.—98% of the 715 undergraduate freshmen who had received a questionnaire including direct-answer and sentence-completion methods of measuring ego identity were Ss. Kuder-Richardson reliability coefficients of 4 measures of ego identity ranged from .23 to .48 for the direct scales and from .28 to .55 for the sentence-completion measures. Only 1 measure, inner sameness and continuity, was regarded as having discriminant validity.—N. M. Chansky.

10886. Berger, Wallace G. (U. Michigan, Highway Safety Research Inst.) **Note on emotionality of item wording as a variable in a personality scale.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 415-418.—Describes 3 forms of a personality scale, i.e., the short-form Dogmatism Scale, with each form differing in its degree of rated emotionality of wording. Items in the forms were randomized, combined, and administered to 77 college Ss. Findings indicate that although the variances, internal consistencies, and validities were not affected by emotionality of item wording, the mean endorsement scores of the forms did vary inversely with the forms' level of emotional wording. *Journal abstract.*

10887. Damarin, Fred. (U. Delaware) **A special review of Buros' Personality Tests and Reviews.** *Educational & Psychological Measurement*, 1971(Spr), Vol. 31(1), 215-241.—An analysis of the content of *Personality Tests and Reviews* reveals certain trends in the production of personality tests. Among other observations are those which show an exponential growth in the publication of personality tests. Rate of obsolescence is greater for the nonprojective tests. There is a table presenting annual references per test. Improvement of personality tests according to technical recommendations has been slow. Some projective methodologies may be abandoned in the near future. The book is lauded as a source of information concerning the validation of personality tests against real world criteria.—N. M. Chansky.

10888. Hamilton, David L. (Yale U.) **A comparative study of five methods of assessing self-esteem, dominance, and dogmatism.** *Educational & Psychological Measurement*, 1971(Sum), Vol. 31(3), 441-452.—70 fraternity members were administered a battery of personality tests comprising (a) the CPI, an empirically developed test; (b) the Rokeach Dogmatism Scale and the Janis-Field Feelings of Inadequacy scale, self-rating measures; (c) the Leary Interpersonal Check List; (d) dominant-submissiveness measured by self-rating on 3 7-point scales; and (e) peer nominations on 22 attributes. A quasi multitrait-multimethod design was used. The 4 methods of assessing dominance were highly correlated, but the several methods of assessing self-ratings performed similar to the other methods in measuring the attributes under consideration.—N. M. Chansky.

10889. Hjelle, Larry A. (State University Coll. New York, Brockport) **Social desirability as a variable in the Locus of Control Scale.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 807-816.—Conducted 3 studies with a total of 515 male and female undergraduates from Catholic institutions to explore several related questions

concerning the social-desirability variable in the Internal-External Control (I-E) scale. Results (a) indicate that a majority of the I-E items have probability of endorsement values which depart significantly from a hypothetical value of $P = .50$, both for standard and social-desirability instruction conditions; (b) demonstrate a small relationship between S's I-E score and S's tendency to agree with I-E items of high response-preference value ($r = .20$), especially for those Ss designated as internally controlled; and (c) show a significant relationship between the social-desirability scale values for I-E items and the probability of I-E item endorsements ($r = .43$). A sizeable number of internal items were rated as significantly more socially desirable than the corresponding external items. It is suggested that the I-E scale may be contaminated by social desirability and that consequently the validity of the scale as a measure of locus of control is questionable. *—Journal abstract.*

10890. Johnson, Jane C. (U. Missouri) **A comparison of two personality systems: The PAS and Wilkin's field dependence-independence.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6241-6242.

10891. Kratochvíl, Stanislav. **BOD(h): Dotazník ke kvalitatívnímu rozboru rysů osobnosti.** [BOD(h): A questionnaire on the qualitative analysis of personality features.] *Sborník Prací Filosofické Fakulty Brněnské University*, 1968, Vol. 17(13), 5-14.

10892. Kulis, Joseph C. (Northwestern U.) **General testing factors, person-item distance, and the repeated testings effect.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6260-6261.

10893. Lane, Sam H. (Texas Christian U.) **The role of differential patterns of responses in the relationship between preference and complexity.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6878.

10894. Leyens, Jacques P. (U. Louvain, Belgium) **La mesure de l'identification.** [The measurement of identification.] *Année Psychologique*, 1970, Vol. 70(1), 179-194.—Identification, or modeling the thought, feeling, or action of another, and its supposed consequences, are measurable by several techniques: projective tests, tests of masculinity-femininity, questionnaires measuring real or perceived resemblance, and the measurement of identification according to social learning. Social psychologists are concerned with variables reinforcing identification and with the modalities of reinforcement. In this search, the questionnaire of perceived resemblance and the reproduction of anecdotal behavior are the best adapted to the purpose. (47 ref.)—G. Rubin-Rabson.

10895. Pedhazur, Elazar J. (New York U.) **Factor structure of the Dogmatism Scale.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 735-740.—Studied the factor structure of the Dogmatism Scale using 309 male and 526 female graduate students and teachers as Ss. In separate analyses for males and females 5 factors emerged, which were rotated orthogonally and obliquely, resulting in very similar loadings for both rotations. Since a single common factor did not emerge and since the correlations among the 5 factors were low, with some near 0, the use of the Dogmatism Scale as a summated rating scale is questioned. The solutions for males and females, though similar, were sufficiently different to

warrant treating them separately. It is suggested that the measurement of a construct as complex as dogmatism may be enhanced by resorting to a multidimensional approach. (16 ref.)—*Journal abstract*.

10896. Reiter, Henry. (C. W. Post Coll., Long Island U.) **Relationships among four measures of anxiety.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 761-762. —Administered the MA scale, Sarason Test Anxiety Questionnaire, 16 PF, and Page Fantasy Scale to 76 male and female undergraduates. Correlations among the 4 tests were all significant. The magnitudes of the coefficients suggest that the tests measure different facets of anxiety. The 16 PF and the MA scale are considered to measure general anxiety.—*Journal abstract*.

10897. Schneewind, Klaus A. (Erlangen-Nürnberg U., Inst. of Psychology, W. Germany) **Wie universell sind Cattell's objektive Persönlichkeitsfaktoren?** [How universal are Cattell's objective personality factors?] *Diagnostica*, 1970, Vol. 16(2), 94-97.—Examines the "salient variables" similarity index developed by Hundleby, Pawlik, and Cattell and finds that median values decrease with increasing usage frequency. From this it is concluded that proof of the universality of these personality factors has not been satisfactorily presented. While not ruling out completely the feasibility of establishing such universal personality factors, for more rigorous reliability the following are recommended: (a) increasingly heterogeneous test groups, (b) control of overlapping variables, (c) greater attention to psychometric qualities, (d) control of situational affects of test procedure, and (e) employment of analytic rotation techniques.—H. Malki.

Inventories

10898. Palmer, Warren H. (U. Alabama) **Actuarial MMPI interpretation: A replication and extension.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6265-6266.

10899. Timm, Ulrich. (U. Freiburg, Inst. of Psychology, W. Germany) **Eigenschaftsratings als Validitätskriterien eines Persönlichkeitsfragebogens: Ein Beitrag zur Validierung des FPI.** [Ratings of traits as validity criteria of a personality questionnaire: An attempt to validate the FPI.] *Diagnostica*, 1971, Vol. 17(1), 26-45.—The Freiburg Personality Inventory (FPI) is a recently published multidimensional personality questionnaire which stands in contrast to other tests based on German translations of Anglo-American tests. The FPI represents an independent development of the Freiburg Institute of Psychology to satisfy recent criticism of usage of literal translation of foreign language tests. Several years of research produced 12 scales which measure a broad spectrum of personality dimensions. Based on the data from a sample of 100 Ss, a profile of 37 items was correlated to the 12 FPI scales. Despite manifold computational approaches, the insufficiency of the sample is criticized, and the experiment is considered successful only to the extent of partial validation of the FPI.—H. Malki.

Projective Techniques

10900. Lavit, Ronald J. (Oklahoma State U.) **Effects of levels of anxiety on Holtzman Inkblot responses.**

Dissertation Abstracts International, 1971(Apr), Vol. 31(10-B), 6261.

Rorschach Test

10901. Dudek, Stephanie Z. (U. Montreal, Quebec, Canada) **Portrait of the artist as a Rorschach reader.** *Psychology Today*, 1971(May), Vol. 4(12), 46-47, 78-84.—The Rorschach responses of 60 artists were compared to those of 22 creative nonartists and 21 non-creative nonartists. The artists saw much more in the forms than the others and often their responses were quite bizarre. While this type of response fits the stereotype of the artist as personally abnormal and/or tortured, it does not reveal the artists' close association with their work. A work-attitude questionnaire was administered to 30 painters and 30 successful professionals. It revealed that the painters felt that they could not have chosen a different occupation while this was not true of the professionals.—E. J. Posavac.

10902. Bender, Henry E. (New York U.) **Emotional components of value orientations: A study of relationships between emotion dimensions and value orientations as a function of maladjustment.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6888-6889.

10903. Carpenter, William T., Tamarkin, Norman R., & Raskin, David E. (National Inst. of Mental Health, Bethesda, Md.) **Emergency psychiatric treatment during a mass rally: The March on Washington.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1327-1332.—Presents a rationale for establishing emergency psychiatric facilities during mass demonstrations. Special aspects or attributes, e.g., trust, confidentiality, the authoritarian role of the physician, legal complications, the management of potentially violent patients, and the evaluation of thought processes are discussed. The low incidence of psychiatric casualties and the relative rarity of adverse drug reactions during the November 1969 march on Washington are documented: the majority of the most disturbed patients came to Washington for idiosyncratic reasons and did not regard themselves as antiwar protestors.—*Journal abstract*.

10904. Committee on Preventive Psychiatry. **The dimensions of community psychiatry.** *GAP Report*, 1968(Apr), Vol. 6(69), 877-908.—Presents an overview of community psychiatry designed to help psychiatrists and other professionals to plan and develop effective programs. The psychiatrist's roles as therapist, teacher, investigator, or all of these, are described. 5 approaches to his roles and role shifts in community settings are presented and illustrated. Examples of community approaches include psychiatric participation in the Peace Corps, community action programs, and epidemiological studies. (75 ref.)—P. McMillan.

10905. Courtney, G. R. (Central State Hosp., Milledgeville, Ga.) **Refractive errors in institutionalized mentally retarded and emotionally disturbed children.** *American Journal of Optometry & Archives of American Academy of Optometry*, 1971(Jun), Vol. 48(6), 492-496.—Screened 106 institutionalized emotionally disturbed (ED), 40 trainable mentally retarded (TMR), and 69 educable mentally retarded (EMR) children in a school of special education for refractive errors. As

individual classes and as a single retarded group. IMR and EMR Ss showed significantly more hyperopia than FD Ss and Ss of comparable age from the normal classroom. IMR Ss did not differ significantly from EMR Ss. *Journal abstract.*

10906. Ellsworth, Robert B. (Veterans Administration Hosp., Roseburg, Ore.) **Evaluating and applying information about treatment outcome.** *Hospital & Community Psychiatry*, 1970(Apr), Vol. 21(4), 115-117. Discusses the difficulties of determining outcomes of psychiatric treatment. Since generalizations concerning a patient's behavior in a clinical setting cannot be extended to a community setting, a study of the validity of family ratings was conducted. It was found that there was considerable consensus between family and staff ratings. It was hypothesized that knowledge of the results would enable members of a therapeutic team to identify the effectiveness of their treatments with certain patients and improve their strategies. A pilot program was conducted in which male psychiatric patients were assigned to 1 of 3 hospital teams. Feedback on the patients was obtained from community informants and compared with prehospitalization assessments. Preliminary results indicate that feedback has no impact, unless the therapeutic team can 1st (a) identify the strategy which works best for them, and (b) adopt the approaches which are most promising. It is concluded that the procedure utilized may be effective for any mental health agency in upgrading its effectiveness. —S. Knapp.

10907. Frevhan, Fritz A. (St. Vincent's Hosp. & Medical Center, New York, N.Y.) **The psychopathologist: What man of science?** *Comprehensive Psychiatry*, 1970(Sept), Vol. 11(8), 391-402. Considers the development of the American Psychopathological Association. Jaspers' concept of psychopathology in relation to science, and some recent problems and questions. The future of psychopathology appears more promising than at any time in the past. —H. Prager.

10908. Greenberg, Bernard G., Abernathy, James R., & Horvitz, Daniel C. **A new survey technique and its application in the field of public health.** *Mitbank Memorial Fund Quarterly*, 1970(Oct), Vol. 48(4), Pt. 2, 30-38. Reports results of a survey made in 5 metropolitan areas of North Carolina using the randomized response procedure in obtaining data on induced abortion, oral contraceptive use, emotional problems, and opinions of respondents toward the interviewing technique.

10909. Greenblatt, David J., & Shader, Richard I. (Montefiore Hosp., New York, N.Y.) **Meprobamate: A study of irrational drug use.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(4), 1297-1303. The history of the use of meprobamate illustrates how physicians' other than scientific evidence may determine and justify an attitude of general optimism and uncritical studies with favorable results combined to elevate meprobamate to the position of America's magical calmative tranquilizer. This drug remains in wide use despite a large body of sound scientific data that question its efficacy. Today even pharmacologic solutions to the stresses and tensions of life are often sought in place of more effective forms of mastery. This trend, which may not be a healthy one, is fostered by physicians who prescribe tranquilizers indiscriminantly. (72 ref.) *Journal abstract.*

10910. Houck, Robert L., & Mefferd, Roy B. (Houston) **Perceptual categorization: Factors influencing identification and reproduction of visual and auditory stimuli.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 519-522. Used a near threshold auditory and 3 visual tasks with 12 volunteer patients receiving phenothiazine therapy. It was demonstrated that the more cues available for perceptual categorization, the fewer the errors made in reproductions of stimuli. Stimuli were 5-10 item lists of nonsyllabic combinations of 2 consonants and 2 vowels. *Journal abstract.*

10911. Kulj, L., & Malmquist, A. (U. Lund, Malmö, Sweden) **Motherhood and childlessness in monozygous twins: I. Early relationships.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 17-21. As the 1st step in a larger study that assesses the effects of motherhood on physical and mental health of the mother, 52 mothers were compared to their identical twins who had not produced children (age range = 40-60 yr. of age). The mothers were older at 1st pregnancies than the general population and in more cases enjoyed their own mothers' preference compared to the childless sisters. Childless twins were more often serious minded and introverted in early temperament and more often intrapair dominant. Ideal control Ss are far from identical as far as psychological factors are concerned. (16 ref.) —R. L. Sulzer.

10912. Kolb, Lawrence C. (New York State Psychiatric Inst., New York) **The institutes of psychiatry: Growth, development and future.** *Psychiatric Medicine*, 1971(Nov), Vol. 1(1), 86-95. Discusses the concept of the institution and its evolution and growth as part of the Western institutional development. The New York State Psychiatric Institute, the 1st established institute in the specialty, and the history of its beginnings are documented. Discussions of the conflicts of the aims of the institute of related universities, governmental agencies and private supporters are included. The problem of bridging the gap between the different agencies in forming a multidisciplinary institution to function in an interdisciplinary manner is pointed out. Theoretical and administrative techniques valuable in settling the disharmony are included. (43 ref.) *Journal abstract.*

10913. Lewis, Aubrey. (Inst. of Psychiatry, London, England) **Paranoia and paranoid: A historical perspective.** *Psychological Medicine*, 1970(Nov), Vol. 1(4), 2-12. The terms paranoia and paranoid are viewed with a historical perspective from early Greek times to the present with special emphasis on German waters and the much disputed "paranoia question." Change of the conceptual meaning and the usage of these words are developed. Kraepelin is discussed as the "last word in central opinion" along with Heurich, Kretschmer, Kretschmer and Freud, and a historical view of the French, British, and American contemporary perspectives are included. (86 ref.) —H. Rutter.

10914. Lindenthal, Jacob J., Myers, Jerome A., Pepper, Max P., & Stern, Maxine S. (Yale U.) **Mental status and religious behavior.** *Journal for the Scientific Study of Religion*, 1970(Spring), Vol. 9(2), 143-149. Interviewed 908 adults twice in a 2-yr period to assess their degree of psychopathology, religious participation, the occurrence of specific life events, and the religious response to such events. Ss completed a modified form of the Health Opinion

ancey and were classified as very impaired, moderately impaired, or unimpaired. As the degree of impairment increased, it was found that (a) general participation in organized religious activity decreased, (b) church attendance was reduced in time of crisis, and (c) prayer increased in times of crisis. It is concluded that: "The severely impaired do not seem to use the religious institution to cope with reality, as commonly believed, nor do they turn to its organized activities for help in times of crisis." S. Knapp

10915. Malmquist, A. & Kaij, L. (U. Lund, Malmö, Sweden) **Motherhood and childlessness in monozygous twins: II. The influence of motherhood on health.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 22-28.—Before the 1st birth, twin sisters who later produced children were not different in psychiatric, somatic, or gynecological symptoms when compared to their later childless twin sisters. After birth the probands exhibited significantly higher psychiatric, somatic, and total morbidity compared with their co-twins. Older primiparas are known to have higher risk of complications, and this factor plus a possible adverse effect of parity itself appear to be the most important influences on the results. Psychiatric overmorbidity was highest for mothers of 2 children and absent for higher parity. Hence, the pathogenic effect of parity is not additive. —R. L. Sulzer.

10916. Mariátegui, Javier. **Asistencia psiquiátrica y realidad sociocultural: Sobre la utilización de recursos en países en desarrollo.** [Psychiatric aid and sociocultural reality: Concerning the utilization of resources in developing countries.] *Revista de Neuropsiquiatria*, 1970(Jun), Vol. 33(2), 102-113.—Reviews some aspects of culturally traditional procedures for integrating a wide program of psychiatric resources in developing countries in order to increase in a multiplicative manner the effectiveness of current and future facilities. The limitations of modern resources are considered in these procedures. The following aspects are examined: (a) the problems of internal migration, (b) the mental health problems resulting from poverty, and (c) the positive aspects of folk medicine. Each of these points is discussed in terms of its present-day significance as well as its implications for the future. (English, French, & German summaries) (23 ref.) —L. M. Luosa.

10917. Monro, A. B. (Long Grove Hosp., Epsom, Eng.) **The role of the hospital in psychiatric research.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 1-6.—At one time research was done in the hospitals because that's where the patients were. Now the center of gravity for psychiatric research is in major units or teaching centers. Research now is a cooperative venture without the former exaggerated emphasis on the importance of the clinician's role. The modern psychiatric hospital provides 1 pole of a complicated nexus of relationships between clinicians and research workers. —R. L. Sulzer.

10918. Ollendorff, Robert H. & Adams, Paul L. (U. Pennsylvania) **Psychiatry and the draft.** *American Journal of Orthopsychiatry*, 1971(Jan), Vol. 41(1), 85-90.—Discusses the minor influence the military draft in the United States has had on the attitudes and emotions of the middle class youth. Old and young exhibit a draft-related disaffection with established values, and the young are further corroded by draft-related psychopathology. The profiles of 2 types of undergraduates—the disaffected and the mentally ill—who become

enmeshed in draft problems are presented. This predicament of the middle class is shared by the psychiatrist, whose counseling and diagnosis can be contradicted arbitrarily by the needs of an implacable system.—*Journal abstract.*

10919. Polonio, P. (U. Lisbon, Portugal) **Body-mind problems from an empirical point of view.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 7-10.—Psychiatric schemata of description and classification are as imperfect as all the theories that claim to explain human psychopathology. These theories—constitutional, psychoanalytical, and social—lend much in the way of medieval charm to psychiatry, but are little if at all better than the ancient doctrines of the humors. Prerational thinking should be superseded by placing psychiatry on a solid, wholly empirical basis. The common ground for union of psychotherapy and somatic therapy must be service to the patient.—R. L. Sulzer.

10920. Postel, J., Postel, M., & Pivat, P. H. (Maison-Blanche Psychiatric Hosp., Neuilly-sur Marne, France) **Les deux introductions au "Traité-philosophique" de P. Pinel.** [The two introductions to Pinel's "Traité Médico-Philosophique."] *Annales Médico-Psychologiques*, 1971(Jan), Vol. 1(1), 15-48.—Compares the introductions written for the 1801 and 1809 editions of Pinel's historic treatise as a way of evaluating the growth and change in his outlook during this critical period of his thinking. Because of the historic importance of the writings of the man who first "struck the chains" from the mental patient and reformed Western civilization's attitude toward mental disorder, the 2 introductions are reproduced here in detail with a coded reference made to all additions, subtractions, and reformulations between the 2. Stylistic changes, as well as altered content, bear witness to the considerable evolution of Pinel's thought in less than a decade. While the 1st edition of his work can be regarded primarily as a monograph on mania, the 2nd edition is truly a "Treatise on Mental Alienation" in which mania finds its proportionate place among the descriptions given of the several forms of mental disorder.—H. E. King.

10921. Rao, B. S. (All-India Inst. of Mental Health, Bangalore) **Sialic acid (N-acetyl neuraminic acid, NANA) levels in cerebro-spinal fluid of patients with psychiatric and neurological disorders.** *Transactions of All-India Institute of Mental Health*, 1969(Dec), Vol. 9, 35-38.—Determined total and free sialic acid levels in cerebro-spinal fluid (CSF) by the method of Papadopoulos and Hess with samples from 198 patients with psychiatric and neurological disorders. Samples of CSF were obtained from 8 Ss who were undergoing spinal anesthesia and served as controls. A significant increase of both fractions was noted in patients with TB meningitis and spinal cord tumors. The increase in sialic acid level was always associated with elevation in the protein content of CSF.—*Journal summary.*

10922. Redjinski, John. (Menninger Foundation, Topeka, Kan.) **The Utica crib.** *Bulletin of the Menninger Clinic*, 1971(May), Vol. 35(3), 202-206.—Reviews, for historical interest, the "Utica crib," a covered bedstead, used mostly for mental patients as a restraint from rising but allowing some freedom of motion. The 1st mention of this restraining device was noted as November 1845.—J. Z. Elias.

10923. Seménov, S. F., Chuprikov, A. P., & Shapiro, F. Ya. (Moscow Research Inst. of Psychiatry, USSR) **Issledovanie razlichnykh tipov antitel k DNK u**

bol'nykh epilepsiei, shizofreniei i psikhicheskoi zdorovykh lits. [Study of different types of anti-DNA antibodies in epileptics, schizophrenics and the mentally normal.] *Zhurnal Nevropatologii i Psikiatrii*, 1971(Feb), Vol. 71(2), 248-253. —Blood samples were taken from 55 epileptics, 44 schizophrenics, and 116 normal controls in a comparative study of different types of antibodies to DNA: F-DNA (boiling and formaldehyde treatment), D-DNA (denatured by boiling), and N-DNA (native). As compared to normal donors, epileptics displayed an increase in frequency of anti-DNA antibodies—a difference which was also qualitative, in that along with antibodies to F-DNA there were those to D-DNA, providing evidence of the degree and duration of the processes of DNA autoimmunization. Relationships were disclosed between the presence of anti-DNA antibodies and age, sex, clinical state, and type of course of the epileptic process. In schizophrenics the presence of antibodies to F-DNA did not exceed in frequency that in normal donors. However, antibodies to D-DNA appeared more frequently in schizophrenics and in epileptics (in the former less than in the latter). Antibodies to N-DNA were not observed anywhere. It is concluded that mental diseases may be accompanied by disturbances of DNA metabolism. (English summary) (15 ref.).—*J. D. London*.

10924. **Tucker, Robert C., et al.** (Yale U.) **Training, treatment, therapy.** *American Journal of Orthopsychiatry*, 1971(Mar), Vol. 41(2), 261-274.—Presents digests of 13 of the papers presented at the 48th annual meeting of the American Orthopsychiatric Association in 1971. Topics covered include consumer oriented consultation; residential treatment and "living in"; family approach and community-oriented educational programs for emotionally disturbed and fatherless boys; female mental patients; responses to a fatally ill child; and abortion in psychological perspective.

10925. **Turner, R. Edward.** (Clark Inst. of Psychiatry, Toronto, Ontario, Canada) **Kenneth George Gray, M.D., 1905-1970.** *Canada's Mental Health*, 1971(Mar), Vol. 19(2), 27-28.—Summarizes the life and work of K. G. Gray, noting his contributions to forensic psychiatry.—*P. Hertzberg*.

10927. **Critchley, Deane L.** (New York U.) **The relationship between the induced set of psychiatric diagnostic labels and closed-mindedness on the perception of child behavior among baccalaureate students in nursing.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11), 6712-6713.

10928. **De Rosier, Helen A.** (4625 Douglas Ave., Bronx, N.Y.) **Supervision of the first-year psychiatric resident: I. "Accentuate the positive."** *Psychiatric Quarterly*, 1970(Jul), Vol. 44(3), 435-442.—Considers the fact that the most severely ill psychiatric patients are usually treated by the most inexperienced psychiatrists, usually without damage and in many cases to the benefit of the patients. The optimism and enthusiasm of the 1st yr. resident are discussed as contributing to this effect. It is recommended that the resident in supervisory sessions be cautioned against (a) the direct and undiluted

application of analytic theory and techniques to these patients, and (b) engaging the patient in lengthy discussions of his pathology. Techniques which the resident might use to determine and emphasize the patient's areas of strength are discussed. It is suggested that such a procedure may allow the resident to be of maximum help in a short time period in returning the patient to his former level of functioning.—*S. Knapp*.

10929. **Eysenck, Hans J.** (U. London, Inst. of Psychiatry, England) **Relation between intelligence and personality.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 637-638.—Administered 398 trainee male nurses 2 intelligence tests and a personality inventory, the Mill Hill Vocabulary Scale, the Progressive Matrices test, and the P.E.N. Test. Ss were found more extraverted and less neurotic than the general population. Intelligence was independent of extraversion and neuroticism but correlated negatively with the Lie scale.—*Journal abstract*.

10932. **Kalisch, Beatrice J.** (U. Maryland) **An experiment in the development of interactive and predictive empathy in nursing students.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6715.

10933. **Kreinik, Phyllis S. & Colarelli, Nick J.** (Ft. Logan Mental Health Center, Denver, Colo.) **Managerial grid human relations training for mental hospital personnel.** *Human Relations*, 1971(Feb), Vol. 24(1), 91-104.—Discusses the effects of a Blake-Mouton grid orientation training program on a state hospital staff. Commitment to more candid interpersonal exchange and to group problem-solving was achieved, with neutrality and compromise regarded as less desirable and potent ways of dealing with organizational problems. These effects were preserved for at least 3 mo. after the laboratory program. The staff was also better able to identify organizational problems as emerging from their own common efforts, and, thus, more collectively aware of their ability and resources for solving problems. As a consequence of more critical self-evaluation and greater awareness of intraorganizational issues, there was a concomitant increase in critical attitudes toward the organization with less willingness to exonerate it by an appeal to external influences.—*W. W. Meissner*.

10934. **Libby, Bruce C.** (U. Minnesota) **The AB dimension in a counseling analogue.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6262-6263.

10935. **Monke, Robert H.** (Fresno State Coll., School of Education) **Effect of systematic desensitization on the training of counselors.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 320-323.—Attempted to determine whether the technique of desensitization would reduce the initial anxiety experienced by the beginning counselor trainee before and during his 1st counseling session. 30 counselor trainees in a National Defense Education Act Elementary Counseling and Guidance Institute were randomly assigned to either an experimental or control group. The treatment consisted

of 2 sessions of relaxation and 5 of desensitization. The criterion measures employed included (a) physiological measures using heart rate and skin resistance, (b) tape evaluations, and (c) self-reports. Analyses of the data reveal significantly less self-reported anxiety in the experimental group. No differences were found in heart rate, skin resistance, and tape-evaluation measures.—*Journal abstract.*

10938. Quarrick, Eugene A., Jacobs, Marion, & Trick, O. Lee. (West Virginia U., Medical School, Morgantown) **A new role for psychology students in a medical setting.** *American Psychologist*, 1971(Mar), Vol. 26(3), 317-319.—Describes a 3-wk project in which psychology practicum students assumed primary responsibility for patient care on the psychiatric unit of a large medical center hospital. The project had interesting implications for issues related to clinical training and professional relationships. The pace was intense and demanding and students became totally involved in treating the patients and learning about themselves. Each student worked with about 7 patients primarily through group therapy and family counseling. It is felt that this training model was more likely to test the student's commitment to psychology and to solidify a professional identity than more traditional programs. The project was unique in that the only doctor-patient relationship that the patients had was with the psychology student. 2 physicians were available for medical consultation. Informal observations and analysis of rating scales filled out by the patients indicate that they valued highly the contribution of the students. It is concluded that current trends in medicine toward comprehensive care and family practice necessitate the physician's relinquishment of his exclusive relationship with the patient and to bring in nonmedical specialists on a peer basis.—*E. A. Quarrick.*

10939. Rowe, Dorothy. (Whiteley Wood Clinic, Sheffield, England) **An examination of a psychiatrist's predictions of a patient's constructs.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 231-234.—Repertory grids of 20 elements and 15 constructs sorted by a patient and the patient's psychiatrist showed differences related to errors on the psychiatrist's predictions about 1 construct and 1 element. This suggests that the repertory grid can be used to examine interpersonal perceptions.—*R. L. Sulzer.*

10940. Siller, Jerome. (New York U.) **The psychopathology of status.** *Rehabilitation Counseling Bulletin*, 1970(Dec), Vol. 14(2), 102-107.—Status differentials are learned by direct experiences and less directly but probably no less effectively by imitation and modeling. Destructive differential situations develop within the context of transference distortions. Consequently the teacher or doctor should learn the differences between rational and irrational authority or authoritative vs. authoritarian procedures. Status differential is viewed as a prerequisite for the development of independence and maturity.—*A. J. Ter Keurst.*

PSYCHOTHERAPY & ANALYSIS

10942. Abramson, Harold A. (South Oaks Research Foundation, Amityville, N.Y.) **Reassociation of dreams: I. Repetitive analysis of the first dream to induce regression, resolve a negative transference, and assess improvement.** *Journal of Asthma Research*, 1971(Mar), Vol. 8(3), 115-150.—Discusses data from psychoanalytic interviews with a female patient with severe eczema and asthma. The 1st dream of the patient entering psychoanalytic therapy is considered the chief complaint of the unconscious. Relating the 1st dream is a tacit acknowledgment by the patient of the analysis and state. A verbatim recording of the patient's 1st dream was reassociated during 3 yr. of analysis. Verbatim recordings of Interviews 4, 81, 292, and 410 are presented and discussed from the viewpoints of chief complaint of the unconscious, regression, negative transference, and termination of the analysis. An assessment index of improvement is presented based on the material available in all 4 interviews. The patient, 15 yr. after the termination of therapy, still retains the improvement in adaptive ego revealed in Interview 410.—*Journal abstract.*

10943. Andronico, Michael P., et al. (Hunterdon Medical Center, Flemington, N.J.) **Case conference: A psychotherapeutic aide in a Headstart program: I. Theory and practice. II. Commentary.** *Children*, 1969(Jan), Vol. 16(1), 14-22.—6 emotionally disturbed children were treated by a nonprofessional neighborhood worker trained in the principles of Rogerian play therapy; behaviors ranged from uncontrollable to withdrawn. Each child was seen twice weekly for 16 wk. for 30-min therapy sessions. All 6 showed improvement, informally measured. An illustrative case of a withdrawn 4-yr-old girl, along with follow-up report, is presented. Discussants mention the necessity of investigating organic difficulties prior to initiating therapy and mention other problems and cautions regarding therapy. Much of the commentary deals with a debate of "filial therapy" (mothers treat own children in play situations), and the framework used for training the neighborhood worker mentioned above. Criticized also is the lack of an adequate theoretical base for the therapy used, and the lack of a continuous training program and of on-the-job supervision provided the worker. It is noted that play therapy is not always best for disturbed, disadvantaged children from urban ghettos. It is suggested that this article should be used as stimulation for thinking about using lay workers in Head Start programs, rather than as model for their use.—*D. T. Lekarczyk.*

10944. Boucher, Michael L. (Syracuse U.) **Effects of non-verbal communication on attraction and disclosure in a psychotherapy analogue.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6891.

10945. Brandon, Sydney. (U. Manchester, England) **Crisis theory and possibilities of therapeutic intervention.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(54), 627-633.—Crisis theory holds that personality is a dynamic equilibrium, with coping mechanisms adaptable to most life situations. Potentially insoluble challenge disturbs the balance, produces fluidity and disorganization, and increases the potential for change,

patients with reactions. Informed consent, screening, setting and follow-up were lacking in many cases, and the professional affiliations of the group leaders were uncertain. It is concluded that these data suggest that patients should be cautioned about participation in T groups.—*Journal abstract.*

10959 Kay, D. W., Fahy, Thomas, & Garside, R. F. (Royal Victoria Infirmary, Newcastle upon Tyne, England) A seven-month double-blind trial of amitriptyline and diazepam in ECT-treated depressive patients. *British Journal of Psychiatry*, 1968(Dec), Vol. 117(541), 667-671.—In a trial with 132 depressives advantages of using amitriptyline rather than diazepam were shown on rating scales, and in fewer suicides, less requirement for continued shock therapy, and fewer failures to improve. However, side effects were unpleasant.—*R. L. Sulzer.*

10960. Kubie, Lawrence S. (Sheppard & Enoch Pratt Hosp. Towson Md.) The destructive potential of humor in psychotherapy. *American Journal of Psychiatry*, 1970(Jan), Vol. 127(7), 861-866.—Asserts that the use of humor by the psychiatrist is potentially destructive to the psychotherapeutic relationship. Sometimes experienced therapists can use humor without doing harm, but beginning therapists who imitate them may do irreparable damage. Too often the patient's stream of feeling and thought is diverted from spontaneous channels by the therapist's humor; it may even be arrested and blocked. Toward the end of successful therapy, as a patient gradually achieves a progressively deeper self-understanding, gentle and sympathetic humor can sometimes help him to mobilize a determination to utilize his new insights so that he can limit, control, and guide the symptomatic expression of what remains of the neurotic process.—*Journal abstract.*

10961. Marks, Isaac. (Bethlem Royal & Maudsley Hosp. London, England) The future of the psychotherapies. *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 69-73.—Current trends include the application of different psychotherapeutic techniques to selected kinds of problems, refinement into more specific terms of research questions, more attention being paid to the relative therapeutic ingredients of each technique, and a shift from single general theories about psychiatric disorder to multiple lower order ones. Future training should be more efficient, perhaps employing intensive brief training in sensitivity-type groups in place of long analyses, and training will be more broad based than the psychiatrist knowledge of allied disciplines such as ethology and clinical psychology. (19 ref.)—*R. L. Sulzer.*

10962. Meissner, W. W. (Massachusetts Mental Health Center, Boston) Notes on identification: II. Clarification of related concepts. *Psychoanalytic Quarterly*, 1971, Vol. 40(2), 211-302.—Attempts "to clarify some of the concepts involved in the understanding of identification processes. [It considered are] related concepts of internalization externalization, imitation, identification, introjection projection, as well as the concept of identification." The distinctiveness of these processes and their interrelationships are discussed.—*J. L. Hill.*

the case study of an antisocial male adolescent with aggressive, rebellious, and anti-Semitic behaviors and the resulting legal and psychotherapeutic problems.—*H. A. Euler.*

10964. Olsen, Edward H. (Marquette U., Medical School) The marriage: A basic unit for psychotherapy. *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 945-948.—Marriage is a basic system in which most adults attempt to satisfy their needs for unification and autonomy. The psychotherapist is believed to be more effective working with an existing system than establishing a competing dyadic relationship with 1 of the spouses. He can help each individual differentiate and also facilitate the couple's capacity for a productive, satisfying intimacy. A case report is included. *Journal abstract.*

10965. Porter, Ruth. (Ed.) The role of learning in psychotherapy: A Ciba Foundation symposium. Boston, Mass.: Little, Brown, 1968, xi, 340 p. Presents a series of papers delivered at the 1968 Ciba Foundation symposium on the role of learning in psychotherapy. Topics covered include ethology, validation of results of psychotherapy, learning techniques in education and treatment, and prospects for the future. Discussions following presentation of each paper are included.

10966. Rhodes, Roy G. (Indiana U.) Measuring change in short-term psychotherapy using the Sixteen Personality Factor Questionnaire as the instrument. *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6412.

10967. Roberts, F. J. (U. Bristol, England) Conjoint marital therapy and the Prisoner's Dilemma. *British Journal of Medical Psychology*, 1971(Mar), Vol. 44(1), 67-73.—Presents the case of a couple successfully treated by conjoint marital therapy. An attempt is made to apply games theory to marriage, and more particularly the Prisoner's Dilemma game to communications between marital partners.—*A. C. Bower.*

10968. Rozhnov, V. E. Spetsial'nye voprosy psikhoterapii. [Special problems in psychotherapy.] In A. I. Biblin (Ed.), "Pervaya Vsesoyuznaya konferentsiya po problemam meditsinskoi deontologii." (See PA, Vol. 46 Issue 5) 41-50.—Discusses (a) hetero- and auto-suggestive factors in the therapeutic effect of "rational therapy, activating methods, suggestion in the awake state and in hypnosis, autogenic training or the relaxation method, etc." (b) problems in hypnotherapy, (c) psychotherapy in medical psychology, and (d) training in psychotherapy among the medical personnel.—*J. D. London.*

10969. Schildeberg, Melitta. (199 Gloucester Place, London, England) A contribution to the history of the psycho-analytic movement in Britain. *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 61-68.—From 30 yr. of the closest possible contact with the world's leading psychoanalytic centers, the author feels that there is something fundamentally wrong with analysis and analysis. The history of the various analytical societies shows the splits, disillusionment and friction among the analysts just as objective recording of therapeutic success reveals far too many bad stories. Even in the United States the trend may be away from once glamorous psychoanalysis and toward recognition of the greater importance of the therapist's positive personality, intuition and warm concern for the patient, as opposed to some special theory and training.—*R. L. Sulzer.*

10970. Silverman, Martin A. (State U. New York, Downstate Medical Center, Brooklyn) **The growth of logical thinking: Piaget's contribution to ego psychology.** *Psychoanalytic Quarterly*, 1971, Vol. 40(2), 317-341.—Reviews the contributions of Piaget in the study of the development of logical thinking in the child. "Although Piaget does not address himself to the conflict situations that are the psychoanalyst's main concern, he has conducted careful research into an area of ego development that is of great theoretical and clinical import. His precise mapping out of the epigenetic sequences in the development of thought and cognition has made available to the psychoanalyst a collection of very valuable developmental data that deserves serious attention... it can be said that the painstaking researches of Piaget and his co-workers have yielded data of inestimable value to the psychoanalytic investigator."—J. Z. Elias.

10971. Socarides, Charles W. (Albert Einstein Coll. of Medicine, Yeshiva U.) **On disillusionment: The desire to remain disappointed.** *British Journal of Medical Psychology*, 1971(Mar), Vol. 44(1), 35-44.—Presents theoretical and clinical data relating to the affect of disillusionment in order to further develop the psychoanalytic theory of affect. (26 ref.)—A. C. Bower.

10972. Stevens, Barbara. **The psychotherapist and women's liberation.** *Social Work*, 1971(Jul), Vol. 16(3), 12-18.—Analyzes the role of women in this society and the problems that stem from the oppressive division of sex roles. Insight into the sociopolitical roots of these problems is presented. The existence of inborn causes is denied. Implications for psychotherapy are discussed, with emphasis on the therapist's values and attitudes toward female patients. The case history of a young woman recently separated from her alcoholic husband is presented to illustrate issues discussed.—*Journal abstract*.

10973. Stone, Leo. **Reflections on the psychoanalytic concept of aggression.** *Psychoanalytic Quarterly*, 1971, Vol. 40(2), 195-244.—Views "the phenomenon of aggression, and its psychological functions and representations, as the aggregate of diverse acts, having diverse origins, and bound together, sometimes loosely, by the nature of their impact on objects rather than by a demonstrably common and unitary drive. In psychic development, the indispensable components of wish, intention, or purpose are secondarily assimilated to the consequences. This does not mean that certain elements of aggression do not have an instinctual origin or affiliation; nor... [is] the existence of a latent drive to die (pragmatically considered) [denied], even if... [this] view of such a drive and its relationship to aggression differs from that proposed by Freud." (91 ref.)—J. Z. Elias.

10974. Szasz, Thomas S. (State U. New York, Upstate Medical Center, Syracuse) **Justice in the therapeutic state.** *Comprehensive Psychiatry*, 1970(Sep), Vol. 11(5), 433-444.—The writings of Benjamin Rush articulate the principles of the therapeutic state in which the citizen-patient's conduct is governed by the clinical judgment of the medical despot. The goal of the therapeutic state is unfailing relief from suffering. Conflict is removed by therapy imposed by the state, using force if necessary. The behavioral technologist seeks the destruction of law and justice and their replacement by science and therapy. In the therapeutic state, justice will cease to exist or be redefined as treatment. (22 ref.)—D. Prager.

10975. Toussieng, Povl W. (U. Oklahoma, Medical School, Oklahoma City) **Child psychotherapy in a new era.** *American Journal of Orthopsychiatry*, 1971(Jan), Vol. 41(1), 58-64.—The goals and techniques of the industrial era are quickly becoming anachronisms in the computer era. It is insensible to still use the standards from the now defunct industrial era to weigh and appraise the effectiveness of a child's psychological make-up and functioning in the computer era. It is suggested that current models of "the mentally healthy child" be dispensed with, and children be actively involved in setting the goals for any therapeutic intervention on their behalf—even to letting them decide whether any help is needed at all.—*Journal abstract*.

10976. Work, Henry H. & Anderson, Hans. (U. California, Medical School, Los Angeles) **Studies in adoption: Requests for psychiatric treatment.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 948-950.—Observes that parents of adopted children frequently seek psychiatric treatment for them. A study of 419 children at a neuropsychiatric institute confirms this finding. It is proposed that certain patterns of child rearing among adoptive parents contribute to their adopted children's difficulties.—*Journal abstract*.

10977. Zetzel, Elizabeth R. **A developmental approach to the borderline patient.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 867-871.—Proposes that the diagnosis of the borderline patient involves distinctions between (a) unresolved intrapsychic conflict, (b) regressive changes attributable to a period of serious developmental or situational stress, and (c) significant failure to establish certain basic ego functions. Treatment involves considerable activity and structure by the therapist to help the patient utilize a realistic doctor-patient relationship. Borderline patients are seldom capable of tolerating the painful affect integral to the emergence of regressive transference reactions. Despite this and other limitations, many borderline patients are capable of maintaining a high degree of adaptation, provided the therapist remains available to them in a limited manner for an indefinite period.—*Journal abstract*.

Therapeutic Process

10978. Angel, Klaus. **Unanalyzability and narcissistic transference disturbances.** *Psychoanalytic Quarterly*, 1971, Vol. 40(2), 264-276.—Discusses the problems involved in the psychoanalysis of certain patients who fight transference. "Examples are given of 5 patients with widely different symptomatology and character. They have in common certain manifestations of the primal transference, leading to a transference resistance; they insist on being cured by receiving real love from an omnipotent analyst. This primal transference resistance is thought to be unanalyzable if there is loss of the transference illusion. The question is raised whether unanalyzability in general is due to an unanalyzable primal transference."—J. Z. Elias.

10979. Crowder, James E. (Michigan State U.) **Transference, transference dissipation, and identification in successful vs. unsuccessful psychotherapy.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6894-6895.

10980. Gurman, Alan S. (Teachers Coll., Columbia U.) **Rating of therapeutic warmth and genuineness by untrained judges.** *Psychological Reports*, 1971(Jun),

Vol. 28(3), 711-714.—Presented typescripts of therapy segments representative of the Truax Warmth and Genuineness scales to 20 female elementary school teachers for rank ordering on the dimensions of acceptance-rejection and genuineness-falseness. Correlations between rankings and the Truax criteria for warmth were generally positive and moderately high, with an over-all positive r , whereas r with genuineness was generally low and negative, with an over-all low positive value. Vocal cues influenced ratings of genuineness more than those of warmth, and verbal style influenced judgments of warmth more than those of genuineness. Comparisons are made with previous studies of naive judges' ratings of empathy. Implications for therapeutic practice are discussed.—*Journal abstract.*

10981. Kawakami, Norio. (Kyoto U., Japan) **GSR and plethysmographic changes during different modes of reference to experiencing: An experimental approach to psychotherapeutic process.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Sep), Vol. 13(2-3), 121-129.—Recent studies have emphasized the feeling process as a common phenomenon during psychotherapy. Most theories, however, describe the phenomenon only metaphorically. The present study investigated the relation between experimentally produced degrees of reference to experiencing and degrees of physiological tension. It was intended that the significance of experiencing theory for psychotherapy be clarified. Ss were 32 male and female students. Photoplethysmographic and GSR changes were recorded under 8 different types of instructions. Possible conditions to elicit the different results obtained are suggested. (15 ref.)—*R. D. Nance.*

10982. Sandler, J., Dare, C., & Holder, A. (Inst. of Psychiatry, London, England) **Basic psychoanalytic concepts: IX. Working through.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 617-621.—For Freud, working through represented the work entailed in overcoming resistances to change due to the tendency for the instinctual drives to cling to accustomed patterns of discharge. After uncovering conflicts and resistances, analytic work called working through was required to pass from mere intellectual insight to actual change. The concept is descriptive of a clinical process but not the only factor determining whether or not change follows interpretation or insight. Reinforcement and reward are necessary to accomplish learning but are seen to occur best after the therapeutic process labeled working through. (29 ref.)—*R. L. Sulzer.*

10983. Sandler, J., Dare, C., & Holder, A. (Inst. of Psychiatry, London, England) **Basic psychoanalytic concepts: X. Interpretations and other interventions.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 53-59.—The analyst invites the patient to talk to him, listens, and through largely unconscious perceptual processes, comes to understand the deeper meaning of the patient's material. Interpretation includes comments and other verbal interventions which have the aim of making the patient aware of some aspect of his psychological functioning of which he was not previously conscious. Therapeutic change as a consequence of analysis depends, to a large degree, on provision of a structured and organized conceptual and affective framework within which the patient can place his growing understanding of himself and his subjective experience of himself and others. (40 ref.)—*R. L. Sulzer.*

10984. Simon, Justin; Fink, Geraldine, & Endicott,

Noble A. (State U. New York, Downstate Medical Center, Brooklyn) **A study of silence in a recorded analysis.** *Journal of the Hillside Hospital*, 1967(Jul), Vol. 16(3-4), 224-233.—Presents a preliminary report of research on a recorded psychoanalysis. The analysis of an obsessional woman is being conducted utilizing classical technique, and the sessions are audio-recorded. The report concerns the manifestation of certain speech disruptions and silence measured under different conditions of resistance. Data support the hypothesis that shifts in the balance of resistance forces are meaningfully reflected in shifts of speech disruption measured as silence. There is suggestive confirmation of the hypothesis that speech disruption is a preferred manifestation of resistance arising from conflicts which are mobilized in the transference neurosis. (27 ref.)—*S. R. Diamond.*

Group Therapy

10985. Abroms, Gene M., Fellner, Carl H., & Whitaker, Carl A. (U. Wisconsin, Medical School) **The family enters the hospital.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1363-1370.—Presents a preliminary report of 18-mo full-time inpatient treatment of 100 patients and their families. Although a therapeutic impasse dictated most family admissions, the index Ss improved as much as nonfamily-patient controls. The fact of family admission was a powerful therapeutic act in itself. Because the program was intense and short-term, it gave little opportunity for Ss to regress. A discussion of results is meant to be only suggestive and preparatory to an adequately controlled investigation. More use of this type of treatment and less of the customary "dilute" outpatient care is recommended.—*Journal abstract.*

10986. Aponte, Joseph F. (U. Kentucky) **Group systematic desensitization: A test of the counter-conditioning hypothesis with cognitive and emotional modes of test anxiety.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6251.

10987. Bell, Robert L. (Veterans Administration Hosp., Houston, Tex.) **Practical applications of psychodrama: Systematic role-playing teaches social skills.** *Hospital & Community Psychiatry*, 1970(Jun), Vol. 21(6), 189-191.—Describes a technique in which systematic role-playing was used to give patients experience in appropriate social behavior. No rigid or standardized procedures were employed, but several helpful procedures are suggested. Some of these include (a) consideration of the types of social skills a patient needs to develop most, (b) informal meetings to facilitate socialization, (c) little concern for patient dynamics, (d) role-reversal techniques, (e) homework tasks, (f) limiting the group to 12 members, and (g) choosing staff members who feel comfortable with role-playing.—*P. Hertzberg.*

10988. Bernstein, Norman R. & Tinkham, Caroline B. (Harvard Medical School, Boston, Mass.) **Group therapy following abortion.** *Journal of Nervous & Mental Disease*, 1971(May), Vol. 152(5), 303-314.—Describes the authors' experiences in forming and conducting "short-term group therapy with single and married women who had obtained therapeutic abortions." Issues discussed included their own attitudes and those of professionals toward abortions, sex, guilt, and women's rights. "The groups served to reduce guilt, to enhance assimilation of the experience, and helped put the

experience into proportion for its members." It is suggested that groups of this type can be of value for both therapy and research. (24 ref.)—*R. Denis.*

10989. **Dean, Stanley R.** (U. Florida, Medical School) **The role of self-conducted group therapy in psychorehabilitation: A look at Recovery, Inc.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 934-937.—Self-conducted therapeutic clubs fill a need in psychorehabilitation. The emotional climate of the group, its contagiousness, and the opportunity to share with and help others are constructive forces. Against these must be weighed the disadvantages, i.e., the lack of records and adequate follow-up, inadequate screening of new members, limited leadership training, risk of delay in treating serious illness, high dropout rates, and lack of professional or legal regulatory restraints. As a practicing psychiatrist, the author has referred approximately 200 patients over a 20-yr period to Recovery, Inc. for assistance concurrent with his own treatment. He reports that these patients have shown better progress than those who did not participate. (19 ref.)—*Journal abstract.*

10990. **Goldstein, Steven R.** (Temple U.) **Differential effects of physical and nonphysical encounter group techniques on dimensions of self-esteem, interpersonal relations and defense.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6257.

10991. **Grosz, Hanus J. & Wagoner, Robert.** (Indiana U., Medical Center, Indianapolis) **MMPI and EPPS profiles of high and low verbal interactors in therapy groups.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 951-955.—Recorded the frequency of verbal interactions between 184 male psychiatric patients in 4 open therapy groups. Frequency was negatively correlated with scores on the MMPI L and K scales and the EPPS Order scale, and positively correlated with the MMPI Ma scale and the EPPS Aggression scale. Results indicate (a) that patients who score high on defensiveness are unlikely to interact with other group members as often as patients who score low; and (b) patients whose test results show them to be forceful, vigorous, aggressive, and candid are likely to interact with other group members more often than are patients who score low on these personality traits. Findings are discussed in the light of previous investigations and with reference to their possible practical usefulness to group therapists. (17 ref.)—*Journal abstract.*

10992. **Hanson, Philip G., Rothaus, Paul; O'Connell, Walter, & Wiggins, George E.** (Veterans Administration Hosp., Houston, Tex.) **Some basic concepts in human relations training for patients.** *Hospital & Community Psychiatry*, 1970(May), Vol. 21(5), 137-143.—Describes the goals and experiences of a human relations training laboratory in operation for 8 yr. whose purpose is to make patients examine their own relationships and develop self-awareness. Candidates are any kind of psychiatric patient with sufficient motivation. The laboratory involves 2 basic processes: learning (change) and democratic milieu (participative involvement). The former takes place on 2 levels—thinking and feeling—while 2 mental mechanisms that influence Ss to learn and change have been identified—identification and internalization. Experience with approximately 1500 Ss showed improvement on a variety of measures, but the improvements were attenuated in a 9-mo follow-up.—*P. Hertzberg.*

10993. **Williams, Robert L. & Gasdick, Jane M.** (Jefferson Barracks, Veterans Administration Hosp., St.

Louis, Mo.) **Practical applications of psychodrama: An action therapy for chronic patients.** *Hospital & Community Psychiatry*, 1970(Jun), Vol. 21(6), 187-189.—Describes the use of psychodrama as part of a multidimensional rehabilitation program for long-term patients, especially designed to teach Ss with a low level of functioning. 20 men and women who had been hospitalized for an average of 10 yr. took part in a 9-mo psychodrama session. Experiences, problems, and useful techniques are related. As Ss developed scene and role-played, the responsibility for handling delusional material presented by a protagonist was given to the group. 10 Ss were placed on terminal level for 1-10 mo. following the therapy. Psychodramatic techniques are believed to facilitate the learning of new attitudes and behaviors.—*P. Hertzberg.*

Behavior & Conditioning Therapy

10994. **Boer, Arend P.** (U. South Dakota) **Toward preventive psychotherapy: Experimental reduction of psychophysiological stress through prior behavior therapy training.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6890.

10995. **Brown, Herbert A.** (State U. New York, Stony Brook) **Systematic desensitization: Counterconditioning or expectancy manipulation?** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6253.

10996. **Calef, Ruth A.** (Southern Illinois U.) **The role of hierarchy, relaxation, and focussing variables in the modification of test anxiety.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6253.

10997. **Cautela, Joseph R. & Wisocki, Patricia A.** (Boston Coll.) **Covert sensitization for the treatment of sexual deviations.** *Psychological Record*, 1971(Win), Vol. 21(1), 37-48.—Presents a detailed procedural description of covert sensitization applied to the treatment of various maladaptive sexual behaviors. Covert sensitization is described to the patient as an aversive conditioning technique in which he, in imagination, pairs the pleasurable object within a noxious setting with the image of himself vomiting on himself, the sexual object, and every aspect of the stimulus situation. Empirical support for the technique is reported. The use of other procedures in conjunction with covert sensitization, the providing of alternate modes of behavior, and the possibility of aversion generalization are discussed. (60 ref.)—*Journal abstract.*

10998. **Connor, William H.** (U. Wisconsin) **Counterconditioning of state anxiety by brief muscle relaxation training: A psychophysiological study.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6893.

10999. **Edelman, Robert I.** (Florida Technological U., Orlando) **Operant conditioning treatment of encopresis.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 71-73.—Treated a 12-yr-old girl with a history of chronic encopresis by periods of isolation as a punishment for fecal soiling, and later, in addition, by relieving her of dishwashing when she did not soil. The undesirable behavior virtually ceased after 41 wk. of this management in the home situation. There was no evidence of symptom substitution, and there were indications of enhanced academic and interpersonal performance. At a 3-mo follow-up the improvement was reported to have been maintained.—*Journal abstract.*

11000. Fishman, Steven T. (U. Missouri) **Systematic desensitization of interpersonal social anxiety and the effects of suggestion upon its outcome.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6255.

11001. Friedman, D. E. & Lipsedge, M. S. (St. Bartholomew's Hosp., London, England) **Treatment of phobic anxiety and psychogenic impotence by systematic desensitization employing methohexitone-induced relaxation.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 87-90.—Reports the results of behavior therapy using systematic desensitization with methohexitone-induced relaxation in 124 patients with phobic anxiety states. The disorders included social anxieties, monosymptomatic and heterosexual phobias, and the agoraphobic syndrome. After a mean period of 19.4 mo. (range 6 mo. to 5 yr.), 47 patients (38%) were symptom free, 63 (51%) were improved, and only 14 (11%) showed no change. (15 ref.)—*Journal summary*.

11002. Johnson, James M. (State University Coll. New York, Plattsburgh) **Using parents as contingency managers.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 703-710.—Instructed the parents of a 9-yr-old boy and an 11-yr-old girl on how to eliminate the disturbing behaviors of their children during the dinner meal. A combination of extinction and avoidance procedures was used to reduce the noisy responses by the children, and, subsequently, a fading technique was used to adjust the food preferences. The program was carried out entirely by the parents; the children were never seen by E. The target behaviors were modified after 20 sessions under the 2 contingencies. Problems encountered while instructing the parents in behavioral techniques are discussed.—*Journal abstract*.

11003. Lane, Robert G. & Domrath, Richard P. (Wisconsin State U., Oshkosh) **Behavior therapy: A case history.** *Hospital & Community Psychiatry*, 1970(May), Vol. 21(5), 150-153.—Describes the case of a 33-yr-old self-mutilating, mentally retarded male to illustrate a constructive approach using positive behavior-modification procedures. Coffee was used as a positive reinforcer in fixed and random interval schedules to eliminate an undesirable behavior (pulling out fingernails). Problems encountered in initiating a behavior-modification program and the attitudes of hospital personnel are discussed.—P. Hertzberg.

11004. Layne, Carl C. (Southern Illinois U.) **The effect of suggestion in implosive therapy for fear of rats.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6261-6262.

11005. Leaf, William B. & Gaarder, Kenneth R. (Prototypes, Inc., Kensington, Md.) **A simplified electromyograph feedback apparatus for relaxation training.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 39-43.—Describes external electronic feedback techniques which provide the closing link in a control loop enabling an S to alter his own psychophysiological variables. Control of muscle tension with the feedback EMG gives an improved method of achieving deep relaxation for behavior therapies. Design alternatives involving input coupling, noise level, display method, sensory modality to be stimulated, scoring methods, and safety features are considered in trying to arrive at an optimal instrument. (15 ref.)—*Journal abstract*.

11006. McCallum, Robert N. (U. Missouri) **The modification of cigarette smoking behavior: A com-**

parison of treatment techniques. *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6264.

11007. McGlynn, F. Dudley; Reynolds, E. Joyce, & Linder, Lowell H. (Mississippi State U.) **Experimental desensitization following therapeutically oriented and physiologically oriented instructions.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 13-18.—Assigned 39 female undergraduates with a fear of mice (selected by scores on the Behavioral Avoidance Test) to 1 of 4 groups and instructed them that they were (a) studying a form of therapy (Group A), (b) studying the relationship of heart rate to fear (Group B), and (c) studying the relationship of heart rate to various mental images (Group C). Group D received no treatment. Groups A, B, and C received relaxation training, while Groups A and B received identical analogue desensitization training. Groups A and B showed significant ($p < .01$) improvement over Groups C and D. No significant differences were found between the 2 treatment groups or between the 2 control groups. Results do not support the concept of a "therapeutic set" found in previous studies.—S. Knapp.

11008. Riebold, Floyd E. (Texas Technological U.) **The effectiveness of programmed material as a method for assisting parents in regulating consummatory behavior in children.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6267-6268.

11009. Sopina, Mary V. (U. Arizona) **Self concept changes in adolescents following behavior modification.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6268-6269.

11010. Stark, James E. (U. Georgia) **The comparative efficacy of three behavior modification techniques in the treatment of interpersonal anxiety.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6914.

11011. Stedman, James M., Peterson, Travis L., & Cardarelle, James. (U. Texas, Medical School, San Antonio) **Application of a token system in a pre-adolescent boys' group.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 23-29.—Describes group therapy with preadolescents as presenting an excellent opportunity to employ operant conditioning principles. Procedures used in establishing an operant approach in a group of 8 10-12 yr. old hostile-aggressive boys are described. Quantitative data and qualitative observation indicate that operant techniques are successful in increasing the rate of prosocial responses and decreasing deviant behavior.—*Journal abstract*.

11012. Stephen, Louis S. (U. New Mexico) **Subject-experimenter relationship influence on habit modification.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6306.

11013. Stuart, Richard B. (U. Michigan) **Behavioral contracting within the families of delinquents.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 1-11.—Describes the use of behavioral contracting to strengthen the control of family and school over the behavior of delinquents. A behavioral contract is defined as a means of scheduling the exchange of positive reinforcements among 2 or more persons. The use of these contracts is predicated upon 4 assumptions: (a) receipt of positive reinforcements in interpersonal exchanges is a privilege rather than a right; (b) effective interpersonal agreements are governed by the norm of reciprocity; (c) the value of an interpersonal

exchange is a direct function of the range, rate, and magnitude of the positive reinforcements mediated by that exchange; and (d) rules create freedom in interpersonal exchanges. The use of a behavioral contract with a 16-yr-old delinquent girl is described and analyzed using Markovian methods. (25 ref.)—*Journal abstract*.

11014. Tenbrunsel, Thomas W., Lottman, Thomas J., Coby, William F., & Oziel, Leon J. (Capitol Area Comprehensive Health Planning Assoc., Lansing, Mich.) **A group token program for the education of the mentally ill.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 743-746.—Established a group token program to increase motivation, participation, and involvement within the framework of an activities therapy adult education program. The structure of the program consisted of 4 semiautonomous groups of 8-10 mental patients within a token economy system. Pre- and posttreatment measures of group problem solving and social interaction were taken, using the Group Task Puzzles and the Social Activity Scale. Significant differences in amount of communication in both situations were found between the pre- and posttreatment groups. No significant differences in rate of group problem solving were noted. Implications for future research in program development are discussed.—*Journal abstract*.

11015. Tyler, John D. (U. Texas) **Fear extinction using a reciprocal inhibition technique.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6914-6915.

11016. Wark, David M. (U. Minnesota) **An inexpensive apparatus for desensitization by recorded tape.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 37-38.—Describes the use of portable cassette tape recorders for desensitization. The apparatus consists of 2 tape recorders, tapes of hierarchy scenes and relaxation instructions, and remote control switches. Several uses for the equipment are outlined.—*Journal abstract*.

11017. Wolpe, Joseph & Theriault, Norman. (Temple U., Medical School) **Francois Leuret: A progenitor of behavior therapy.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 19-21.—Discusses Francois Leuret, a French physician. During the 1st half of the 19th century without the benefit of experimental models, this doctor treated psychiatric patients by directly attempting to change their habits. His viewpoint is expressed in excerpts from his writings, and some of his therapeutic methods are delineated.—*Journal abstract*.

Special & Adjunctive Therapy

11018. Bartlett, Esther E. (181 Adams St., Quincy, Mass.) **The use of hypnotic techniques without hypnosis per se for temporary stress.** *American Journal of Clinical Hypnosis*, 1971(Apr), Vol. 13(4), 273-278.—Hypnotic techniques utilize normal, simple, natural methods to modify or control inappropriate behavior by suggestion, without the formal induction of hypnosis. They are uniquely suitable for any patient's needs in any type of temporary stress.—*M. V. Kline*.

11019. Bigelow, Newton & Ruben, Peter. (Marcy State Hosp., N.Y.) **Music and milieu.** *Psychiatric Quarterly*, 1970(Jul), Vol. 44(3), 502-515.—Considers that music should be the main force in milieu treatment of the mentally ill. The use of lullabies and martial music to

symbolically represent mother-love and aggression to a 51-yr-old catatonic woman and the beneficial effects on the patient are noted. The combination of music and painting in the treatment of an 8-yr-old boy with feelings of rejection and abandonment is described. A music program which utilizes staff and patients in a state hospital is outlined. Case histories of a 28- and a 29-yr-old woman are presented to indicate the benefits of such a program. An appendix is included which lists the basic instrumentation and repertoire for a concert band, a stage band, a combo, and a chorus.—*S. Knapp*.

11020. Golan, Harold P. (77 Bay State Rd., Boston, Mass.) **Control of fear reaction in dental patients by hypnosis: Three case reports.** *American Journal of Clinical Hypnosis*, 1971(Apr), Vol. 13(4), 279-284.—Fear is 1 of the 4 basic drives in humans. Various case histories illustrate how hypnosis can aid in alleviating fear and ameliorating difficult operative situations.—*M. V. Kline*.

11021. Johnston, Edwin & Donoghue, John R. (U. Portland) **Hypnosis and smoking: A review of the literature.** *American Journal of Clinical Hypnosis*, 1971(Apr), Vol. 13(4), 265-272.—Reviews the use of hypnosis in the treatment of smoking. Although there are many clinical reports available, there is almost no good research evidence attesting to the effectiveness of hypnosis in the elimination of smoking behavior.—*M. V. Kline*.

11022. McAmmond, Diane M., Davidson, Park O., & Kovitz, David M. (U. Calgary, Alberta, Canada) **A comparison of the effects of hypnosis and relaxation training on stress reactions in a dental situation.** *American Journal of Clinical Hypnosis*, 1971(Apr), Vol. 13(4), 233-242.—Skin conductance and self-report anxiety of frightened dental patients were measured during a pain tolerance test and an anesthetic injection procedure. On the skin conductance measure, relaxation and hypnosis were more effective than control for highly aroused Ss.—*M. V. Kline*.

11023. Menapace, Robert H. & Lana, Robert E. (Temple U.) **Physical rehabilitation and attitudes of CVA and pulmonary patients.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 763-768.—Examined 28 cerebrovascular accident (CVA) inpatients and 28 pulmonary outpatients for attitudes toward hospital personnel and procedures, self, and sociopolitical issues. GSR records were taken during testing. The ensuing 4-6 wk. of rehabilitation therapy was conceived to be the attitude-influencing procedure. Ss were again given the attitude questions, and GSR recordings were taken. Results indicate that (a) the physical rehabilitation process did a better job in changing attitudes in a desirable direction regarding self-perception for CVA inpatients than the pulmonary outpatients; and (b) CVA inpatients became more skeptical than the pulmonary outpatients about hospital procedure and personnel, though the latter displayed a reduction in tension about the attitude assessment.—*Journal abstract*.

11024. Patch, Vernon D. & Refsnes, Carolyn C. (Harvard Medical School, Boston, Mass.) **An art class in a psychiatric ward.** *Bulletin of Art Therapy*, 1968(Oct), Vol. 8(1), 13-24.—Describes a weekly art class for psychiatric day care and hospital patients at a metropolitan city hospital. Illustrations of the patients' art work are presented, and their use in diagnosis and treatment discussed. Problems of integrating a new therapy into an existing therapeutic program are con-

sidered. It is suggested that benefits from art therapy can include (a) the provision of an organized group activity, (b) help for patients with problems of self-control through a structured class situation, and (c) the opportunity to identify patients who would benefit from individual art therapy. A discussion by Elinor Ulman is also presented.—*P. McMillan.*

11025. Perkins, Kenneth A. & Reyher, Joseph. (Minneapolis Clinic of Psychiatry & Neurology, Minn.) **Repression, psychopathology and drive representation: An experimental hypnotic investigation of impulse inhibition.** *American Journal of Clinical Hypnosis*, 1971(Apr), Vol. 13(4), 249-258. A hypnotically induced paramnesia involving hostile impulses was activated posthypnotically at 3 levels of conflict intensity by the tachistoscopic presentation of words related to the paramnesia.—*M. V. Kline.*

11026. Pflug, B. & Tölle, R. (U. Tübingen, Neuro-clinic, W. Germany) **Therapie endogener Depressionen durch Schlafentzug.** [Therapy for endogenous depression by means of sleep deprivation.] *Nervenarzt*, 1971(Mar), Vol. 42(3), 117-124. Sleep deprivation for 1 night was administered to 23 endogenous depressives, 11 neurotic depressives, and 23 normal Ss. For the endogenous depressives a significant therapeutic effect was obtained whose duration varied. For the neurotic depressives this effect was more weakly pronounced in that it occurred more irregularly. In 1 case a worsening was observed. Examination of circulation showed a rise in the systolic blood pressure of the ophthalmic artery after sleep deprivation for endogenous depressives but not for neurotic depressives and normal Ss. Sleep deprivation is recommended as a treatment for endogenous depression in its beginning stages as well as for thymoleptica resistance. The consequences for the treatment of depressive sleep disturbances and the meaning of the 24-hr rhythm for endogenous depression are discussed.—*E. R. Wist.*

11027. Pilowsky, I. & McGrath, M. D. (U. Sydney, New South Wales, Australia) **Effect of ECT on responses to a depression questionnaire: Implications for taxonomy.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 685-688. Administered to 45 depressives, a 57-item questionnaire produced evidence for the validity of depressive classes. The effect of ECT appeared, with responses to items considered related to endogenous depression, the most likely to change after treatment.—*R. L. Sulzer.*

11028. Vidart, Lionel. **Vers un thermalisme institutionnel en psychiatrie.** [Toward an institutional thermalism in psychiatry.] *Annales Médico-Psychologiques*, 1971(Jan), Vol. 1(1), 1-13.—Reviews the ancient and still useful "water cures" as they apply to the psychiatric patient. Treatment at a medically oriented spa consists of more than the hydrotherapy on which it is based, it is almost always combined with psychotherapy and training in relaxation methods by skilled instructors. Relaxation is regarded not as a panacea nor a simple byproduct of physical treatment methods, but more a discipline which must be acquired gradually. Many patients begin to benefit simply by removal to a thermal institution, away from perturbing family and occupational stress. Each must be prepared psychologically for the active steps to follow this interruption if he is to find himself again, taking as the point of departure the rediscovery of his own body and physical existence. The most successful treatment results are obtained with those

forms of anxiety which take a concrete form of the neurovegetative variety.—*H. E. King.*

Drug Therapy

11029. Aisa, Pilar & Díaz, Ana M. (San Francisco Xavier Psychiatric Hosp., Navarre, Spain) **Tratamiento endovenoso de las depresiones.** [Intravenous treatment of depressions.] *Archivos de Neurobiología*, 1969(Apr), Vol. 32(2), 209-217. Studied 38 Ss who were treated iv for various types of depression: (a) psychotic manic-depression, (b) periodic depression, (c) neurotic depression, (d) depression in schizophrenics, (e) reactive depression, (f) involuntary depression, and (g) psychorganic depression in the retarded. It is concluded that the results obtained with chlorimipramine are superior to all other antidepressants. It has an intense activity over all depressive symptoms, especially inhibition, anxiety, and anguish. There is a greater number of remissions when compared to other antidepressants. It is well tolerated and can be applied to different types of depression. Also, it is noted that chlorimipramine can replace electroshock therapy.—*A. M. Farlagha.*

11030. Bahr, F., Llanos, R., & Matusek, N. (Max Planck Inst., Munich, W. Germany) **Análisis clínico cuantitativo del efecto de la fenetilina (captagon) sobre los niños hiperquinéticos.** [Quantitative clinical analysis of the effect of fenetylillin (captagon) on hyperkinetic children.] *Revista de Neuro-Psiquiatria*, 1970(Sep), Vol. 33(3), 233-242. —10 hyperkinetic children were treated in a double-blind study with fenetylillin (captagon). The effect of the treatment was quantitatively estimated with a time recorder, a movement recorder, and a rating scale. The daily dosage was 50-150 mg. (1-3 tablets) except for 1 S who received a 205-mg dosage. During the hospitalization 6 Ss showed a substantial to very good improvement, 3 Ss were improved only in some aspects, and 1 S was found to be deteriorated. In addition to a decrease in motor activity, aggressive behavior also decreased. Furthermore, more patience, endurance, and emotional stability were observed. A too large dosage of fenetylillin led to loss of appetite and weeping. In 3 cases in which after a successful treatment the Ss were sent home, the therapeutic effects remained stable. (French & German summaries) (17 ref.)—*English summary.*

11031. Benady, D. R. (Child Guidance Clinic Shrewsbury, England) **Cyproheptadine hydrochloride (peractin) and anorexia nervosa: A case report.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 681-682.—A 12-yr-old girl with slow progressive weight loss, anorexia before onset of menstruation, and presence in the family of disturbed relatives showed improvement with cyproheptadine hydrochloride. No side effects were seen.—*R. L. Sulzer.*

11032. Benešová, O. (Charles U., Inst. of Pharmacology, Prague, Czechoslovakia) **Neurophysiological and biochemical aspects in the action of antidepressant drugs.** *Activitas Nervosa Superior*, 1970(Aug), Vol. 12(3), 226-234.—A review of the literature points to evidence that the monoamines play an important role in the treatment and in the pathogenesis of depression. A significant factor may be the ratio between single monoamines rather than the absolute value of any one of them. The significance of indolealkylamines (5-hydroxytryptamine) and their metabolism seems to increase. The interferences of

thymoleptics with the cholinergic transmission is still to be studied in detail. (47 ref.)—*H. Bruml.*

11033. **Bornstein, S., et al.** *Intérêt thérapeutique de l'hydrosarpan 711 dans les états dépressifs et la pathologie psychiatrique du présénium.* [Therapeutic interest of hydrosarpan 711 in depressive states and psychiatric pathology of the presenium.] *Annales Médico-Psychologiques*, 1970(Oct), Vol. 2(3), 433-444.—The problems brought about by insufficient cerebral circulation, which can appear well before a patient may be considered geriatric, have been treated by a variety of new drugs notable among which is hydrosarpan 711. This study reports its use with 73 patients, both hospitalized and ambulatory. Its efficacy for deficit states related to senility were confirmed and treatment was extended to patients with depressive, melancholic, or psychotic states in which classic therapies were contraindicated because of vascular problems. Progress was followed by clinical observation and psychometric testing (intelligence, memory, perceptual structure, and personality). A favorable result (86%) confirms the clinical findings reported by others. Particularly encouraging were the effects on ambulatory patients classed as presenile depressives with marked psychic weakness. Especially among overly driven responsible persons hydrosarpan 711 was found to exert a curative and sometimes preventive action.—*H. E. King.*

11034. **Brill, Leon & Chambers, Carl D.** (New York State Narcotic Addiction Control Commission, New York) *A multimodality approach to methadone treatment of narcotic addicts.* *Social Work*, 1971(Jul), Vol. 16(3), 39-51.—Describes a multimodality treatment program for narcotic addicts which is primarily geared to the goal of abstinence. The psychotherapeutic continuum serves to help those addicts who can benefit at a particular level and to screen those in need of more intensive treatment. Treatment includes inpatient or ambulatory detoxification, low-dose methadone, high-level variable dose methadone maintenance, and residential center living with methadone maintenance. Each level is described and a case example presented to illustrate various principles. It is concluded that such a multimodality approach makes a definite contribution to the rehabilitation of addicts who might not otherwise be reached by more limited programs.—*S. Knapp.*

11035. **Bunney, William E., Brodie, H. Keith; Murphy, Dennis L., & Goodwin, Frederick K.** (National Inst. of Mental Health, Lab. of Clinical Science, Bethesda, Md.) *Studies of alpha-methyl-para-tyrosine, L-dopa, and L-tryptophan in depression and mania.* *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 872-881.—Administered L-dopa and L-tryptophan, metabolic precursors of norepinephrine and serotonin, respectively, and alpha-methyl-para-tyrosine (α MPT), a blocker of catecholamine synthesis, to 34 depressed and manic Ss in an attempt to decrease their psychopathology and test the monoamine theory of affective disorders. L-dopa and α MPT clearly altered mood and thought patterns in some Ss, while L-tryptophan was less active. Analysis of urinary and cerebrospinal fluid amine metabolites documented the metabolic effects of the compounds during periods of behavioral change. (52 ref.)—*Journal abstract.*

11036. **Cramer, Bertrand.** (Medico-Pedagogical Center, Geneva, Switzerland) *Delusion of pregnancy in a girl with drug-induced lactation.* *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 960-963.—Presents

the case of a 15-yr-old psychotic girl who developed galactorrhea and a delusion of pregnancy while taking chlorpromazine. The delusion developed as a result of the interaction of the side effects of chlorpromazine and the psychological makeup characteristic of pseudocyesis patients. Galactorrhea and breast changes are often found among patients taking high doses of chlorpromazine and conflicts about pregnancy are frequent; thus delusions of pregnancy may often occur among female institutionalized patients treated with chlorpromazine. (20 ref.)—*Journal abstract.*

11037. **Crane, George E.** (Spring Grove State Hosp., Baltimore, Md.) *Persistence of neurological symptoms due to neuroleptic drugs.* *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1407-1410.

11038. **Dole, Vincent P., et al.** (Rockefeller U.) *Methadone poisoning: Diagnosis and treatment.* *New York State Journal of Medicine*, 1971(Mar), Vol. 71(5), 541-543.—The history of narcotic intake is important in establishing a diagnosis of methadone poisoning since the symptoms, apnea and coma, are nonspecific. Artificial respiration by the best means immediately available should be started without delay. Antidote of choice is naloxone hydrochloride (narcant), .01 mg/kg iv.; nalorphine hydrochloride (nalline), .1 mg/kg, is also an effective antidote. The patient should be continuously observed for 24 hr. and further im injections of antidote administered as necessary to maintain respiration. Lavage, dialysis, and CNS stimulants are contraindicated. The importance of secure custody of methadone must be emphasized by prescribing physicians.—*Journal abstract.*

11039. **Fouks, L.** *Les effets secondaires du moditen-retard.* [The secondary effects of Moditen-Retard.] *Psychopharmacologie*, 1970(Mar), 14-18.—Discusses secondary effects of the long-acting preparation fluphenazine enanthate. Effects include dysleptic effects from overdosage, e.g., passivity, obtundation, and depressive or confusional-oniric states. The drug can also produce neurological effects, e.g., the akinetic syndrome, or hypertonic and dyskinetic syndromes. Characteristics and management of these effects are discussed.—*W. W. Meissner.*

11040. **Gardiner, A. Quentin & Hall, David J.** (U. Aberdeen, Scotland) *Drug monitoring in a psychiatric unit.* *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 185-193.—For 307 patients, adverse effects such as skin rash, headache, vomiting, sweating, hypotension, confusion, memory loss, diarrhea, or laryngeal spasm, were most frequent with treatment by electroplexy, antidepressant drugs, and phenothiazines. Incidence of untoward events increased with the number of drugs administered, and women experienced more events than men. (17 ref.)—*R. L. Sulzer.*

11041. **Gayral, L.** *Conduite de la cure en milieu hospitalier.* [Management in the hospital setting.] *Psychopharmacologie*, 1970(Mar), 19-25.—Discusses principles of drug management and dosage scheduling in use of long-acting fluphenazine enanthate in the in-hospital treatment of psychotic patients. Effects of the drug on the course of symptoms in classical schizophrenia are described. Posthospitalization treatment is usually indefinite with a maximum remission of 3 yr.—*W. W. Meissner.*

11042. **Glick, Ira D., Hauptman, Bruce, & Klein, Donald F.** (U. California, Medical School, Berkeley) *Pseudopregnancy: Treatment of periodic psychiatric illness: A pilot study.* *Psychiatric Quarterly*, 1970(Jul),

Vol. 44(3), 403-407.—Conducted a pilot study on the use of high dosages of norethynodrel with mestranol (enovid) to produce a pseudopregnant state in treating the female patients with periodic psychiatric illness. "The rationale was to produce a kind of pseudopregnant state in the expectation that when treatment was stopped, fertility might be enhanced by the operation of compensatory mechanisms." 4 female 18-54 yr. old Ss received 10-mg enovid for 1 wk., with weekly increments of 10 mg. until 40 mg. was reached. The drug was then discontinued for a 2-wk period while Ss received a placebo and were observed for 1 mo. 2 Ss showed slight improvement, and 2 Ss were unchanged, with no increase in depression.—S. Knapp.

11043. Goldfield, Michael & Weinstein, Morton R. (Langley Porter Neuropsychiatric Inst., San Francisco, Calif.) **Lithium in pregnancy: A review with recommendations.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 888-893.—Reviews studies on the teratogenicity of lithium salts during pregnancy which reveal conflicting evidence. It is proposed that lithium therapy should be initiated during pregnancy only in severely manic women who are unresponsive to other therapy and for whom continuing manic behavior would jeopardize their own or their babies' lives. 6 cautions in the use of lithium during pregnancy are offered, including avoidance of diuretics and of salt restriction. In addition, the formation of an American Registry of Lithium Babies is announced. (22 ref.)—*Journal abstract*.

11044. Helmchen, H. & Kanowski, S. (Free U., Psychiatric & Neurological Clinic, Berlin, W. Germany) **EEG-Veränderungen unter Lithium-Therapie.** [EEG changes under lithium therapy.] *Nervenarzt*, 1971(Mar), Vol. 42(3), 144-148.—It is asserted that under lithium treatment the EEG is very frequently impressively and variously modified. The changes correspond qualitatively in large part to those phenomena observed under therapy with other psychopharmacological drugs. The finding raises a series of questions whose answers surmise that the practical difficulties of the method can be overcome in the future.—E. R. Wist.

11045. Jerí, F. R. (National U. of San Marcos, Lima, Peru) **El uso de haloperidol en la esquizofrenia residual y en los estados paranoides.** [The use of haloperidol in schizophrenic residual and paranoid conditions.] *Revista de Neuro-Psiquiatria*, 1970(Jun), Vol. 33(2), 114-122.—The odorless, colorless, and tasteless haloperidol concentrate was given to 7 patients, 6 schizophrenic and 1 paranoid. 6 Ss would not take any antipsychotic medication or accept ECS treatment. In 6 Ss haloperidol produced a complete social remission. In 1 it failed to avoid a relapse or to eliminate troublesome hallucinations. (French & German summaries) (16 ref.)—*English summary*.

11046. Jirgl, M., Drtil, J., & Čepelák, J. (Research Inst. of Penology, Prague, Czechoslovakia) **The influence of propericiazine on the behavior of difficult delinquents.** *Activitas Nervosa Superior*, 1970(May), Vol. 12(2), 134-135.—14 difficult delinquents were administered propericiazine (a form of neuleptil). Conspicuous improvement was observed as far as hostility, depression, and aggression were concerned, and moderate improvement was observed in emotional lability and thinking. There was a somnolence at the beginning of the treatment, in 2 patients there was also muscle rigidity and even cramps. Compared with other drugs which were tried before (phenothiazines, bromides, barbitu-

rates) the propericiazine was the most effective; the dosage was simpler and was more easily tolerated.—H. Bruml.

11047. Kondraschenko, V. T., Glants, B. R., & Maerovich, I. M. **Giperbaricheskaya oksigenoterapiya gipoksicheskikh sostoyanii pri ostrykh cherepno-mozgovykh travmakh i ostrykh ékzogenykh psikhózakh.** [Hyperbaric oxygenotherapy of hypoxic states in acute craniocerebral injuries and acute exogenic psychoses.] *Zhurnal Nevropatologii i Psikiatrii*, 1971(Feb), Vol. 71(2), 271-277.—Studied the effectiveness of oxygen therapy under high-pressure in acute cases of craniocerebral injury and exogenic psychosis, utilizing observations on 124 19-34 yr. old patients (63 with II-III degree concussion of the brain and 61 with acute psychoses of exogenic origin, i.e., CO poisoning and alcoholic psychoses), 29 of whom were treated with hyperbaric oxygen, 50 with oxygen under normal pressure, and 50 with oxygen in combination with other methods. Hyperbaric oxygen therapy was shown to be much more effective than mere inhalation in dealing with hypoxic states and is recommended for the treatment of psychoses accompanied by symptoms of hypoxia. (English summary) (28 ref.)—I. D. London.

11048. Kullander, N. E. (Central Hosp., Women's Clinic, Kristianstad, Sweden) **A double-blind clinical trial of a new sleep-inducing combination of methaqualone and etodroxizine compared with nitrazepam and placebo.** *Arzneimittel-Forschung*, 1969(Sep), Vol. 19(9), 1530-1532.—Isonox, a new sleep-inducing drug combination of methaqualone and 8-[4-(p-chloro-benzhydryl)-piperazin-1-yl]-3,6-dioxaoctan-1-ol (etodroxizine) was investigated in comparison with nitrazepam and placebo. The clinical value of isonox was shown with the double-blind method. Results are discussed and represented in a table and the sequential graphs. Ss consisted of 30 women from a gynecological ward, average age being 47.8 yr. Isonox proved to be significantly better than both placebo and nitrazepam. 2 Ss spontaneously expressed their view that this was the best sleep-inducing preparation they had ever tried. For 3 Ss it was too strong in the given dosage, indicating that in future clinical use 1 capsule might be tried instead of 2. Isonox has several advantages and is recommended for clinical use, especially when other therapy has failed. (23 ref.)—*Journal summary*.

11049. Lambert, P. A. & Marcou, G. **L'oenanthate de fluphenazine en traitement post-hospitalier.** [Fluphenazine enanthate in post-hospital treatment.] *Psychopharmacologie*, 1970(Mar), 26-32.—Presents details of administration and advantages of using the long-acting preparation of fluphenazine enanthate in the management of patients after discharge from the hospital for psychotic illness. Injections are given on biweekly basis. This involves ease of administration and better control over dosage, and the assurance that the medicine is being received by the patient. Parkinsonian-like side effects are seen in 20% of patients but are easily controlled with artane.—W. W. Meissner.

11050. Lewis, Wade H. (Santa Rosa Medical Center, San Antonio, Tex.) **Iatrogenic psychotic depressive reaction in hypertensive patients.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1416-1417.

11051. Malleon, Nicolas. (U. London, Research Unit for Student Problems, England) **Acute adverse reactions to LSD in clinical and experimental use in the United Kingdom.** *British Journal of Psychiatry*,

1971(Feb), Vol. 118(543), 229-230.—Surveyed experience with 49,500 LSD treatment sessions on 4,300 patients. Attendant suicide rate was .7/1,000, accident rate 2.3/1,000, and brief psychosis rate 9/1,000 patients. It is concluded that with adequate psychiatric supervision the incidence of such reactions is not prohibitive.—R. L. Sulzer.

11052. Mariátegui, J., Chávez, H., Butler, A., & Oballe, J. El clormetiazol en el tratamiento de síndromes ansiosos. [Chlormethiazole in the treatment of anxious syndromes.] *Revista de Neuro-Psiquiatria*, 1969(Dec), Vol. 32(4), 307-316.—Studied by clinical and statistical methods the effects of chlormethiazole, a derivative of thiamine on 20 male and female 18-60 yr. olds. 13 Ss suffered from anxious reaction, 4 from neurosis, and 3 from anxious-phobic reaction. After 4 wk. of treatment there was great improvement in 6 Ss, average improvement in 10, and minimum improvement in 4. Side effects were minimal and consisted of nasal congestion and dryness of mouth, drowsiness, weakness, and less frequently restlessness, and tension. It is concluded that chlormethiazole can be very useful where the predominant syndrome is anxiety. (English, French, & German summaries)—A. M. Farfaglia.

11053. Moffatt, W. R., Siddiqui, A. R., & MacKay, D. N. The use of sulthiame with disturbed mentally subnormal patients. *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 673-678.—A double-blind, crossover trial with 42 severely abnormal patients showed sulthiame to be an effective tranquilizer in reducing the incidence of disturbed behavior. The drug was effective with patients unimproved in previous administrations of pericyazine and chlorpromazine. No side effects appeared.—R. L. Sulzer.

11054. Muller, Yu. L. & Rabinovich, M. M. (Bekhterev Psychoneurological Inst., Leningrad, USSR) Sravnitel'naya otsenka deistviya uglekislogo litiya, galoperidola i preparata IB-503 pri lechenii maniaki i n'ykh sostoyaniy. [Comparative assessment of the action of lithium carbonate, haloperidol and the preparation IB-503 in the treatment of manic states.] *Zhurnal Nevropatologii i Psikologii*, 1971(Feb), Vol. 71(2), 277-283.—50 19-75 yr. old manic-depressives in the manic phase were Ss in a comparative study of the therapeutic action of the antimanic preparations: lithium carbonate, haloperidol, and IB-503 [4-(3-di-methylaminopropyliden, 1(9,10)dihydro-4H benzo(4,5)cycloheptate (1,2b) thiophen], which possesses a strong sedative and hypnotic action. 23 Ss were treated with lithium carbonate, 17 with haloperidol (6 in subsequent combination with lithium carbonate), and 10 with IB-503. Ratings of effectiveness were undertaken by the use of graduated scales of judged degree of various disturbances. Lithium carbonate produced an almost uniform reduction of all components of the manic syndrome; haloperidol had a stronger effect on motor activity and irritability, and a somewhat lesser effect on mood and rapidity of thought processes; and IB-503 exerted an effect primarily on motor activity. The action of lithium carbonate was assessed to be the most specifically antimanic. (English summary) (21 ref.)—I. D. London.

11055. Pan, Lynn; Shoenberg, Elisabeth, & Joyce, C. R. (Box 242, Jesselton, Sabah, Malaysia) Relationship between taste threshold for drugs and clinical progress in a mixed group of psychiatric patients. *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541),

653-659.—Studied the relationships between taste threshold for 4 psychotropic drugs—fluphenazine, trifluoperazine, amitriptyline and imipramine—and clinical outcome in 40 psychiatric patients. Results indicate that Ss showed higher taste thresholds than did 20 controls, and thresholds were reduced as clinical state improved. Relative threshold for an individual patient failed to predict the degree of success in use of that drug.—R. L. Sulzer.

11056. Pilipenko, V. Z., Chistov, A. G., & Trubnikov, A. M. (Provincial Psychiatric Hosp., Voronezh, USSR) Nekotorye pokazateli svértyvayushchei i protivosvértyvayushchei sistemy krovi pri khronicheskom alkoholizme i dinamika ikh pod vliyaniem antabusoterapii. [Some indices of the blood coagulatory and anticoagulatory system in chronic alcoholism and their dynamics under the influence of antabus therapy.] *Zhurnal Nevropatologii i Psikhiatrii*, 1971(Feb), Vol. 71(2), 268-271.—Studied a number of indices of the blood coagulatory system in 75 25-58 yr. old males suffering from chronic alcoholism of 1-10 yr. duration without prior liver pathology. The properties of the coagulatory system in untreated chronic alcoholism are described. Under the influence of antabus therapy an activation of the blood anticoagulatory system was detected, providing evidence for (a) a decrease in plasmic tolerance to heparin, and (b) an increase in fibrinolytic activity of the blood. Some increase of fibrinogen was also noted. (English summary)—I. D. London.

11057. Rickels, Karl, et al. (Philadelphia General Hosp., Pa.) Hydroxyzine and chlordiazepoxide in anxious neurotic outpatients: A collaborative controlled study. *Comprehensive Psychiatry*, 1970(Sep), Vol. 11(5), 457-474.—400 mg/day hydroxyzine was compared to chlordiazepoxide and placebo in a double-blind study conducted with 61 anxious and anxious-depressed neurotic outpatients and 69 general practice anxious neurotic patients. Hydroxyzine showed significant superiority over placebo. Hydroxyzine appeared as effective as chlordiazepoxide in the symptomatic treatment of neurotic anxiety. Differential dropout rates and differential reporting of side effects observed clearly favored chlordiazepoxide over hydroxyzine. There is need for further research to determine whether a dosage can be found at which hydroxyzine produces significantly more clinical improvement than placebo without causing the relatively large number of side effects observed in the present.—D. Prager.

11058. Ryšánek, K. (Purkyně U., Clinic for Internal & Infectious Diseases, Brno, Czechoslovakia) Vztah monoaminů k psychickým poruchám. [Monoamines and mental diseases.] *Activitas Nervosa Superior*, 1970(May), Vol. 12(2), 97-108.—Presents a review of international literature. (134 ref.)—H. Bruml.

11059. Tansella, Michele & Dello Russo, Giovanni. (U. Bari, Italy) Il problema della valutazione preclinica dei nuovi farmaci psicotropi. [The problem of preclinical evaluation of the new psychotropic drugs.] *Acta Neurologica*, 1969(Nov), Vol. 24(6), 877-891.—Made a preliminary study on a new psychotherapeutic drug AF 1161 (chlorophenil-piperazine-propyl-triazol-pirindine HCl) which has a sedating effect on behavior and reduces reaction toward negative stimuli. 36 17-63 yr. old Ss suffering from neurotic, depressive, and schizophrenic syndromes were treated. The effects of the drug were evaluated especially in relation to some primary symptoms, e.g., anxiety, asthenia, insomnia, etc. The

drug was ineffective in the neurotic and dissociative syndromes during the productive phase. Satisfactory results were obtained in the depressive syndromes and in 6 cases of schizophrenic defect. The best results were obtained from Ss in which a strong anxious component was not present. It is concluded that AF 1161 is a drug of difficult classification, which joins a certain antidepressive action with a socializing action. (31 ref.)—*A. M. Farfaglia*.

11060. Thiel, E. (District Hosp., Ansbach, W. Germany) **Ein Vorschlag zu einer konsequenten Nacht-Therapie psychisch Kranker: Zugleich ein kasuistischer Beitrag zu einer Tag-Nacht-Therapie depressiver Erkrankungen mit Psychopharmaka.** [A suggestion concerning consistent night therapy of the mentally ill: Also, a contribution to day-night therapy of depressive illnesses with psychopharmacological drugs.] *Nervenarzt*, 1971(Mar), Vol. 42(3), 157-161.—A day therapy combined with a night therapy is suggested for the treatment of endogenous psychoses. It was attempted to reproduce pharmacologically the 2 different physiologically basic forms of sleep, i.e., delta deep sleep with its restoring and anabolic effects and REM sleep with its effect of affective abreaction and important amnesia of dream occurrences. This procedure was to achieve a bodily improvement as well as a change in the emotional standpoint of the patient with regard to his depressive experience. An exact demonstration of such a therapy requires an EEG registration, and since a corresponding sleep EEG was not available, this contribution can only be a stimulus for a corresponding exact scientific demonstration. On the basis of the results, drugs in sleep research ought to be administered only after the termination of a REM phase.—*E. R. Wist*.

11061. Vallade, L. **Avantages et indications du moditen-retard.** [Advantages and indications for Moditen-Retard.] *Psychopharmacologie*, 1970(Mar), 10-13.—Proposes the indications for use of the long-acting preparation of fluphenazine, particularly in the management of chronically psychotic patients. This preparation can be used in the hospital, but its greatest value is in aftercare since it facilitates continued treatment for indefinite periods.—*W. W. Meissner*.

11062. Vovina, E. N. & Vovin, R. Ya. **Sravnitel'noe izucheniye effektivnosti lecheniya galoperidolom manikal'nykh sostoyanii v zavisimosti ot srokov nachala terapii.** [Comparative study of the effectiveness of haloperidol treatment of manic states in relation to time of beginning the therapy.] *Zhurnal Nevropatologii i Psikiatrii*, 1971(Feb), Vol. 71(2), 283-286.—Studied 2 groups of 24 manic-depressives in the manic state, differing only in phase of their condition, and corresponding degree of development of clinical symptomatology, in order to determine the effectiveness of haloperidol treatment of manic states as a function of time of initiation of therapy. Group I consisted of 13 Ss whose treatment began early after onset of the manic phase; Group II consisted of 11 Ss whose treatment began when the psychopathological symptoms presented a picture of the psychosis in full development. The greatest therapeutic effect was attained with earlier initiated treatment. In 6 cases it was possible to prevent further development of the manic phase, and in the remaining 7, to shorten it. In Group II it was not possible to arrest the manic phase. However, reduction of primarily motor disinhibition was possible without any accompanying reduction of the affective disturbances

and disorders of the thought processes (English summary)—*J. D. London*.

11063. Zall, Harry. (Philadelphia Naval Hosp. Pa.) **Lithium carbonate and isocarboxazid: An effective drug approach in severe depressions.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1400-1403.

11064. Zeidenberg, Phillip, et al. (New York State Psychiatric Inst., New York) **Clinical and metabolic studies with imipramine in man.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1321-1326.—6 out of 7 severely depressed patients improved rapidly on very high doses of imipramine. Clinical improvement correlated well with drug blood levels, which varied greatly in each patient and were characteristic of individuals rather than of dose. 3 out of 5 of the same Ss receiving a combination of presumptive inhibitors of drug metabolizing enzymes and imipramine had drug blood levels comparable to those of 2 Ss receiving high doses of imipramine alone.—*Journal abstract*.

HOSPITAL CARE & INSTITUTIONALIZATION

11065. Ananth, J. V., Ban, T. A., Lehmann, H. E., & Rizvi, F. A. (McGill U., Montreal, Quebec, Canada) **An adverse reaction unit: Results and functions.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1339-1344. Reviewed adverse reactions defined as "any effect of the drug other than its intended action"—reported among patients in a 1,552-bed psychiatric hospital during 1 yr. Most commonly encountered were neurological, psychiatric, and gastrointestinal reactions. The function of the adverse reaction unit has been extended from epidemiological surveys to various areas of psychopharmacological practice, and the unit is also being utilized increasingly for teaching and for consultation.—*Journal abstract*.

11066. Barahal, Hyman S. (Hempstead Psychiatric Hosp., Long Island, N.Y.) **The Hempstead unitization experience.** *Psychiatric Quarterly*, 1970(Jul), Vol. 44(3), 443-460.—Presents the historical background of the movement to improve treatment for the mentally ill in the 19th and 20th centuries. The unitization plan in the state of New York is described as an effort to alleviate some of the problems associated with the large and remote mental hospitals. The unitization plan calls for patients to be hospitalized in small hospitals close to their home areas. The Hempstead Psychiatric Hospital is one of the units which has been created. The catchment area, the physical structure of the hospital, the staff organization, the screening process, individual treatment programs, and community relations and interaction of the hospital are described.—*S. Knapp*.

11067. Beigel, Allan & Feder, Samuel L. (National Inst. of Mental Health, Bethesda, Md.) **A night hospital program.** *Hospital & Community Psychiatry*, 1970(May), Vol. 21(5), 146-149.—Describes a night hospital program which provides intensive treatment for up to 90 days in a more informal setting. Patients are encouraged to deal with daily events in a way that is therapeutically useful for the present and future. When 95 night-care patients were compared with 91 day-care patients regarding their diagnoses and characteristics, the "proportions of psychotic and nonpsychotic patients in the 2 groups were not significantly different, nor were the proportions of acute and chronic symptoms."—*P. Hertzberg*.

11068. Conway, Barbara. (9651 S.W. 77th Ave., Miami, Fla.) **The effect of hospitalization on adolescence.** *Adolescence*, 1971(Spring), Vol. 6(21), 77-92.—Presents advice directed to nurses to help adolescents cope with hospitalization.—A. B. Warren.

11069. Crary, William G. & Johnson, C. Warner. (U. Southern California, Medical Center, Los Angeles) **Attitude therapy in a crisis-intervention program.** *Hospital & Community Psychiatry*, 1970(May), Vol. 21(5), 165-168.—Describes a crisis therapy program which emphasizes immediate intervention and is oriented toward preventing long-term hospitalization. Goals in a ward which used milieu therapy and medical students in their psychiatric inpatient clerkship were (a) to return each patient to his prehospital level of emotional and social equilibrium, or (b) to a minimally socially acceptable level of control behavior. Patients were grouped into categories (a) with symptoms of personality disorganization, (b) with impaired reality testing, (c) with greatly externalized problems, (d) with low self-esteem, (e) with primary depressive reactions of the situational, neurotic, or psychotic type, and (f) with character disorders.—P. Hertzberg.

11070. Depp, Frederick C. (National Inst. of Mental Health, Washington, D.C.) **The dissociation of patient social status characteristics from psychiatric treatment, 1955-1965.** *Social Psychiatry*, 1971(May), Vol. 6(2), 73-79.—A study of psychotic 1st admissions to a large psychiatric hospital during the 1950s found decreasing association over time between social status characteristics of patients and assignments to convalescent leave and discharge during the 12 mo. after admission. The present study, using similar patient data gathered 10 yr. later, hypothesized a further tendency towards status dissociation due to increased resources for patient care that reduce the level of competition for these resources. It was suggested that reduced competition among those of differential influence would produce more comparable treatment sequences. This hypothesis was confirmed, with all patient status measures displaying reduced differences. 4 status measures: social class, education, race, and occupation level were dissociated from tenure and release indices employed, while 10 yr. earlier the latter 3 had been significantly linked to an indicator of hospital course. Both sex and marital status continued to demonstrate significant relationships with tenure and release processes. An interpretation of these shifts is offered emphasizing organizational resource level increases and considering the plausibility of alternative explanations. (French & German abstracts) (19 ref.).—*Journal abstract*.

11071. Grimberg, Moises & Franzen, Lincoln. (Westboro State Hosp., Talbot Habilitation Center, Mass.) **A program of simulated community living.** *Hospital & Community Psychiatry*, 1970(Jun), Vol. 21(6), 192-193.—Describes a program called Surrogate Society in which a patient earned everything from bed and board to treatment, thereby making him aware that his living conditions were determined by his own abilities and ambitions. The program had a small department store, a bank, and a monetary system. Working conditions resembled those in the community. A central feature was the patient government which held the primary responsibility for maintaining order. Initial experience with 234 Ss showed that the program is effective in helping patients return to and remain in the competitive life of the community.—P. Hertzberg.

11072. Harshbarger, Dwight. (Harvard Medical School, Boston, Mass.) **High priests of hospitaldom.** *Hospital & Community Psychiatry*, 1970(May), Vol. 21(5), 156-159.—Discusses the factors and roles involved in the status system in the mental hospital. 4 samples representing the problems and opportunities of the expert in the mental hospital are considered: social workers, general physicians, psychologists, and psychiatrists. The role of the organizational consultant is also discussed.—P. Hertzberg.

11073. Herz, Marvin K., Endicott, Jean; Spitzer, Robert L., & Mesnikoff, Alvin. (New York State Psychiatric Inst., Washington Heights Community Service, New York) **Day versus inpatient hospitalization: A controlled study.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1371-1382.—Reports the results of a controlled study to compare the efficacy of day vs. inpatient hospitalization for those patients for whom both treatments are equally feasible clinically. A total of 424 patients was evaluated. Newly admitted inpatients from the catchment area were randomly assigned to either day or inpatient care. Outcome evaluations, including measures of psychopathology and role function, were conducted at various follow-up intervals. Evidence of the superiority of day treatment on every measure used to evaluate outcome was found.—*Journal abstract*.

11074. Ittelson, William H., Proshansky, Harold M., & Rivlin, Leanne G. **A study of bedroom use on two psychiatric wards.** *Hospital & Community Psychiatry*, 1970(Jun), Vol. 21(6), 177-180.—Studied the influence of the number of patients assigned to a bedroom on the observable behavior of a patient. 2 wards—a recuperative ward with 13 males and 19 females and an admission ward with 7 males and 16 females—were observed every 15 min. over a 3-wk period. A total of 216 separate observations of each room or living area was obtained. Bedroom behavior was classified into 3 categories: isolated passive, isolated active, and social. Findings reveal (a) a marked preference of Ss in single rooms on the recuperative ward for isolated active behavior; (b) a stronger need for privacy among women; (c) all Ss seek privacy in their bedrooms; and (d) sharp differences in the distribution of activities among Ss in single and multiple-occupancy rooms. Data indicate that the multiple-occupancy rooms seem to foster patient withdrawal.—P. Hertzberg.

11075. Jones, Miriam L. (Veterans Administration Hosp., Topeka, Kan.) **Why locked doors?** *Hospital & Community Psychiatry*, 1970(May), Vol. 21(5), 143-145.—Describes the change from a locked to open door plan on a ward for seriously disturbed or dangerous psychiatric patients, unable to function without a rigidly structured environment. Patients were given personal responsibility and appropriate conduct was reinforced under the new program. Treatment responsibilities were decentralized, causing more patient movement. The plan was considered to be very successful.—P. Hertzberg.

11076. Langsley, Donald G., Machotka, Pavel, & Flomenhaft, Kalman. (U. California, Medical School, Davis) **Avoiding mental hospital admission: A follow-up study.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1391-1394.—300 patients requiring immediate hospitalization were randomly assigned to outpatient family crisis therapy (FCT) or were admitted to a university psychiatric hospital. Posttreatment 18-mo follow-up showed that Ss treated

without admission were less likely to be hospitalized after treatment and that their hospitalization was significantly shorter. At both 6 and 18 mo., FCT Ss were doing as well as the hospitalized Ss on 2 measures of social adaptation and were managing crises more efficiently.—*Journal abstract.*

11077. Lucero, Rubel J. & Vail, David J. (Hazelden Foundation, Center City, Minn.) **A comparison of three types of residential treatment programs for adolescents.** *Hospital & Community Psychiatry*, 1970(Jun), Vol. 21(6), 181-182. Compared the effectiveness of adolescent treatment programs which included (a) the traditional (adolescents housed with adults and participating in the same treatment); (b) the isolated (adolescents housed and treated separately); and (c) the integrated (adolescents in adult wards, but in different programs). A 2-yr follow-up was conducted on 288 adolescents who had been 1st treated in Minnesota's 7 state mental hospitals between October 1, 1960 and September 30, 1966. Results were analyzed by comparing the 3 types of programs regardless of hospital, and by comparing the hospitals regardless of programs. It was found that (a) all 3 programs are equally effective; (b) Ss in all programs tended to be similar regarding illness; and (c) the hospitals, regardless of program, were doing a good job in treating adolescents.—*P. Hertzberg.*

11078. Magaro, Peter A. & Giardina, Paul. (U. Maine) **Comparing custodial and democratic treatment programs.** *Hospital & Community Psychiatry*, 1970(Apr), Vol. 21(4), 118-119.—Examined the discharge rates of female patients assigned to a democratic or custodial treatment team in a state psychiatric hospital. The democratic team started with 70 patients and 119 more were admitted during the study. The custodial team began with 80 patients and treated 109 more during the study. Differences in discharge rates were not significant. However, when the patients discharged were divided into long-term (1 yr. or more) and short-term (less than 1 yr.) patients, significant differences did appear. The democratic team discharged more long-term patients, while the custodial team discharged more short-term patients. It is suggested that the social interaction emphasis in the democratic team may have been most helpful with the long-term patients, while the increased time spent with new patients by the custodial team and the use of spontaneous remission accounted for the effectiveness of that team with short-term patients.—*S. Knapp.*

11079. Meyer, Margrit. (Michigan State U.) **Family ties and the institutional child.** *Children*, 1969(Nov), Vol. 16(6), 226-231.—Describes the program at a small, private, Midwestern children's home for emotionally disturbed children and adolescents. It is stressed that child placement agencies should involve the child and the parents in preplacement planning, schedule regular family conferences after placement, permit the child home visits if he and the family desire, place children with their siblings, and provide follow-up family interviews with a caseworker. The home's methods of foster and visiting parent placement are described. The need for continuity in staff relationships with emotionally disturbed children is emphasized.—*D. T. Lekarczyk.*

11080. Moudgil, Virat K. (All-India Inst. of Mental Health, Bangalore) **The utility of a reception ward in mental hospital.** *Transactions of All-India Institute of Mental Health*, 1969(Dec), Vol. 9, 19-21.—Attempted to determine the possibility of shortening the period of hospitalization and improving the standards of patient

care by the formation of a separate reception ward. The method adopted for a 7-mo period was that every new admitted patient to the unit was intensively treated in a 10-bed reception ward housed in a semidetached room. If the patient's condition improved, then he was discharged; otherwise after a period of intensive treatment, he was transferred to the general ward. Results show that the duration of hospitalization was significantly shortened by 11.7 days/patient.—*S. R. Dhamand.*

11081. Pasewark, Richard A., Fitzgerald, Bernard J., Dunlap, Ralph L., & Spear, Paul S. (U. Wyoming) **Social class and disposition in a rural mental hospital.** *Hospital & Community Psychiatry*, 1970(Apr), Vol. 21(4), 120-121.—Examined the influence of social class on the inpatient dispositions of 271 patients admitted to a state psychiatric hospital. Social class was rated according to the patient's primary occupation, and hospital records were examined for correlations with type of admission, diagnosis, ward assignments and transfers, treatment, privileges, and disposition. Results for this rural hospital were generally contrary to those found for urban areas. Only 2 significant ($p < .01$) correlations were found: (a) middle-class women were less likely to receive antidepressants, and (b) women of higher social classes tended to be selected for the more desirable work assignments. It is suggested that the minimum staff at this hospital and the character of the state may have contributed to the nonpreferential treatment given. It is concluded that social class influence is dependent on the cultural, environmental, and population characteristics of the area.—*S. Knapp.*

11082. Rawls, James R. (Vanderbilt U.) **Toward the identification of readmissions and non-readmissions to mental hospitals.** *Social Psychiatry*, 1971(May), Vol. 6(2), 58-61.—Constructed a 200-item biographical information blank to determine discriminating characteristics in the life history antecedents of readmissions and nonreadmissions to mental hospitals. The S population ($N = 240$) was composed of 60 readmissions and 60 nonreadmissions from 2 state mental institutions. A chi-square analysis was utilized to determine those items that discriminated between patients who had been readmitted to the hospitals and those who had not. A total of 143 items were significant in 1 hospital, while 114 were significant in the other. 63 items had 1 or more options that were significant in the same direction in both hospitals. (French & German abstracts)—*Journal abstract.*

11083. Rhine, Mark W. & Mayerson, Peter. (U. Colorado, Medical School, Denver) **Crisis hospitalization within a psychiatric emergency service.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1386-1391.—Describes the expansion of an emergency psychiatric service to include the use of short-term hospitalization as an integral part of crisis therapy. Experience during the 1st yr. of operation, when 200 patients were treated, is summarized. 3 case histories are presented. It is believed that a small hospital unit, integrated within an emergency psychiatric service, can greatly enhance the scope and efficacy of crisis intervention.—*Journal abstract.*

11084. Soskis, David A. (U. Rochester, Medical & Dental School) **A brief follow-up rating.** *Comprehensive Psychiatry*, 1970(Sep), Vol. 11(5), 445-449.—The Brief Follow-Up Rating (BFR) is an economical method for evaluating posthospital adjustment in former psychiatric patients. The BFR score correlated significantly with 2 of

the Katz' Adjustment Scales (S-2, Level of Performance of Socially Expected Activities, and S-4, Level of Free-Time Activities), scales well validated but considerably more complex measures of posthospital adjustment.—*D. Prager.*

PSYCHOANALYTIC INTERPRETATION

11085. **Corsa, Helen S.** (Wellesley Coll.) **A fair but frozen maid: A study of Jane Austen's *Emma*.** *Literature & Psychology*, 1969, Vol. 19(2), 101-123.—Analyzes the character of Emma in Jane Austen's novel *Emma*. The novel concerns marriage. Emma avoids marriage while devoting her time to arranging marriages for others. "As the action of the novel proceeds, Emma's many attempts to deny she has 'a heart'—which can justly here be considered an euphemism for 'sexual needs'—are, one by one, proved ineffectual until she is confronted, in the last climactic moment with a frightening recognition that the 'frozen' has thawed: she was most sorrowfully indignant; ashamed of every sensation but the one revealed to her—her affection for Mr. Knightley." The process by which Emma eventually attains a greater degree of psychological maturity is described. (28 ref.)—*B. A. Stanton.*

11086. **Nass, Martin L.** (Brooklyn Coll., City U. New York) **Some considerations of a psychoanalytic interpretation of music.** *Psychoanalytic Quarterly*, 1971, Vol. 40(2), 303-316.—Attempts to outline some of the salient issues relating to an extension of the psychoanalysis of music and musical-auditory experience to the sphere of ego psychology. In so doing it relates the meaning of the musical experience to early hearing experiences and to the adaptive use of the exposure to sound. The musical experience is presented as facilitating the emergence of less structured, ambiguous cognitive states and their concomitant drive organization. These phenomena are presented as early modes of ego organization whose presence does not necessitate the postulation of a regressive process and which bears a strong resemblance to the listening and hearing experiences in psychoanalysis.—*Journal summary.*

11087. **Olgvie, Daniel M.** (Harvard U.) **The Icarus complex.** *Psychology Today*, 1968(Dec), Vol. 2(7), 30-34, 67.—The personalities of the artist Marc Chagall and the In Cold Blood murderer Perry Smith are similar to the Icarus complex described by Henry Murray. Both men, for example, often fantasied about flying and seemed to be fixated at the urethral-phallic stage. Icarusians seem to wish to remain children, "are anxious and confused about genital development, and they show an underlying fear of women." Basically, Icarusians fear that they are in danger of being destroyed.—*E. J. Posavac.*

11088. **Wilson, F. A.** (112 Beaufort Street, London, S.W. 3, England) **Swinburne's "dearest cousin": The character of Mary Gordon.** *Literature & Psychology*, 1969, Vol. 19(2), 89-99.—Attempts to correlate the psychopathology of Swinburne and his cousin, Mary Gordon, as evidenced in Swinburne's poetry and Mary Gordon's novels. Swinburne's desire to marry his cousin is interpreted as an attempt to progress beyond his fixation on flagellation. The poem "Anactoria" is used to depict evidence of Swinburne's association of lesbianism with sadism. It is noted that if in the poem "Kirklowe's

Fragment" the character of Helen Harewood—described as the cruel sister who presides over Regie's (Swinburne's) boyhood represents Mary Gordon, then, Swinburne viewed his cousin in sadistic terms. The novels of Mary Gordon (e.g., *The Children of the Chapel*) which concerns flagellation, demonstrate her mental preoccupations at a time when she and Swinburne were in daily proximity.—*B. A. Stanton.*

PSYCHODIAGNOSIS

11089. **Benton, A. L. & Ellis, E. E.** (U. Iowa, Neurosensory Center) **Test de Praxie constructive tri-dimensionnelle. Observations normatives concernant la performance au test lorsque les stimuli sont des photographies de constructions-modèles.** [Three-dimensional constructional praxis test: Observations concerning norms of performance when the stimuli are photographs of the model constructions.] *Revue de Psychologie Appliquée*, 1970, Vol. 20(4), 255-258.—Discusses the influence of age, sex, and cultural level on results of Benton's 3-dimensional performance test. Inability to construct 3-dimensional structures after viewing 2-dimensional representations was established in previous research to be positively symptomatic of cerebral lesion.—*K. J. Hartman.*

11090. **Blum, Donna M.** (Carleton U., Ottawa, Ontario, Canada) **Educational and diagnostic MMPI characteristics of a private hospital population.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 724-726.—Examined the educational and diagnostic differences of private hospital psychiatric patients on the MMPI. The distributions of MMPI T scores and standard deviations for 4 female and 5 male educational groups and for 3 diagnostic groups of both sexes within a randomly selected group of 363 female and 542 male patients in a private psychiatric hospital were studied. Results suggest that MMPI personality patterns should not be considered independently of the individual testee but that private psychiatric hospital patients do not produce MMPI profiles significantly different from those in state or provincial institutions.—*Journal abstract.*

11091. **Brenner, David L.** (Northwestern U.) **Clinical judgment as a function of experience and information.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6252.

11092. **Cooper, John.** (Inst. of Psychiatry, London, England) **The Leyton Obsessional Inventory.** *Psychological Medicine*, 1970(Nov), Vol. 1(1), 48-64.—Discusses the procedure in administering the Leyton Obsessional Inventory, along with its development and content. The "yes" scores are explained for the obsessional symptoms and personality traits together with scores indicating degree of resistance on the part of the S to the symptoms, and interference with other activities. In order to reduce administrative bias, the administrator must adhere to a set of standard instructions. 60 women were tested and their results explained, as well as data on test-retest reliability. It cannot be expected to find a "clear-cut definition" with personality traits and obsessional symptoms from a questionnaire procedure. This procedure intends to give only subjective results of feelings and behavior. (23 ref.)—*H. Reiter.*

11093. **Dohrenwend, Bruce P., Egri, Gladys, &**

Mendelsohn, Frederick S. (Columbia U., Coll. of Physicians & Surgeons) **Psychiatric disorder in general populations: A study of the problem of clinical judgment.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1304-1312. —In most attempts to study the prevalence of psychiatric disorder, cases have been defined by applying clinical judgment to symptom data. In some of these, e.g., the Midtown and Stirling County studies, this has involved assessments of written records, consisting for the most part of data collected by lay interviewers. Findings from the present study with Ss representing 67 community leaders, 257 adult heads of families, 117 psychiatric outpatients, 48 inpatients, and 24 convicts (in the Washington Heights section of New York City) indicate that respondents from the general population are less likely to be rated cases on the basis of actual interviews by psychiatrists than on the basis of interview protocols. Moreover, this difference varies with the type of interview and with the social status of the respondent. (20 ref.)—*Journal abstract.*

11094. Fiondo, John P. (Wayne State U.) **Toward the development of an economical, valid test battery for the identification of emotional disturbance in children.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6897.

11095. Flanagan, John C. (American Inst. for Research, Palo Alto, Calif.) **Evaluation and validation of research data in primary prevention.** *American Journal of Orthopsychiatry*, 1971(Jan), Vol. 41(1), 117-123. —Reviews some problems that often arise in interpreting research data in primary prevention studies, and summarizes the procedures that must be followed if the results are to be accepted as valid evidence of relationships. Valid research findings require (a) a random or representative sample of sufficient size; (b) a statement of the experimental treatment and the anticipated effect of the treatment; (c) criteria representative of the ultimate objective of reduced incidence rates; (d) simple, easily understood statistical techniques with replication as the best test of significance; and (e) an interpretation that summarizes not only the findings but their practical significance for various situations.—*Journal abstract.*

11096. Garnezy, Norman. (U. Minnesota) **Vulnerability research and the issue of primary prevention.** *American Journal of Orthopsychiatry*, 1971(Jan), Vol. 41(1), 101-116. —The goal of primary prevention of psychiatric disorder is a laudatory one, which unfortunately can not be realized in the absence of scientific knowledge about etiology. An emergent strategy is presented for acquiring such knowledge: the study of children who are vulnerable to the development of psychopathology in adulthood. (41 ref.)—*Journal abstract.*

11097. Hayden, Benjamin S., Talmadge, Max; Hall, Marjory, & Schiff, Donald. (Astor Home for Children, Rhinebeck, N.Y.) **Diagnosing minimal brain damage in children: A comparison of two Bender scoring systems.** *Merrill-Palmer Quarterly*, 1970(Jul), Vol. 16(3), 278-285. —48 residential emotionally disturbed children were divided into 2 groups: the neurologically impaired group and the nonimpaired group. The mean age of each group and the mean WISC Full Scale IQ were statistically equivalent (approximately 129 mo. and 91, respectively). Based on scores in a pediatric neurological examination (reliability $r = .88$), 17 Ss were in the

neurological group. Comparison of 2 Bender procedures, Koppitz Developmental Bender Scoring System and Canter Background Interference Procedure, with the neurological data revealed a high degree of relationship between the Background Interference Procedure and the neurological findings but the relationship between neurological findings and the Developmental Bender Scoring System was insignificant. The findings suggest that the Canter Background Interference Procedure is a more sensitive method in diagnosing minimal brain damage in emotionally disturbed children.—*R. V. Hamilton.*

11098. Hilf, Franklin D., et al. (Stanford U.) **Machine-mediated interviewing.** *Journal of Nervous & Mental Disease*, 1971(Apr), Vol. 152(4), 278-288. —Machine-mediated interviewing is a technique of psychiatric interviewing in which patient and interviewer communicate by means of remotely located teletypes. Messages are transmitted from 1 teletype to another via a computer. Advantages of nonverbal communication in the study of the psychiatric interview and in the development of a computer program designed to conduct psychiatric interviews are discussed. Excerpts from representative interviews with different patients are reproduced; 7 of the interviews were conducted with a hospitalized mute patient who, after the 5th interview, began to use spoken language for communication. This novel technique is suggested for patients who are unable to participate in the usual vis-à-vis interview.—*Journal abstract.*

11099. Kehrer, H. E. & Neugebauer, U. (Westfälische Wilhelms U., Münster, W. Germany) **Ein klinischer Diagnoseschlüssel für die Kinder- und Jugendpsychiatrie.** [A key for clinical diagnosis in child and adolescent psychiatry.] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1971(Jan), Vol. 20(1), 8-13. —The key for clinical diagnosis presented is part of a comprehensive key for use in neuropsychiatry. It is tailored for the needs of an independent child and adolescent psychiatric department within a university mental hospital. Primarily it is to be used in practical documentation. (17 ref.)—*H. A. Euler.*

11100. Lakshminarayan, C. S., Satyavathi, K., & Murthy, H. N. (Government Mental Hospital, Bangalore, India) **Towards the development of the psychopathic deviate scale.** *Transactions of All-India Institute of Mental Health*, 1969(Dec), Vol. 9, 81-86. —In pursuance of the 3 other scales developed by H. N. Murthy and H. N. Murthy and C. S. Lakshminarayan the same questionnaire consisting of 100 statements, was employed. 50 male prison inmates who were recidivists served as Ss and were matched with a normal population for age and sex. 34 items appeared to differentiate the prison population significantly at .01 or higher levels from normals.—*S. R. Diamond.*

11101. Lessing, Elise E. & Zagorin, Susan W. (Inst. for Juvenile Research, Chicago, Ill.) **Dimensions of psychopathology in middle childhood as evaluated by three symptom checklists.** *Educational & Psychological Measurement*, 1971(Spr), Vol. 31(1), 175-198. —Mothers of 102 10-13 yr. old psychiatrically examined children completed the Peterson Problem Checklist (PPC) and the Wichita Guidance Center Checklist (WGCC). The psychiatrist summarized the mother's responses on the Institute for Juvenile Research (IJR) checklist of 36 symptoms. Interitem correlations were

factor analyzed for each measure. Factor scores on each of the rotated factors were computed by the ideal variables method and a congruence matrix was constructed. 4 factors were extracted explaining 41% of the PPC variance; 4 factors, explaining 48% of the WGCC; and 3 factors, explaining 43% of the IJR. Canonical variate analysis of 2 checklists at a time revealed correspondences between the factor structures of the several checklists. In general, however, there was little significant improvement over the description of the factor structures when the canonicals were used.—N. M. Chansky.

11102. Notz, Irmgard. (School Psychological Council of the Berlin-Zehlendorf Precinct, W. Germany) **Die "Wörterliste" als psychodiagnostisches Hilfsmittel.** [The "word check list" as a psychodiagnostic instrument.] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1971(Jan), Vol. 20(1), 27-29. Presents a word checklist for 9-12 yr. olds, covering family, school, hobbies, and social behaviors. The child is instructed to underline the things he likes, and cross out the things he dislikes. 3 examples are given.—H. A. Euler.

11103. Philip, Alistair E. & Cay, Lorna. (U. Edinburgh, Research Council Unit for Epidemiological Studies in Psychiatry, Scotland) **The reliability and utility of a clinical rating of personality.** *British Journal of Medical Psychology*, 1971(Mar), Vol. 44(1), 85-89.—Investigated a clinician's use of a global rating of personality. The reliability of the rating proved to be very high and an examination of the clinician's personal construct system showed that the rating was the most global of a number of evaluative constructs. Patients rated on this global concept differed on a number of personality measures. On the 16 PF there were differences on 2nd-order anxiety as well as on several of that factor's primary constituents. On the Hostility and Direction of Hostility Questionnaire those rated of poor personality were more intropunitive and also more extrapunitive than the others. Provided that some knowledge of their reliability and validity is available, it is clear that clinical appraisals of personality are useful in a variety of situations.—*Journal summary*.

11104. Rogers, Michael G. (Reading County Borough Health Dept., England) **The early recognition of handicapping disorders in childhood.** *Developmental Medicine & Child Neurology*, 1971(Feb), Vol. 13(1), 88-101.

11105. Schwartz, Melvin L. & Dennerll, Raymond D. (Wayne State U.) **Neuropsychological assessment of children with, without, and with questionable epileptogenic dysfunction.** *Perceptual & Motor Skills*, 1970(Feb), Vol. 30(1), 111-121.—Reports neuropsychological assessment of 140 9-15 yr. old children with, without, and with questionable epilepsy, using the WISC, Minnesota Percepto-Diagnostic Test, and Bender recall tests. The major finding was the presence of a continuum of neuropsychological deficit which was absent or minimal in those Ss without epilepsy, somewhat more obvious in the questionable cases, and of considerable prominence in Ss with confirmed diagnoses of epilepsy. Interrelationships among the measures were explored. Some sex and seizure-type differences in test scores did emerge in the epilepsy group; however, handedness did not produce any significant results.—*Journal abstract*.

11106. Uecker, Albert E. (Veterans Administration

Hosp., Ft. Meade, S.D.) **Differentiating male alcoholic from other psychiatric inpatients: Validity of the MacAndrew scale.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 379-383.—The sample of alcoholics consisted of 111 male war veterans admitted to the Fort Meade treatment unit for alcoholics. The nonalcoholic sample consisted of 56 veterans admitted to the regular psychiatric units of the hospital during approximately the same time period. The booklet form of the MMPI was administered to alcoholics 1 mo. after admission to the hospital and to nonalcoholics shortly after admission or as otherwise referred. Means and standard deviations of each sample were calculated for MacAndrew's 49-item scale. The significance of the difference between the 2 means was assessed by the t test for uncorrelated means. The scale significantly differentiated the alcoholic and nonalcoholic samples. 84.7% of the alcoholics were correctly diagnosed, but 69.5% of the nonalcoholic controls were misdiagnosed. Results suggest that the high efficiency of the MacAndrew scale may be quite specific to outpatient settings and that considerable discriminative efficiency is lost when the scale is used in other settings.—S. R. Diamond.

11107. Ullman, Elinor & Levy, Bernard I. (George Washington U.) **An experimental approach to the judgment of psychopathology from paintings.** *Bulletin of Art Therapy*, 1968(Oct), Vol. 8(1), 3-12.—Obtained paintings from 2 groups: (a) 51 acutely ill hospitalized patients; and (b) 54 normals (hospital staff, vocational rehabilitation clients, and students of health professions). Judges consisted of 56 mental health professionals and student workers, and 28 persons with no mental health experience who were asked to identify the group membership of Ss based on an examination of their paintings alone. Results show that judges could most efficiently judge paintings by Ss whose IQs fell in the dull-average to bright-average range. Paintings by Ss with high or low IQs were more likely to be misjudged. It is suggested that emphasizing form more than content in paintings may lead to greater reliability in their use as a diagnostic technique. Illustrations of some of the paintings used in the study are included.—P. McMillan.

11108. Velez-Diaz, Angel G. (Florida State U.) **The Holtzman Inkblot Technique and the assessment of organic brain damage.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6915.

11109. Wiggins, Nancy. (U. Illinois) **Individual differences in diagnostic judgments of psychosis and neurosis from the MMPI.** *Educational & Psychological Measurement*, 1971(Spr), Vol. 31(1), 199-214.—Judgmental variables of 29 clinicians who had examined 861 MMPI profiles were available. Among these were validity coefficient, linear predictability, reliability, validity of the judge's model, linear component of the judge's accuracy, nonlinear component, incremental validity, and relationship with composite. Ratings and demographic data were also available. A principal components analysis of the cross products of the judges across the MMPI profiles revealed 3 unrotated components: a general one based primarily on the judge's relationship with the composite, validity and likability, and unreliability. Upon rotation, 3 types of idealized judges were hypothesized.—N. M. Chansky.

11110. Wing, Lorna. (Inst. of Psychiatry, Medical Research Council, Social Psychiatry Unit, London, England) **Observations on the psychiatric section of**

the "International Classification of Diseases" and the "British Glossary of Mental Disorders." *Psychological Medicine*, 1970(Nov), Vol. 1(1), 79-85.—Comments on Section V in *Psychiatric Diagnosis: The Eighth Revision of the International Classification of Diseases* and discusses some of the problems arising from the use of categories. Difficulty in using the *British Glossary of Mental Disorders* arises because of anomalies in the definition of syndromes and ambiguities in classifying them. Some of the problems discussed concern the classifications of psychosis associated with organic conditions, neurosis, personality disorders, affective psychosis, and schizophrenia. Suggestions for future classifications on furnishing data to answer questions concerning groups of cases, and for gaining feedback of information concerning patients showing certain syndromes for purposes of research are made. A system for diagnostic coding is described. (15 ref.)—H. Reiter.

BEHAVIOR DISORDER

11111. Cowan, Lawrence. (Wayne State U.) **A picture-preference test to measure the trait of addictiveness in personality.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6894.

11112. Guze, Samuel B., Woodruff, Robert A., & Clayton, Paula J. (Washington U., Medical School) **Hysteria and antisocial behavior: Further evidence of an association.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 957-960.—Reports a controlled comparison of 30 women with hysteria and 33 with anxiety neurosis, seen at a university psychiatric clinic, that confirms other work. Results show that personal and family history items dealing with delinquency and antisocial behavior were more frequently found in the case histories of the hysterics than in those of the anxiety neurotics. It is suggested that there is a significant clinical and familial association between hysteria and antisocial behavior or sociopathy.—*Journal abstract*.

11113. Hamilton, James W. (U. Cincinnati, Medical School) **The rear-end collision: A specific form of acting out.** *Journal of the Hillside Hospital*, 1967(Jul), Vol. 16(3-4), 187-204.—Presents a study of 3 cases, all young males, who had been involved in frequent automobile accidents specifically rear-end collisions. There were marked similarities in their developmental histories which led to poorly internalized controls, extreme difficulties in dealing with aggressive impulses, chaotic sexual identities, as well as intense castration anxiety and latent homosexual fears. The automobile was highly valued by them, primarily as a phallic, narcissistic extension of themselves. The rear-end collision can be seen as an attempt to master the fear of anal rape by the father, via identification with the aggressor, in the striking of another car from behind. (21 ref.)—*Journal summary*.

11114. Lester, David. (Suicide Prevention & Crisis Service, Buffalo, N.Y.) **Suicide and homicide: Bias in the examination of the relationship between suicide and homicide rates.** *Social Psychiatry*, 1971(May), Vol. 6(2), 80-82.—Examined the relationship between the incidence of suicide and homicide by correlations over time, locale, and status categories. The resulting correlations differed greatly. Correlation coefficients were computed for different sex-by-race subgroups of the

population, and the magnitude and direction of the associations were found to vary greatly for the different subgroups. It is noted that previous investigators of the relationship between suicide and homicide have presented only certain of the correlations illustrated here and thus their presentation of data may be biased. It is concluded that no available theory can explain the complex pattern of correlations found. It is suggested that a more fruitful approach would be a socio-psychological study of the individuals concerned. (French & German abstracts)—*Journal abstract*.

11115. McNeil, Thomas F. & Wiegink, Ronald. (Lafayette Clinic, Detroit, Mich.) **Behavioral patterns and pregnancy and birth complication histories in psychologically disturbed children.** *Journal of Nervous & Mental Disease*, 1971(May), Vol. 152(5), 315-323.—Examined the relationship between pregnancy and birth complications and the occurrence of later childhood behavioral disorders. Behavioral disturbances were classified as "psychotic withdrawal," "acting-out aggression," and "organic signs." In general "psychotic withdrawal" and "acting-out aggression" were found to be mutually exclusive, although either appeared to be compatible with findings of "organic signs." No pregnancy-birth complication, including premature birth, was found to be related to a specific behavioral disorder. A significant relationship was found between mother's marital status at time of the infant's birth and later manifestation of "acting-out aggression." Children of unwed mothers were found to be more likely to "act-out." (25 ref.)—R. Denis.

Drug Addiction

11116. Cernozubov, Katarina. (U. Hawaii) **Substance abuse.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6253.

11117. Dole, Vincent P. (Rockefeller U.) **Methadone maintenance treatment for 25,000 heroin addicts.** *JAMA: Journal of the American Medical Association*, 1971(Feb), Vol. 215(7), 1131-1134.—Methadone maintenance programs in the United States and Canada are now treating about 9,000 former heroin addicts. Data from these studies amply document the safety of this medication and its efficacy in stopping heroin addiction when it is given under strict medical control. Detailed statistics have been collected in New York City by the Central Data Office and made available to an independent evaluation committee. This committee has recommended continued support and expansion of the maintenance programs to assume a caseload of 25,000 addicts. The evolution of methadone treatment in New York is reviewed to learn what can be done about the administrative problems involved in expansion. There is a serious danger that treatment programs will become subordinated to power struggles. In addition, simple dispensation of methadone does not provide the necessary rehabilitation.—S. Diamond.

11118. Lentchner, Lawrence H. (Morris County Coll., Dover, N.J.) **Rehabilitation and civil commitments of addicts.** *Journal of Rehabilitation*, 1970(Nov), Vol. 36(6), 28-29.—Makes a plea for the need to look upon addicts as potential rehabilitants rather than as sick individuals. Research using rehabilitation criteria rather than medical or legal principles is called for so that use may be made

of these in establishing the capacity of addicts to profit from rehabilitation techniques and to establish his potential for responding to such procedures in contrast to the medical or legal approach. The developments of research to establish diagnostic procedures that will permit the determination of the type of rehabilitation program that is most effective in restoring the addict to life as a free and independent person appears to be essential.—*M. A. Seidenfeld.*

11119. **Petri, Horst.** (Free U., Psychiatric & Neurologic Clinic, W. Germany) **Haschisch und Suchtentwicklung bei einem 17 jährigen Mädchen.** [Hashish and the development of addiction in a 17 year old girl.] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1970(Oct), Vol. 19(7), 242-245.—Presents a case study in which the apparent addiction to hashish is explained by the client's neurotic personality structure. The assumption is presented that depending upon a person's emotional lability hashish is potentially addictive and can lead to stronger drugs.—*H. A. Euler.*

11120. **Votava, Z.** (Inst. of Pharmacology, Medical Faculty of Hygiene, Prague, Czechoslovakia) **Pharmacological problems of drug dependence.** *Acta Nervosa Superior*, 1970(May), Vol. 12(2), 136.

Alcoholism

11121. **Chess, Stephen B., Neuringer, Charles, & Goldstein, Gerald.** (U. Kansas) **Arousal and field dependency in alcoholics.** *Journal of General Psychology*, 1971(Jul), Vol. 85(1), 93-102.—Attempted to ascertain the relationship between field dependency, as measured by the Rod and Frame Test (RFT), and arousal level in alcoholic and nonalcoholic Ss. Ss were tested serially with RFT and a number of electrophysiological measures and objective tests. It was found that level of field dependency decreased in the alcoholics but not in the nonalcoholics. The decreased field dependency was not associated with increased arousal, as was hypothesized, except in 1 aspect. It was associated with an increasing number of responses on the Rotter Internal-External Locus of Control Scale indicating internal locus of control. (15 ref.)—*Author abstract.*

11122. **Claeson, Lars E. & Carlsson, Carl.** (Lillhagen Hosp., Hisings Backa, Sweden) **Cerebral dysfunction in alcoholics: A psychometric investigation.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 317-323.—20 men were admitted to a department for alcoholism and classified as gamma alcoholics. The men were given a battery of 9 tests. An attempt was made "to assess the intellectual performance of the Ss at the time of the test and to assess the severity of symptoms of cerebral dysfunctions." 3 of the Ss had no signs of cerebral dysfunctioning, 7 had signs of mild dysfunctioning, 5 moderate dysfunctioning, and 5 severe. Therefore results suggest that alcoholism can lead to cerebral dysfunction. (17 ref.)—*S. R. Diamond.*

11123. **Cutter, Henry S., Schwaab, Eugene L., & Nathan, Peter E.** (Brockton Veterans Administration Hosp., Mass.) **Effects of alcohol on its utility for alcoholics and nonalcoholics.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 369-378.—The hypothesis to be tested is the fairly widespread belief that alcoholics respond with positive feedback to alcohol, "so that 1 drink leads to the craving and consumption of many more." Male alcoholic patients and male nonalcoholic staff at a Veterans Administration Hospital were used as Ss. The Ss worked on a

task to earn points that could be directly translated into differing amounts of 100-proof bourbon whiskey. "A 4-way analysis of variance of the strategy scores, independent on 3 dimensions and correlated on 1, was employed to test the hypothesis." The hypothesis that alcoholics fear an initial drink but crave a 2nd is not supported.—*S. R. Diamond.*

11124. **Ditman, Keith S., et al.** (Brain Research Inst., Los Angeles, Calif.) **Characteristics of alcoholics volunteering for lysergide treatment.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 414-422.—During a 1½-yr period male residents of an alcoholic rehabilitation center were screened by a group of psychiatrists and psychologists to determine their suitability for participation in a drug study designed to compare the therapeutic effect of an iv injection of either lysergide, methylphenidate, or chlordazepoxide. Ss were given personal interviews as well as a battery of psychological tests including the MMPI, Shipley-Hartford, and Bender-Gestalt. Ss within the 3 groups varied in demographic variables. However, the volunteers seemed to see themselves as more troubled, insecure and insignificant; they were willing to try an experimental treatment for the relief of their more painful situation than their non-volunteer counterparts.—*S. R. Diamond.*

11125. **DuHamel, Thomas R.** (U. Massachusetts) **The interpersonal perceptions, interactions, and marital adjustment of hospitalized alcoholic males and their wives.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6254.

11126. **Emrick, Chad D.** (U. Colorado, Medical Center, Denver) **Abstinence and time perception of alcoholics.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 384-393.—32 male alcoholics in the treatment program of the Bowery Mission in the New York City Skid Row served as Ss. Each S was given 3 tests: Time Competence, 4 Story Completion Items, and 4 TAT cards. Summations of results suggest a picture of the alcoholic with a short period of abstinence: He is unable to live meaningfully in the present but may live in a limited and, to some extent, unpleasant past. In contrast, the alcoholic with longer abstinence lives more meaningfully in the present, or experiences a longer past, or both. (15 ref.)—*S. R. Diamond.*

11127. **Gorwitz, Kurt; Bahn, Anita; Warthen, Frances J., & Cooper, Myles.** (Maryland Dept. of Mental Hygiene, Baltimore) **Some epidemiological data on alcoholism in Maryland: Based on admissions to psychiatric facilities.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 423-443.—Focuses on longitudinal trends, patterns of care as related to population characteristics, and selected mortality information relating to alcoholics. During a 3-yr period ending 30 June 1964 6,432 persons were reported to the Register as having been under care in a participating facility with a psychiatric diagnosis of alcoholism. 18% of the alcoholics had 1 or more treatment episodes in which they received another psychiatric diagnosis. A total of 357 deaths were reported. The educational level of the alcoholics was strikingly similar to that of Maryland's general population aged 14 yr. or older.—*S. R. Diamond.*

11128. **Johnson, Nancy.** **What is Al-Anon?** *National Catholic Guidance Conference Journal*, 1971(Spring), Vol. 15(3), 188-191. Discusses Al-Anon—the national organization for the relatives of alcoholics—in terms of the "encounter group."—*A. M. Cawley.*

11129. **Kennedy, Dennis L.** (U. North Carolina,

(Chapel Hill) **An exploratory study of the relationship of alcoholics and their spouses in a simulation game situation.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6905.

11130. Knapstein, John W. (Texas Technological U.) **A cross-cultural study of certain personality features of tuberculous alcoholic patients.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6260.

11131. Meeks, Donald E. & Kelly, Colleen. (U. Toronto, Ontario, Canada) **Family therapy with the families of recovering alcoholics.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 399-413. —Conducted a clinical investigation over a 1-yr period employing a sample of 5 families in the Day Treatment Unit of the Ontario Alcoholism and Drug Addiction Research Foundation. The Unit offered an intensive 7-wk program of individual and group psychotherapy for alcoholic patients, followed by an aftercare program. In general, all the families involved showed evidence of improved relating, healthier communication, and increased mutual support. 2 of the men were able to remain abstinent during the entire course of the family therapy; the other 2 men and a woman patient showed substantial improvement. It is concluded that family therapy can help the alcoholic by assisting the entire family to openly confront and deal with their problems. —S. R. Diamond.

11132. Reiner, Elliott R. (Worcester State Hosp., Mass.) **Clinical pastoral orientation in alcoholism.** *Pastoral Psychology*, 1971(Apr), Vol. 22(213), 29-38. —"Effective pastoral counseling for alcoholics requires a climate of collaboration within an interfaith organizational structure as well as with the various agencies, clinics, and religious institutions in the community." Describes, assesses, and discusses 2 programs, and reproduces the assessment questionnaire utilized in evaluating the program.—O. Strunk.

11133. Ritson, B. (Maperley Hosp., Sheffield Region Addiction Unit, Nottingham, England) **Personality and prognosis in alcoholism.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 79-82. 100 alcohol addicts were studied clinically and with objective psychological tests. Both approaches demonstrated the poor prognosis of the hostile alcohol addict who has poor impulse control. Conscience structure was not a valid prognostic indicator.—*Journal summary*.

11134. Rosenbarger, Maxine. (Southern Illinois U.) **An investigation of selected community alcoholism resources and facilities and their relationship to post-hospitalization adjustment of male alcoholics.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6092.

11135. Ross, Christopher F. (Bexley Hosp., England) **Comparison of hospital and prison alcoholics.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 75-78. —Prison and hospital groups did not differ on 3 standard personality inventories—the Hostility and Direction of Hostility Questionnaire, the Symptom Sign Inventory, and the 16 PF—but the prison group was older, drank more, drank cheap wine as opposed to liquor, spent more time drinking, and showed more loss of control features. Large social class differences suggest confirmation of factors such as being single, having no home or steady job, and a record of arrests as more important than the type of treatment, as reported by C. McCance and P. F. McCance (see PA, Vol. 43:13084). —R. L. Sulzer.

11136. Rothstein, Emil & Clancy, David D. (Brockton Veterans Administration Hosp., Mass.) **Combined use of disulfiram and metronidazole in treatment of alcoholism.** *Quarterly Journal of Studies on Alcohol*, 1970(Jun), Vol. 31(2-A), 446-447. —Ss were 58 non-psychotic men hospitalized in the alcoholism unit. Their psychiatric diagnoses included character disorders and neuroses; all with long histories of alcoholism. Each received 500-mg disulfiram once daily for 30 days, then 250 mg. daily. $\frac{1}{2}$ were also given 750 mg. of metronidazole daily and $\frac{1}{2}$ an identical placebo. Results reveal no evidence that metronidazole in any way aided the treatment of the patients.—S. R. Diamond.

11137. Williams, Thomas K. (Western Michigan U.) **The ethanol-induced loss of control concept in alcoholism.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6073-6074.

Suicide

11138. Amberg, William F. (Brigham Young U.) **A cross indexed study of suicide intervention programs and analysis of current models.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6887.

11139. Birtchnell, John & Alarcon, Jose. **The motivation and emotional state of 91 cases of attempted suicide.** *British Journal of Medical Psychology*, 1971(Mar), Vol. 44(1), 45-52. —Investigated 91 consecutive cases of attempted suicide in Aberdeen, Scotland, in order to determine the patients' feelings and intentions at the time of the attempt. Females (22 teen-agers) outnumbered males by a ratio of 2.4:1. 89 patients had taken overdoses. Men appeared to think about suicide longer and dwell more on the past than women. Only 46.2% admitted to wanting to die at the time of attempt. Few patients checked retaliation as a motive. The issue of the significance of the attempt and the difficulty of determining the extent to which the patient truly wants to die is discussed. (21 ref.)—A. C. Bower.

11140. Feuerlein, Wilhelm. (Max Planck Inst. for Psychiatry, Munich, W. Germany) **Selbstmordversuch oder parasuicidale Handlung?** [Attempted suicide or parasuicidal treatment?] *Nervenarzt*, 1971(Mar), Vol. 42(3), 127-130. —Proceeding from the work of Stengel who next to the autoaggressive tendency of persons who attempt suicide stressed the appeal character of such attempts, a 3rd tendency, the wish for an interruption of the way of life, is described. In most attempted suicides, these 3 tendencies exist simultaneously even though of varying strength. In extreme cases where 1 of these 3 tendencies is overweighted, there exists a special form of attempted suicide: autoaggression (unsuccessful suicide), appeal (gesture), interruption (pause). If appeal or interruption tendencies are predominant, one should not speak about attempted suicide, but rather about parasuicidal treatment. The extreme form of the parasuicidal pause which until now was little known, is more closely described.—E. R. Wist.

11141. Furlong, Paul T. (U. Utah) **Psychological assessment of potentially suicidal patients at the Community Mental Health Center, Salt Lake City, Utah.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6899-6900.

11142. Hitchcock, John. (U. Pittsburgh, Medical School) **Comments on "The suicide prevention contribution to mental health" by David Lester.**

Psychological Reports, 1971(Jun), Vol. 28(3), 986.—Presents comments on the defense of suicide prevention centers by D. Lester (see PA, Vol. 46:Issue 6). It is argued that the purpose of the earlier article by J. Hitchcock and J. Wolford (see PA, Vol. 44:16950) was to point up the interrelatedness of behavior at various levels, and construct community mental health programs most likely to provide service to persons in need, regardless of the form in which that need was communicated.—*Author abstract*.

11143. **Lester, David.** (Suicide Prevention & Crisis Service, Buffalo, N.Y.) **The suicide prevention contribution to mental health.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 903-905.—Describes the kinds of activities in which suicide prevention centers are currently engaged. It is noted that these activities are often not limited only to the narrow focus of suicide prevention. Suicide prevention centers engage in activities (such as counseling the relatives of suicides) that other agencies do not engage in and for which the staff of suicide prevention centers are adequately trained. It is argued that the recent attack by J. Hitchcock and J. Wolford (see PA, Vol. 44:16950) on the suicide prevention center's contribution to mental health has failed to take cognizance of recent developments in suicide prevention and has been less constructive than desirable.—*Journal abstract*.

11144. **Nelson, Scott H. & Grunebaum, Henry.** (Health Services & Mental Health Administration, Rockville, Md.) **A follow-up study of wrist slashers.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1345-1349.—More than 1/2 the patients in this sample of 19 wrist slashers were well, or at least improved, 5-6 yr. after their initial hospital contacts. Data were gathered by speaking to individuals, their psychotherapists, or by indirect means, e.g., contact with rehabilitation counselors, municipal officers, and various social agencies. The improvement is attributed to an increased ability to verbalize feelings, the use of constructive action at times of emotional crisis, and the control of psychotic delusions through psychiatric follow-up and medication.—*Journal abstract*.

11145. **Resnik, H. L. & Dizmag, Larry H.** (National Inst. of Mental Health, Center for Studies of Suicide Prevention, Chevy Chase, Md.) **Observations on suicidal behavior among American Indians.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 882-887.—Discusses the sociocultural factors that have produced suicide rates on some Indian reservations that are significantly higher than the national average. Among the most important of these factors are the breakdown of traditional values and patterns of behavior resulting from enforced residence on reservations, geographical isolation, widespread unemployment, and a high incidence of alcoholism. It is suggested that suicide is not a unique symptom but is reflective of collective helplessness and hopelessness.—*Journal abstract*.

11146. **Santo-Domingo, Joaquín; Carrasco, Juan J., & León, Gerardo.** **Contribución al estudio epidemiológico de las tentativas de suicidio en España.** [Contribution to the study of epidemiology of attempts to commit suicide in Spain.] *Archivos de Neurobiología*, 1979(Apr), Vol. 32(2), 191-208.—Analyzed 50 cases of attempted suicide in Spain in an attempt to delineate epidemiological patterns. All Ss presented themselves to a general hospital for treatment. The following variables were investigated: sex, age, marital status, family

integration, psychopathological personality manifestations, the time of day during which the suicidal attempt was made, history of previous suicidal attempt, and seriousness of Ss' intentions. (French & English summaries)—*B. A. Stanton*.

Crime

11147. ———. **Offender therapy in the community.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 12-15.—By and large psychiatry has done little towards preventing crime and rehabilitating offenders. The difficulties of treating the offender patient are due to the psychology of the patient and the fact that society cannot afford the tolerance it bestows on neurotics. It is difficult to treat patients in court clinics and institutions because of the distrust of the offender for anyone connected with authority and the artificiality and isolation of prison life. The most desirable way of treating offenders is in the community. Criminal behavior is a failure of socialization and the patient must be in a position to experiment with social abilities and test his emotions in social situations. *M. Pearlman*.

11148. **Bean, Philip.** (Graylingwell Hosp., Clinical Psychiatry Unit, Chichester, England) **Social aspects of drug abuse: A study of London drug offenders.** *Journal of Criminal Law, Criminology & Police Science*, 1971(Mar), Vol. 62(1), 80-86.—Attempted to gain factual information about aspects of the social background of the offenders and the predominant patterns of their drug abuse. 100 consecutive drug offenders who were charged and found guilty were interviewed. 7 popular and widely used drugs were studied: heroin, phsyseptone, cocaine, cannabis, LSD, methedrine, dexedrine, and drinamyl. "Over 1/2 of the men had taken 5 or more of the drugs, and 1/4 had taken all 7. Only 5 said they had taken 1 drug, a further 5 denied drug taking at all. In addition 99% had taken alcohol. The move from 'soft' to 'hard' drugs is clearly seen when we compare the order in which cannabis and heroin were taken." 85% of Ss were single, 30 came from broken homes. A comparison between the social class of this population and social class distribution of the Registrar General's classification for England and Wales shows the drug offenders to be "overweighted in the higher professional, management and other professional, and unskilled manual classes. But not too much [emphasis] should be attached to this finding as the sample is so small." Only 21 out of the 92 not receiving full-time education were working at the time of their arrest. Over 1/2 had worked for less than 10 wk. in the last 26. 18 had been unemployed for a yr. and 9 for at least 3 yr. —*R. Gumer*

11149. **Blackburn, R.** (Broadmoor Hosp., Crowthorne, England) **Personality types among abnormal homicides.** *British Journal of Criminology*, 1971(Jan), Vol. 11(1), 14-31.—The main personality types occurring among abnormal homicides were determined by means of a cluster analysis of MMPI profiles of 56... patients. The analysis yielded 4 independent profile types, by which it was possible to classify 1/4 of the sample: (a) an over-controlled-repressor type characterized by an absence of reported disturbance, but a marked tendency to make use of denial and avoidance mechanisms; (b) a paranoid-aggressive type showing severe and widespread psychopathology and poor impulse control; (c) a depressed-inhibited type who reveal subjective depression, social withdrawal and

inhibition; (d) a psychopathic group who are extraverted, extrapunitive and impulsive, but who do not reveal any significant subjective distress. Significant differences were found between the groups on background variables, suggesting that the typology is meaningful. It was suggested that Types a and c on the one hand, and b and d on the other represent broad categories of over-controlled and under-controlled personalities. The presence of a substantial number of over-controlled personalities is consistent with a theory linking instigation and personality type to extreme aggression."—*R. Gunter.*

11150. Brown, Barry S., DuPont, Robert L., & Kozel, Nicholas J. (Narcotics Treatment Administration, Washington, D.C.) **Staff and client views of the role of the correctional client: Conflict and its implications for treatment.** *Social Psychiatry*, 1971(May), Vol. 6(2), 83-88.—Compared staff and inmate conceptions of the inmate role in 2 correctional settings differing in orientation toward custody as opposed to rehabilitation. There were 25 inmates and 101 staff members from a rehabilitative setting and 37 inmates and 44 staff members from a custodial setting. With the exception of staff treatment at the custodial setting, it was found that each institutional staff viewed the average inmate as significantly more aggressive, dependent, and less socially responsible than did the institution's clients. In an effort to make use of the clients' felt capacity for greater responsibility-taking, a program is suggested which would couple graduated demands for the client's prosocial adjustment with increases in his freedom of action. The custodial institution's treatment staff viewed the client as significantly more capable of responsibility-taking than did the client himself. The clients at the 2 settings also differed significantly. Clients at the rehabilitative setting attributed greater activism to the average inmate than clients at the custodial setting. It is hypothesized that this difference is a function of the greater freedom of action permitted at the rehabilitative setting. (French & German abstracts)—*Journal abstract.*

11151. Chwast, Jacob. (30 5th Ave., New York, N.Y.) **Special problems in treating female offenders: Socio-psychological aspects.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 24-27.—The problems of female offenders are not only a function of intrapsychic stresses but also of the social matrix. For a woman in our society to commit a crime the pressures towards deviance must be great indeed because, until recently, the generally accepted role of a woman is one of conforming and submission. Women, especially the younger generation, have been getting "bugged" and in the lower classes delinquency with prostitution are likely solutions. Anxiety and anger are aroused when the perception of the female role is confused. It is a major task of therapists to both help patients clarify their self-perceptions and also to pinpoint the reasons why patients vary in their ability to utilize the social opportunities available to them.—*Journal summary.*

11152. Cochrane, R. (Michigan State U.) **Research and methodology: The structure of value systems in male and female prisoners.** *British Journal of Criminology*, 1971(Jan), Vol. 11(1), 73-87.—Attempts "to relate a cognitively orientated value theory to criminal behaviour. In this study direct comparisons were made between the value systems of convicted criminals in prison and the value systems of a matched control group drawn from the general population. The instrument used to obtain an objective measure of value systems was

Rokeach's Value Survey. It was found that: (a) There are important differences between the value systems of prisoners and non-prisoners. (b) Prisoners appear to have a shorter time perspective and value those things which have immediate and personal relevance. (c) Prisoners value the characteristics of 'wisdom' and 'self-controlled' relatively highly, possibly because they see these as lacking in their lives. (d) Female prisoners exhibit a more "masculine" value system than do female non-prisoners. (e) A knowledge of individual prisoners value systems could be used for counseling and rehabilitation purposes."—*R. Gunter.*

11153. Eysenck, S. & Eysenck, H. J. (U. London, Inst. of Psychiatry, England) **Crime and personality: Item analysis of questionnaire responses.** *British Journal of Criminology*, 1971(Jan), Vol. 11(1), 49-62.—S. Eysenck and H. J. Eysenck, in an earlier article "outlined the 3-factor theory linking personality and criminal behaviour, and have published evidence in support of the hypothesis that criminals, in comparison with non-criminals, are characterised by high scores on psychoticism (P), extraversion (E), and neuroticism (N) scales of a new questionnaire constructed, validated and standardised by the writers. . . . This paper has provided evidence that the differentiation between personality features of criminals and controls is possible, even when both groups are left completely undifferentiated with respect to such factors as specific crimes committed. The evidence further suggests that existing scales of personality types, such as P, E and N, may be too broad to give maximum differentiation between groups, and that detailed item analyses may succeed in separating out component lower-order factors within these higher-order concepts which produce greater differentiation between groups. Such differentiation may also be helpful theoretically, and suggests further experimental and analytical work; the suggestion that the impulsivity rather than the sociability aspects of extraversion are involved with criminality, and the consequent discovery that a similar distinction obtains with respect to eye-blink conditioning, may be quoted as 1 example of such mutual interdependence."—*R. Gunter.*

11154. Fox, Richard G. (U. Toronto, Centre of Criminology, Ontario, Canada) **The XYY offender: A modern myth?** *Journal of Criminal Law, Criminology & Police Science*, 1971(Mar), Vol. 62(1), 59-73.—In a recent study there were 4 ways in which the XYY male differed importantly from the controls. First, even though the patients in the 2 groups had criminal records of comparable length, the XYY patients displayed, in their criminal behavior, less violence against persons than did control patients. Thus, of the 210 occasions on which the 18 control males had been convicted, 46 (21.9%) had been for crimes against the person while 132 (62.9%) had been for crimes against property. Conversely, the 9 XYY males had been convicted on a total of 92 occasions, but only 8 (8.7%) of these convictions had been for crimes against the person whereas 81 (88%) had been for crimes against property. This finding substantially demolished the original hypothesis that an extra Y chromosome predisposed its carrier to unusually aggressive behavior. The 2nd main finding in the group of XYY patients was that, although their records included considerably fewer crimes of violence against persons, they began their criminal activities at a very young age (on an average, 5 yr. earlier than the control patients).—*R. Gunter.*

11155. Gault, Robert H. (504 Lee St., Evanston, Ill.) **The therapeutic value of challenge.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 11-12.—Treatment of offenders requires challenges. A therapist's readiness to see offenders in his private office rather than in institution clinics is a challenge to offenders to accept therapy.—*M. Pearlman.*
11156. Gendreau, Paul & Suboski, Milton D. (Trent U., Peterborough, Ontario, Canada) **Intelligence and age in discrimination conditioning of the eyelid response.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 379-382.—Assigned male prison inmates to low-IQ ($n = 28$), high-IQ ($n = 14$), low-age ($n = 38$), and high-age ($n = 25$) groups. Ss were compared on classical discrimination eyelid conditioning. The high-IQ group (a) was superior to the low-IQ group in discrimination, largely as a result of lower levels of responding to CS-; (b) had significantly higher CR/UCR response slope ratios; and (c) contained a significantly higher proportion of classified voluntary-form responses. The low-age group was slightly more responsive than the high-age group, but the groups discriminated equally well and did not differ in response topography.—*Journal abstract.*
11157. Gibbens, T. C. & Silberman, M. (Inst. of Psychiatry, London, England) **Alcoholism among prisoners.** *Psychological Medicine*, 1970(Nov), Vol. 1(1), 73-78.—Attempted to determine the characteristics of heavy drinkers among the criminal population. From interviews, 404 prisoners or ex-prisoners from 3 contrasted London prisons could be categorized into 4 classes: (a) those with previous convictions for drunkenness (22%), (b) those who admitted to excessive drinking that interfered with social adjustment (18%), (c) those with no drinking problem (51%), and (d) a group in which information was uncertain (9%). Seemingly, about $\frac{1}{2}$ of those in prison had excessive drinking problems. Ethnic background, age groups, and age of conviction are discussed. Historical and social status seem to be the criteria in discussing the difference between excessive drinkers and the rest of the population.—*H. Reiter.*
11158. Langner, Herman P. (664 N. Michigan Ave., Chicago, Ill.) **The making of a murderer.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 950-953.—Proposes that inadequately expressed anger and aggression are largely responsible for atrocities committed by American soldiers in Vietnam. The case of a young man in late adolescence who attempted suicide after being involved in an incident like the My Lai massacre is described. It is concluded that immaturity, basic personality problems, and the frustrating circumstances of combat in Vietnam contribute to willful killing and the subsequent reactions to it.—*Journal abstract.*
11159. Lernell, Leszek. **Refleksje na temat trzech zagadnień metodologicznych etiologii kryminalnej.** [Reflections about 3 methodological problems of criminal etiology.] *Przegląd Penitencjarny*, 1970, Vol. 8(4), 3-16.—Discusses the (a) reasons for the use of a causal category in criminal etiology; (b) search for scientifically substantiated criteria which could be used in delineating criminogenic factors for establishing the bases of criminal etiology; and (c) search for a criminogenic factor which could be used for interpreting not only the genesis of particular types and groups of crimes, but also of crime as a phenomenon. The current state of knowledge concerning the causality and cause structure, leading to the commitment of a crime, is reviewed. It is argued that it is very difficult to find a connection between the cause and the criminal act in an individual case. Some criminogenic factors can be delineated statistically, but it is questionable which factors should be regarded as primary and which as secondary factors. An effort should be made to find a general criminal factor whose existence should not be excluded a priori.—*P. von Toal.*
11160. Lewin, Gertrud W. (203 Lexington Ave., Cambridge, Mass.) **Social work in the psychiatric court clinic.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 52-58.—The task of mental health workers is to understand and help people while the task of the judiciary is to control lawbreakers. Cooperation between these 2 groups depends upon mutual understanding of respective terminologies, concepts, and priorities. The social worker in the court clinic provides support and understanding to the delinquent's family and cooperates with the probation officer and psychiatrist.—*M. Pearlman.*
11161. Marcus, A. M. & Conway, C. (U. British Columbia, Vancouver, Canada) **A Canadian group approach study of dangerous sexual offenders.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 59-66.—Sex offenders, like all inmates, suffer from loss of freedom and responsibility but in addition face ostracism and hostility from the other inmates. A project with sex offenders, a group process not dominated by therapeutic efforts, was undertaken with 7 men and 2 leaders. It was felt that traditional therapy groups have several pitfalls including restricted communication because of the inmate social code, use of technical terms and emphasis on criminal activities to the exclusion of more normal activities. To circumvent these pitfalls a nontherapeutic group process was instituted, to evaluate in depth offenders' natural life style, with no intention of change. The format was a continuing dialogue with 2 participant leaders. Communication was undistorted by assessment anxiety and the leaders, by not focusing on a problem to be cured, were able to recognize strengths and attributes.—*M. Pearlman.*
11162. Martimor, E. (25 Blvd. Alexandre III, Cannes, France) **Les délits de jeu.** [The game of offenses.] *Annales Médico-Psychologiques*, 1971(Jan), Vol. 1(1), 49-56. Games provide a motivation for certain everyday human behaviors, i.e., they account for physical and mental activities entered into not for utilitarian ends but rather for the sake of competition, demonstration of mastery, social dominance, etc. Less is known of the game-like qualities that can motivate offenses against society. Forensic psychiatrists have occasion to observe how infractions of the law often derive from a game-like mechanism. Fire-setting, for example, is commonly engaged in for the "excitement" and feelings of importance it may bring from the signs of human alarm provoked. 6 cases are described of varied misdemeanors committed by persons without any obvious psychopathology. These can best be understood as a game played against society in which the perpetrator conceives himself to be something other than he is. The offense represents a concretized reverie, e.g., the bomb threat phoned proves his power over others. Dispelling feelings of inferiority or mild depression, or even a simple search for strong emotion, can be found among the offenders. Recidivism is not usually a problem, the shame and intimidation of being caught serves to prevent recurrence.—*H. E. King.*

11163. McDonald, William F. (U. California, Berkeley) **The victim: A social psychological study of criminal victimization.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6746.

11164. Miller, Alan R., et al. (California State Coll., Los Angeles) **Psychopathology and perception of physiques.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 475-478. —49 male prisoners, forming 4 diagnostic groups (normals, schizophrenics, passive-aggressives, and sociopaths) defined by actuarial MMPI tables, served as Ss. Diagnostic groups differed significantly in the consistency with which they stereotyped male physiques on the following concepts: child molester, follower, policeman, self, and criminal. 7 physiques were selected from W. H. Sheldon's *Atlas of Men* so that 1 was normal and the other represented extremities in endomorphy, ectomorphy, and mesomorphy.—*Journal abstract.*

11165. Milstein, Fanny. (58 Lincoln Ave., White Plains, N.Y.) **Special problems in treating female offenders: Clarifying the patient's sense of identity.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 16-20.—Offenders' concepts of themselves are confused and they lack planning ability and mental organization. To initiate therapy it is necessary to help the patient to formulate her goals and mobilize internal resources to plan her life. An example is the case of Alice who was a prostitute and found a new identity in being a mother.—*M. Pearlman*

11166. Payne, I. Reed; Howell, Robert J., & Roe, Allan V. (Brigham Young U.) **Marital status of prison inmates as a diagnostic index of personal characteristics and personality traits.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 859-862.—Selected 39 single, 39 married, and 22 divorced prison inmates matched for age. Ss were compared on a 15-trait personality test and 32 other personal variables. Only between the currently married and single groups were there a sufficient number of significant differences. The currently married inmates were significantly less deviant on 4 dimensions of the personality test. There were significant differences on 4 of the 32 personal characteristics. The currently married appeared to be better adjusted than the single inmates.—*Journal abstract.*

11167. Sherby, Linda B. (U. Kansas) **Length of incarceration, race and arbitrariness as instigators of aggression.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6913-6914.

11168. Skobejko, Roman. **Sędzia penitencjarny a polityka nagród i kar.** [Criminal judges and the policy of rewards and punishments.] *Przegląd Penitencjarny*, 1969, Vol. 7(4), 42-55.—Discusses the criteria to be applied in rewarding or punishing prisoners from the viewpoint of their social reeducation. The highest reward provided by the penal code is a permission to leave the prison for 5 days, a privilege granted only after the prisoner has served 1/2 of his sentence. The most severe punishment is placing a prisoner in isolated confinement for a 1-6 mon. period. It is the judge's responsibility to control, accept, or modify the different rewards and punishments granted or imposed by the wardens. Taking into consideration (a) the intellectual level of the prisoners, (b) cases of mentally handicapped inmates, and (c) pregnant women, the effects of this policy on the social reeducation of the individual prisoners and on the prison community are discussed.—*P. von Toal.*

11169. Totman, Jane M. (U. California, Berkeley) **The murderer: A psychosocial study of the process**

of criminal homicide. *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6726.

Juvenile Delinquency

11170. Anderson, Dennis B. (U. Nebraska) **Relationship between characteristics and attitudes of training school parolees and recidivism.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6235-6236.

11171. Felsenburg, Rosa. (4021 N. Adams St., Indianapolis, Ind.) **Special problems in treating female offenders: "Unfeminine" delinquent girls.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 21-23.—Many girls' delinquencies are in the area of violence and assault. These girls differ from others in that they do not want to assume the role of women. It is important to help these girls want to be and to act as women. Among the factors which cause or maintain delinquent pathology are the girls' relationship to their mothers. In therapy the patients should trade their dependence on their mothers for a temporary dependence on the therapists so that undesirable values will be replaced by healthier ones. Treatment also involves a full explanation of the present and past, abreaction, support, insight, concern, practical judgment, and a little intuition.—*M. Pearlman.*

11172. Hart, Tom F. (Cumberlow Lodge, London, England) **The changing function of the London girls' remand home: Crisis—intervention and classification.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 35-47.—Remand homes provide a place of detention for alleged offenders not allowed bail and for nondelinquents defined by the juvenile courts as being in need of care, protection, and control. Those in remand stay for a brief period and are observed in order that information and recommendations can be prepared for the juvenile court. An increasing number of girls come from the lower middle and upper working classes, are drug takers, and have histories of violence. A family and paternalistic atmosphere prevails in the home and involves full-time concern, the giving of valid reassurance, and the encouragement of personal skills. The staff like their jobs because they are involved in responsible personal contact with the girls and are free to express their opinions. Control in the home comes from the mutual respect between the girls and the staff.—*M. Pearlman.*

11173. Hayashi, Katsuzo & Ichitani, Tsuyoshi. (Otsu Classification Center of Juvenile Delinquents, Japan) **Factorial patterns of the Rosenzweig P-F Study.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Dec), Vol. 13(4), 181-191.—In 1950, Rosenzweig advocated 3 norms in psychology: the individual, the group, and the universal. The present paper reports 2 studies. Exp. I used normal 5th, 7th, & 9th graders. An attempt was made to relate the factorial personality types derived from Rosenzweig's Picture-Frustration Study to the personality types of Eysenck's MPI. In Exp. II, Ss were 186 juvenile delinquent boys. An additional group of 160 delinquent boys was also used. The factorial technique may be a keystone between the nomothetic mind and the idiographic mind.—*R. D. Nance.*

11174. Hooke, James F. (Virginia Commonwealth U., Richmond) **Correlates of delinquent behavior.** *Psy-*

chological Reports, 1971(Jun), Vol. 28(3), 795-800. —Attempted to develop an objective method for discriminating delinquent from nondelinquent adolescents and to describe personal and social differences between the 2 groups. 254 delinquent and 239 control adolescents were tested. A discriminant function using variables from the Color Pyramid Test, the Jr.-Sr. High School Personality Questionnaire, and some academic and demographic variables achieved statistically significant discrimination approximating the "hit" rates of other studies. However, the proportion of false positives rendered the technique impractical for general use. The delinquents generally showed less control over their behavior and tended to come from poorer family situations. A new approach to delinquency prediction research is proposed. (20 ref.)—*Journal abstract*.

11175. Jeżewski, Zygmunt. **Psychologiczna analiza niepowodzeń w nauce młodocianych przestępców.** [Psychological analysis of educational failures of delinquents.] *Przegląd Penitencjarny*, 1970, Vol. 8(3), 38-48.—Studied the effects of intelligence, neurosis, and motivation of young delinquents in learning a profession in a special prison. 2 groups of 20 Ss each were questioned. The 1st group consisted of Ss having earned unsatisfactory marks during 2 school periods, while the 2nd group included students with fair marks. Ss were queried about their past ambitions and the possibilities of the future regarding school and a profession. It was found that the educational achievements of the students were mainly affected by their motivation. Prisoners with neuroses had a higher percentage of failures than prisoners without a neurosis. A high IQ proved to be insufficient for good study achievements. A mediocre intelligence combined with a serious neurosis resulted mostly in an educational failure. A careful selection of educational candidates is suggested.—*P. von Toal*.

11176. Kahn, Michael D. (U. North Carolina, Chapel Hill) **Verbal mediation and the cognitive control of impulsivity.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6904-6905.

11177. Kahn, R. (U. California, Counseling Center, Berkeley) **The delinquent's ability to use information to modify his goals.** *British Journal of Criminology*, 1971(Jan), Vol. 11(1), 63-72.—Attempted to determine whether "learning from what happens to others" can be an effective way of communicating with delinquents in terms of their own hierarchy of needs. At present, in the United States at least, management of delinquents and selection of their placement settings do not differentiate their approaches to the 2 possibly different types of delinquent: "character disorder" and "neurotic." Perhaps the major significance of the present study is its implication that the "character disorder" delinquent, who has so often seemed "unreachable," can indeed modify his aspirations when the material presented to him is deemed relevant by him, within his own psychological framework, i.e., pertains to him and not to others. "The modification of goals is a first step in the modification of behaviour."—*R. Gunter*.

11178. Kalman, Barbara A. (Ball State U.) **Differences in the emotional adjustment and self concepts among institutionalized delinquent girls relative to the kinship system and homosexuality.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6259.

11179. Krueger, Doris E. (U. Miami) **Operant group therapy with delinquent boys using therapist's**

versus peer's reinforcement. *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6877-6878.

11180. Leelavathi, K. V. & Murthy, H. N. (All-India Inst. of Mental Health, Bangalore) **Factors affecting rehabilitation of delinquents.** *Transactions of All-India Institute of Mental Health*, 1969(Dec), Vol. 9, 75-79.—Investigated 7 paroled delinquents who were unable to adjust and 10 paroled delinquents who adjusted well in relation to 3 areas, personality, intrafamilial factors, and the social milieu. Data were obtained by the ratings of (a) the training school superintendent, (b) parents, and (c) the investigator after visits to the homes and neighborhoods of the Ss. Personality traits, e.g., evasiveness, obstructiveness, lacking frustration tolerance, marked interest in opposite sex, and impulsive attempts at injuring self or others, seem to present more markedly in the nonadjusted. Cheerfulness, gregariousness, and assertiveness helps as indicative of adjustment potential. The nonadjusted delinquent finds parental rejection, inconsistent punishment by mother, a very lenient father, and a family with 7 or more children. The adjustable ones seem to markedly feel that they hurt their parents by their behavior. The social milieu seems to be inadequate with respect to marital adjustment in family, poor education, and vocational status as well as poor living conditions in overcrowded places in the town.—*Journal summary*.

11181. Morawski, Jacek. **Z badań skuteczności resozjalizacji młodocianych w rygorze obostrzonym.** [Study of the resocialization effectiveness of more rigorous restrictions on young criminals subjected to them.] *Przegląd Penitencjarny*, 1969, Vol. 7(4), 25-41.—Under the 1958 Polish penal law, more rigorous restrictions are imposed on young delinquents, prohibiting them to (a) use their own underwear, (b) purchase supplementary food during the 1st 3 mo. of their confinement, and (c) smoke. Their salary for work done was reduced up to 20%. The effectiveness of these restrictions was studied by questioning 241 delinquents sentenced to them. Ss answered a series of questions, giving their opinion on rowdy behavior, on the effects of these restrictions, and on their willingness to obey the laws after their release from prison. It was found that the effectiveness of such restrictions differs greatly when applied to young delinquents punished for the 1st time. It is suggested that a more careful selection be made of young delinquents to be subject to these rigorous restrictions. The degree of their demoralization should be considered and the more rigorous restrictions should be reserved for more serious cases. (29 ref.)—*P. von Toal*.

11183. Rubin, Jerome. (U. Maryland) **Change in self-concept during institutional confinement.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6911.

11184. Schmeideberg, Melitta. (199 Gloucester Pl., London, England) **Special problems in treating female offenders: Promiscuous and rootless girls.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 28-33.—Modern "permissive" parents often refrain from advising their teen-age children about the dangers and difficulties they will encounter. The refusal of "progressive" parents to take responsibility invites

many real dangers as well as being a cause of emotional frustration.—*M. Pearlman.*

Homosexuality & Sexual Deviation

11185. Goldstein, Alan. (Temple U., Medical School) **Case conference: Conflict in a case of frigidity.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 51-59.—Traces the case of a 24-yr-old woman, initially presenting frigidity as her only problem, from beginning to end of treatment. It developed that crucial factors contributing to the problem were fears of the expression of her own anger and the anger of others, and misconceptions concerning the role of wife and mother. The interconnections of the various areas of disturbance and the resulting therapeutic measures are discussed.—*Journal abstract.*

11186. James, William H. (University Coll., Galton Lab., London, England) **Sex ratios of half-sibs of male homosexuals.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 93-94.—Gives an explanation for the earlier reports based on the data of T. Lang and of K. Jensch that homosexuals have odd ratios of half-sibs. Perhaps the tendency is for offspring of a disrupted marriage to live with the same sex parent. Further, half-sibs not living in the same house may be unaware of each other. Reporting errors could then be the source of bias.—*R. L. Sulzer.*

11187. MacCulloch, M. J., Williams, C., & Birtles, C. J. (U. Birmingham, England) **The successful application of aversion therapy to an adolescent exhibitionist.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 61-66.—Describes a 12-yr-old male referred to a clinic for treatment of exhibitionism. Preliminary treatment of his behavior problem employed a conventional psychotherapeutic approach, but impending police action following a further act of exhibiting himself, called for a more rapid resolution. The method of anticipatory avoidance aversion therapy for homosexuality was modified for use in this case. There was a successful reduction in the patient's exhibitionistic behavior, deviant masturbatory phantasy, and sexual orientation towards older women, following 18 20-min treatment sessions. Follow-up at 5 mo. found recovery in all respects maintained. (17 ref.)—*Journal abstract.*

11188. Reitz, Willard E. & Keil, William E. (U. Western Ontario, London, Canada) **Behavioral treatment of an exhibitionist.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1971(Mar), Vol. 2(1), 67-69.—Describes the behavioral treatment of a 36-yr-old male with a 25-yr history of exhibitionism. Treatment involved having the patient exhibit himself under office conditions witnessed by nurses. He reacted with shame, guilt, and embarrassment. After 19 mo. the patient had not again exhibited himself.—*Journal abstract.*

11189. Russell, Donald H. (7 Colchester St., Brookline, Mass.) **On the psychopathology of boy prostitutes.** *International Journal of Offender Therapy*, 1971, Vol. 15(1), 49-52.—Homosexual activity results from a combination of disturbed psychosexual development, social, and psychosocial factors. A preponderance of boy prostitutes had their capacity for a satisfactory relation seriously impaired by early maternal deprivation. With many boy prostitutes the problem is less of sexuality than of pathology evoked in social situations that demand homosexual compliance. Pros-

titution may be a phase that does not preclude eventual maturity.—*M. Pearlman.*

11190. Shore, Miles F., Clifton, Anne; Zelin, Martin, & Myerson, Paul G. **Patterns of masochism: An empirical study.** *British Journal of Medical Psychology*, 1971(Mar), Vol. 44(1), 59-66.—Questionnaire and interview techniques were used to study 26 highly masochistic Ss. 2 groups of masochists were identified (victims and doers) which differed clearly in terms of character traits, attitudes, object relationships, and life history. Clusterings of answers on the questionnaire designed to reflect masochistic attitudes also revealed significant group differences. A 3rd group, the somatizers, was less distinct. The 11 patients who were not readily classified were taken to be in a transitional state along a kind of continuum.—*A. C. Bower.*

11191. Warner, Gloria M. & Lahn, Marion. **A case of female transsexualism.** *Psychiatric Quarterly*, 1970(Jul), Vol. 44(3), 476-487.—Presents a case history of a 28-yr-old South American, white, Catholic homosexual woman. "Factors which may have increased and fostered conscious male gender identity in this biologically normal female patient include the father's wish for a boy, early identification with father, rejection by and longing for mother who favored the patient's brother with whom the patient identified as an aggressor and of whom she was afraid, early fear of heterosexuality and smothering as well as a frightening primal scene experience. The patient first consciously wished to be a boy after her brother returned home when she was 8 and demonstrated physical closeness to mother. Heterosexuality, danger, and death are further related by memories of sister's surgery, grandmother's death, and her own appendectomy with fear of mutilation, all occurring within a 6-mo period." Results from the WAIS, TAT, Rorschach and MMPI administered on admission, 1 mo. later on the 1st day of menses, and 2 yr. later after bilateral mastectomy and hormonal treatment are reported. The literature is briefly reviewed and salient features discussed. (28 ref.)—*S. Knapp.*

MENTAL DISORDER

11192. Brandon, S., McClelland, H. A., & Protheroe, C. (U. Manchester, England) **A study of facial dyskinesia in a mental hospital population.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 171-184.—15.3% of the male (n = 426) and 30.5% the female (n = 484) patients showed constant or recurrent chewing, champing, or swallowing movements. In rare cases dyskinesia appeared to be caused by phenothiazine exposure, but age and constitutional factors were more important. Under age 50 the disorder was rare without brain damage. (15 ref.)—*R. L. Sulzer.*

11193. Certcov, Daniel. (Jose M. Penna Municipal Hosp., Buenos Aires, Argentina.) **La personnalité psychopathique comme maladie mentale chronique.** [Psychopathic personality as a chronic mental disease.] *Annales Médico-Psychologiques*, 1971(Feb), Vol. 1(2), 215-221.—Exception is taken to the classic view that the psychopath differs from the normal in his behavior in only a quantitative sense, causing suffering to himself and to society thereby. It is held that quantitative variations of the personality are not necessarily maladaptive, and that even hysterical or obsessional traits, for example, are flexible enough to allow an adaptive integration of the individual to his general social environment. On the contrary, the psychopathic person

has lost the capacity to control the deviant traits of his personality. They represent a permanent, qualitative change in reactive behavior beyond the will of the individual which renders him incapable of adapting to fluctuations in the social milieu in which he finds himself. They represent, in this sense, a chronic mental disorder. Morbid psychopathic personalities are as unable to adapt to the special environment of the neuropsychiatric hospital, unfortunately, as they are to the demands of the greater world outside.—H. E. King.

11194. Criddle, William D. (Kings County Hosp., Brooklyn, N.Y.) **One-way screen observation of psychiatric patients.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 918—9 male and 7 female psychiatric inpatients verbally answered the items of the Edwards Social Desirability (SD) Scale and completed 2 anxiety inventories. Response latencies and durations to the items of the SD scale were measured. Ss were seen twice, with 1/2 the sessions held in front of identified Os seated behind a 1-way screen. No effects attributable to observation were found. Response latencies and durations were shorter and anxiety levels lower in the 2nd interview.—*Author abstract.*

11195. Darley, P. J. & Kenny, W. T. (Community Mental Health Services, Massachusetts Mental Health Center, Boston) **Community care and the "Queequeg syndrome": A phenomenological evaluation of methods of rehabilitation for psychotic patients.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1333-1338.—An English day center for psychiatric patients, especially psychotics and chronic schizophrenics, had a low success rate when run traditionally. The theory is presented that former psychiatric hospital patients are generally not accepted by the community as recovered, but are given the new and damaging role of citizen-on-probation. It is demonstrated that changes in the structure and program of the day center point toward new methods of rehabilitation aimed at helping patients combat the "Queequeg syndrome."—*Journal abstract.*

11196. Evans, Philip. (National Hosp. for Nervous Diseases, London, England) **Failed leucotomy with misplaced cuts: A clinico-anatomical study of two cases.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 165-170.—2 patients submitted to leucotomy failed to improve, and both committed suicide, 1 3 yr., the other 5 yr. after the operation. Anatomical study of their brains showed that the thalamo-frontal radiations had not been severed. The cases are discussed in the light of previous reports, and the point is stressed that failure to improve after leucotomy does not necessarily imply poor case selection.—*Journal summary.*

11197. Flanagan, Thomas A., Goodwin, Donald W., & Alderson, Philip. (Washington U., Medical School) **Psychiatric illness in a large family with familial hyperparathyroidism.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 693-698.—8 of 10 members of a family exhibiting hyperparathyroidism, vs. 1 member of a control group, experienced major psychiatric symptoms. This confirms findings on a family studied by R. E. Cutler, E. Reiss, and L. V. Ackerman, although there is still no clear explanation of the basis of the association.—R. L. Sulzer.

11198. Hudgens, Richard W., Robins, Eli, & Delong, W. Bradford. (Washington U., Medical School) **The reporting of recent stress in the lives of psychiatric patients: A study of 80 hospitalized patients and 103**

informants reporting the presence or absence of specified types of stress. *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 635-643.—There was a low rate of agreement between patients and family informants as to whether a type of stress had occurred and whether a specific event had occurred. In relating causes and effects patients and informants differed even more greatly. The more events reported, the greater was the disagreement. Retrospective studies which purport to demonstrate relations between stressful events and psychiatric states may, then, be of dubious validity.—R. L. Sulzer.

11199. Jathar, V. S., et al. (Seth G.S. Medical Coll., Bombay, India) **Serum vitamin B₁₂ levels in Indian psychiatric patients.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 699-704.—A study of 152 patients in Bombay, both vegetarians and meat eaters, failed to identify specific psychiatric symptoms attributable to vitamin B₁₂ deficiency. (15 ref.)—R. L. Sulzer.

11200. Kass, Walter; Preiser, Gary, & Jenkins, Adelbert H. (New York U., Medical Center) **Inter-relationship of hallucinations and dreams in spontaneously hallucinating patients.** *Psychiatric Quarterly*, 1970(Jul), Vol. 44(3), 488-499.—Studied the dreams and hallucinations of 4 male and 3 female 19-44 yr. old patients in a city psychiatric hospital. 5 Ss experienced spontaneous auditory and visual hallucinations, 1 somesthetic hallucinations, and 1 amphetamine-induced hallucinations. All Ss recalled their dreams with varying vividness. 4 Ss reported being awakened by their hallucinations, while the only S to report that the hallucination had entered his dreams was the amphetamine abuser. It is concluded that: "Hallucinators maintain distinction between their dreams and hallucinations, but do not definitely differentiate the latter from their normal perceptions. Although hallucinations may interrupt sleep and wake the dreamer, dreams are not pervaded by hallucinations. The possibility that dreams may partake of the hallucinatory content requires further investigation. Hallucinogenic drugs may potentiate penetration of dreams by waking-state hallucinations as part of the day residue."—S. Knapp.

11201. Mathis, Harold I. (George Washington U.) **Emotional responsiveness in the antisocial personality.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6907-6908.

11202. McGuire, Michael T. (Massachusetts General Hosp., Stanley Cobb Lab., Boston) **Dyadic communication, verbal behavior, thinking, and understanding: III. Clinical considerations.** *Journal of Nervous & Mental Disease*, 1971(Apr), Vol. 152(4), 260-277.—Attempts to relate a theory presented in Part I and the research findings of Part II in this series (see M. T. McGuire, PA, Vol. 46:Issue 6) to common observations in clinical psychiatry. In addition, the original theory is expanded to take into account the influence of affects and motives on thinking, understanding, and 2-person communication with the aim of developing a more inclusive general clinical theory. (35 ref.)—*Journal abstract.*

11203. Nagalakshmi, S. V. & Murthy, H. N. (All-India Inst. of Mental Health, Bangalore) **Relation of conditioned response strength to anxiety in normals, neurotics and psychotics.** *Transactions of All-India Institute of Mental Health*, 1969(Dec), Vol. 9, 65-73.—20 normals, 20 neurotics, and 20 psychotics served as Ss.

Anxiety was measured with the anxiety score of the Multiphasic questionnaire. An eye-blink conditioning experiment was administered, as well as a verbal conditioning paired associate learning task, and the 16 PF questionnaire. Blood pressure and pulse rate was determined. The psychotic group was higher in conditioning (eye-blink performance) than neurotics and neurotics higher than normals. On the verbal conditioning test normals showed superiority over the others.—S. R. Diamond.

11204. Naylor, G. J., McNamee, H. B., & Moody, J. P. (Royal Dundee Liff Hosp., Scotland) **Changes in erythrocyte sodium and potassium on recovery from a depressive illness.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 219-223.—Venous blood of psychotic but not neurotic depressives showed a significant decrease in erythrocyte sodium on recovery, while no change in erythrocyte potassium concentration occurred. Relationship with depressive symptoms is uncertain, but an increase in neuronal intracellular sodium would decrease the action potential of a nerve.—R. L. Sulzer.

11205. Prabhu, G. G., Agrawal, A. K., & Teja, J. S. (All India Inst. of Medical Sciences, New Delhi) **Effect of anxiety and depression on time estimation and judgment.** *Indian Psychological Review*, 1969(Jul), Vol. 6(1), 16-21.—32 anxiety neurotics, 32 psychotic depressives, and 18 normal controls matched for age, education, and sex were tested individually on a time production (counting) test, and a time reproduction test (tapping). Subjective feelings about passage of time and an estimation of the total time of testing were also obtained individually. No significant intergroup differences occurred in any of the time estimation measures. 47% of the anxiety neurotics felt that time did not pass normally and 1% of the depressives felt that it was moving slowly. On recovery 71% of the depressives felt that it was passing normally. The difference in the subjective feeling during depression and recovery was significant. (30 ref.)—K. C. Panda.

11206. Ramchandran, S. & Dwivedi, S. D. **Social stratification of psychiatric cases in a military hospital.** *Indian Psychological Review*, 1969(Jul), Vol. 6(1), 32-36.—930 psychiatric patients admitted to an army hospital in India were classified on the basis of age, length of service, rank, and types of illness, following the criteria set by the World Health Organization. The results, based on percentage analyses, showed that incidence of neuroticism was higher (71.1%) than schizophrenia (14.2%). Up to age 36, the incidence of anxiety neurosis was high, and hysteria was most common between 18-24 yr. Psychoneurosis was more common among persons under 30 yr. of age. Incidence of illness was high during the 1st 3 yr. of service life and among the lowest ranked personnel (77.45%).—K. C. Panda.

11207. Rogers, David P. (Duke U.) **Comparisons of experiences of individuals from differing personality syndromes: An experiment in social phenomenology.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6243-6244.

11208. Sanders, George M. (George Washington U.) **Conformity responses to social pressures in individuals with life patterns of social conflict.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6912.

11209. Sarbin, Theodore R., Juhasz, Joseph B., & Todd, Peyton. (U. California, Santa Cruz) **The social psychology of "hallucinations."** *Psychological Record*, 1971(Win), Vol. 21(1), 87-93.—Investigated the frequency of false perceptions, "hallucinations," in samples of psychiatric and normal Ss. In Exp. I, 14 hallucinating and 14 nonhallucinating mental patients and 14 undergraduates were led to expect the taste of salt in distilled water. Significantly more normals thought they tasted salt than mental patients ($p < .01$). In Exp. II, 9 hallucinating and 13 nonhallucinating acute schizophrenics were compared to 22 medical patients in a test in which the Ss were led to expect a sound to occur. Results were not significant, but were in the same direction as those found in Exp. I. It is argued that these results could not be predicted by psychophysics or psychiatry, but can be understood in terms of the meaning of the social situation in which the actions occurred.—*Journal abstract*.

11210. Sreedhar, Krishna P. & Murthy, Vinoda N. (All-India Inst. of Mental Health, Bangalore) **Drive level and learning.** *Transactions of All-India Institute of Mental Health*, 1969(Dec), Vol. 9, 43-49.—Explored the relationship between drive level and learning among 15 chronic schizophrenics, 15 neurotics, and 15 normals using a double criterion of drive—psychiatric diagnosis and manifest anxiety score on a modified Indian adaptation of the MA scale. Learning measures were a step maze to represent motor learning, and a paired associates test taken from Wechsler Memory Scale to represent verbal learning. Results were subjected to analysis of variance for the variables time, trial, and errors. Results indicate that drive level is related to motor learning and not verbal learning. (16 ref.)—S. R. Diamond.

11211. Ström-Olsen, Rolf & Carlisle, Sheila. (Brook General Hosp., Neurosurgical Unit, London, England) **Bi-frontal stereotactic tractotomy: A follow-up study of its effects on 210 patients.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 141-154.— $\frac{1}{2}$ of the S population was essentially cured and another large fraction improved after tracts of the orbital cortex were destroyed by implantation of radioactive seeds. Best results were obtained on depressions and obsessional neuroses. None of the schizophrenics did well. No patient showed a gross frontal lobe syndrome post-operatively, side effects were minimal, and working capacity and normal enjoyment were not affected. This operation avoids unnecessary destruction of brain tissue between the cortex and target area. (29 ref.)—R. L. Sulzer.

11212. Vaernet, K. & Madsen, Anna. (Rigs Hosp., Copenhagen, Denmark) **Stereotaxic amygdalotomy and basofrontal tractotomy in psychotics with aggressive behaviour.** *Journal of Neurology, Neurosurgery & Psychiatry*, 1970(Dec), Vol. 33(6), 858-863.—Treated 12 patients with personality disorders or chronic schizophrenia in whom aggressive-destructive behavior was a prominent feature by bilateral stereotaxic electrocoagulation of the amygdala. In 2 Ss a cingulectomy and in 5 Ss a frontal lobotomy had been performed several years previously without effect. In 11 of the Ss the amygdalotomy resulted in disappearance of, or marked reduction in, their aggressive episodes. In 2 Ss with frequent self-mutilations and reactive psychotic episodes, these symptoms disappeared after an additional

basofrontal tractotomy by G. Knight's method. (19 ref.)—*Journal abstract*.

Neurosis & Emotional Disorder

11213. Chinnian, R. Rawlin & Murthy, Vinoda N. (All-India Inst. of Mental Health, Bangalore) **Persistence and personality.** *Transactions of All-India Institute of Mental Health*, 1969(Dec), Vol. 9, 51-58.—Administered a battery of 4 persistence tests, 2 for physical persistence—leg persistence and dynamometer persistence and 2 for ideational persistence—problem solving and continuous addition test. 10 normal extroverts and 10 normal introverts, 10 neurotic extroverts and 10 neurotic introverts served as Ss. The relationship between persistence and personality in the Ss was studied. Personality grouping was based on the concurrence of results in at least 2 of the 3 personality tests—Neymann Kohlstedt introversion-extroversion questionnaire and Hysteroid-Obsessoid questionnaire, and an objective test, Spiral aftereffect. Normal introverts are significantly more persistent than normal extroverts. Neurotics as a group are not significantly different from the normals, though the neurotics had lower mean scores in the physical persistence tests. Within the neurotic group, neurotic introverts are significantly more persistent than the neurotic extroverts. (29 ref.)—*Journal summary*.
11214. de Natale, L. & Lamponi, S. (U. Naples, Clinic for Nervous & Mental Disease, Italy) **Differente azione dei colori nel processi percettivi di integrazione e di presa del significato nei normali e nei nevrotici.** [Significant differences in the action of the process of perceptive integration and comprehension of colors in normal and neurotic subjects.] *Acta Neurologica*, 1969(Nov), Vol. 24(6), 862-869.—Examined color interference and perceptive integration of color in 25 normal and 25 neurotic Ss using an adaptation of a test devised by A. Rubino and R. Santanelli. Results reveal that normal Ss displayed fast perceptive integration of reds and greens in early stages, while neurotic Ss demonstrated comprehension facility only with green shades. In further stages, comprehension of normal and neurotic Ss was similar. Results are attributed to diencephalic alterations present in neurotic Ss. (English summary) (41 ref.)—*B. A. Stanton*.
11215. Göppert, Hans. (29 Rotackerstr., Freiburg im Breisgau, W. Germany) **Die Rolle des Kindheitstraumas für Genese und Therapie der Neurosen.** [The role of traumatic childhood experiences for the development and therapy of neuroses.] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1971(Jan), Vol. 20(1), 14-20.—Spontaneous neuroses, like traumatic neuroses, represent fixations to earlier experiences. Since children show transference in play situations, the conflicts of an 11-yr-old boy are shown in a series of plays with the Sceno test. In a spontaneous process the child's conflicts are persistently worked over in the play series and maturational processes begin. Similar processes can be observed in dreams. However, the hypothesis of childhood trauma has only limited validity since each conflict points to the total maturational development. 2 ways of analytical therapy are possible: the therapist starts with the central conflict and finds its various branches, or the analysis is restricted to a more or less adventitious terrain.—*H. A. Euler*.
11216. Hart, James D. (U. Wisconsin) **Physiological responses of anxiety neurotics and normal controls to simple signal and non-signal stimuli.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6902.
11217. Kellner, R. & Sheffield, B. F. (U. New Mexico, Medical School) **The relief of distress following attendance at a clinic.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 195-198.—15 neurotics showed a decrease in Symptom Rating Test scores during a waiting period preceding initial psychotherapy, but not during subsequent waiting periods. This accords with other findings that there is an initial decrease in distress scores following attendance at a clinic without treatment. Perhaps drug trials or controlled tests of psychotherapy should be preceded by a period of testing and placebo treatment.—*R. L. Sulzer*.
11218. Kendell, R. E. & Discipio, W. J. (Inst. of Psychiatry, London, England) **Obsessional symptoms and obsessional personality traits in patients with depressive illnesses.** *Psychological Medicine*, 1970(Nov), Vol. 1(1), 65-72.—The Leyton Obsessional Inventory was given to patients with severe depressive illnesses, during their illness and after their recovery. Results and changes in the 2 different administrations were analyzed and correlated with other variables. Results showed that obsessional symptoms were typical manifestations and seem to be aggressive in nature. The tendency for the symptoms to worsen during depressive periods was common. Strikingly different were the scores between normal adults and depressives. Depressives' scores, even after recovery, were almost twice as high. Obsessional symptoms were equally common in psychosis and neurosis, however, they were more pronounced in severe depression than in mild depression. These symptoms were generally nonexistent in mania.—*H. Reiter*.
11219. Khan, M. Masud. **Infantile neurosis as a false-self organization.** *Psychoanalytic Quarterly*, 1971, Vol. 40(2), 245-263.—3 types of infantile neuroses are distinguished, the 3rd type of which is discussed. "Here the ego of the child has prematurely and precociously brought the traumata of early childhood under its omnipotence and created an intrapsychic structure in the nature of infantile neurosis which is a false-self organization, and which will henceforth set up a rigidity of split-existence and defensive exploitation of pregenital instincts and archaic mental functioning, most commonly met with in obsessional neurosis." A case history of an adult patient with an obsession illness is presented.—*J. Z. Elias*.
11220. Lienert, G. A. & Matussek, P. (U. Düsseldorf, Inst. of Psychology, W. Germany) **Der statistische Zusammenhang einiger Initialsymptome bei unbehandelten Fällen endogener Depression.** [The statistical relationship between several initial symptoms in untreated cases of endogenous depression.] *Nervenarzt*, 1971(Mar), Vol. 42(3), 124-127.—The symptoms of the 1st phase of 66 untreated cases of endogenous depression were subjected to a configuration frequency analysis. 3 subsyndromes resulted: (a) 10 patients with the symptoms guilt feelings, inhibitions, and anxiety, without psychosomatic sensations and agitation; (b) 5 patients with the symptoms psychosomatic sensations, agitation, inhibitions, and anxiety without guilt feelings; and (c) patients with the symptoms psychosomatic sensations and inhibitions without anxiety, agitation, and guilt feelings. The symptoms of Subgroup a as opposed to b and c correspond to separation of the symptoms of endogenous depression described by von Saltes and Hertich and empirically confirmed by Matussek, et al.

The suggested terms "away from me" and "close to me" symptoms bring to expression the idea that the structure of the ego and its defense mechanisms must be made corresponsable for the symptoms choice.—E. R. Wist.

11221. Mayo, P. R., Walton, H. J., & Littmann, S. K. (U. Sussex, Brighton, England) **Relevance of repression-sensitization to neurotic patients in milieu treatment.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 794.—30 female neurotic inpatients on admission completed Byrne's Repression-Sensitization (R-S) scale, a Symptom-Sign Inventory, and a Hostility Questionnaire. 2 psychiatrists independently rated these Ss on a series of measures relating to ward behavior and response to treatment. Sensitizers reported more symptoms, gave higher total hostility and intropunitiveness scores, and were prescribed more drugs. However, no relation was found between any of the psychiatrists' ratings, including patients' condition at discharge, and R-S. *Journal abstract.*

11222. McCranie, E. James. (Medical Coll. of Georgia, Atlanta) **The neurotic process.** *Psychiatric Quarterly*, 1970(Jul), Vol. 44(3), 422-434.—Presents a paradigm of neurotic illness, labeled "the neurotic process," that has proven useful in teaching and practice. The difficulties and inadequacies of the psychoanalytic model of neurosis based on traumatic childhood experiences, repression, and anxiety are discussed. A psychodynamic model is proposed to explain the neurotic process. Secondary symptoms are regarded as reactions or defenses against emotional arousal which consists of hurt, fear, anger, or combinations of these emotions. These in turn are reactions to stimulus situations, especially the frustration of needs, which are the result of inadequate and maladaptive behavior patterns and attitudes. These patterns of behavior and attitudes are considered to have been learned in the childhood experiences. It is suggested that this model provides a practical and theoretically satisfying basis for interviewing the patient and conducting psychotherapy. An interview with a 47-yr-old woman is presented with an analysis according to the model.—S. Knapp.

11223. Murphy, Solbritt; Nickols, Jackson; Eddy, Roger, & Umphress, Agnes. (U. Washington, Child Development & Mental Retardation Center) **Behavioral characteristics of adolescent enuretics.** *Adolescence*, 1971(Spring), Vol. 6(21), 1-18.—26 enuretic adolescent clinic patients were compared with 2 matched control groups for behavior symptomatology, psychiatric classification, and character traits (defined by Bell Adjustment Inventory). Results lend some support to existing theories attributing passivity, submissiveness, immaturity, and suppressed aggression to enuretics.—A. B. Warren.

11224. Rutchik, Allen I. (U. Miami) **Aspiration strategies in competitive and non-competitive situations in depression.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6911-6912.

11225. Slater, Eliot; Maxwell, Joyce, & Price, John S. (Bethlem Royal & Maudsley Hosp., London, England) **Distribution of ancestral secondary cases in bipolar affective disorders.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 215-218.—Out of 193 cases of bipolar affective disorder, 26 had 2 or more secondary cases of abnormality among family members. The data suggest polygenic transmission rather than major gene inheritance. Possible sources of bias are discussed.—R. L. Sulzer.

11226. Smail, D. J. (Saxondale Hosp., Nottingham Area Psychological Service, Radcliffe-on-Trent, England) **Neurotic symptoms, personality and personal constructs.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 645-648.—Foulds' Symptom-Sign-Inventories and Caine's Direction of Interest Questionnaire applied to 21 patients supported the hypothesis that neurotics complaining of somatic symptoms tend toward extroversion while psychic symptoms correlate with introverted thinking. The individual's conception of himself, of his interpersonal environment, and of his experience of stress may have an underlying homogeneity. Hence, patients may have personality-based preferences for the types of neurotic symptoms they develop.—R. L. Sulzer.

11227. Tan, E., Marks, I. M., & Marset, P. (General Hosp., Penang, Malaysia) **Bimodal leucotomy in obsessive-compulsive neurosis: A controlled serial enquiry.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 155-164.—24 patients who had had prefrontal brain operations were compared to matched controls over a 5-yr follow-up. Obsessions and general anxiety were reduced and work adjustment improved while personality changes were minimal. The findings with regard to obsessions and general anxiety are similar to those in a previous study on severe agoraphobia (see I. M. Marks, J. L. Birley, & M. G. Gelder, PA, Vol. 40:12953). (22 ref.)—R. L. Sulzer.

11228. Teichman, Meir. (Center for Research in Social Behavior, Columbia, Mo.) **Antithetical apperception of family members by neurotics.** *Journal of Individual Psychology*, 1971(May), Vol. 27(1), 73-75.—20 undergraduates were administered Landfield's revision of Kelly's Role Construct Repertory Test. Consistent with Adler's view of the antithetical mode of apperception in neurotics, Ss differed significantly from their well-adjusted controls in differentiating between family members.—A. R. Howard.

11229. Tigay, Barry & Kempler, Hyman L. (Wayne State U.) **Stability of WISC scores of children hospitalized for emotional disturbance.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 487-490.—Obtained test-retest data on the WISC for 25 children who had been hospitalized with emotional disturbances. An analysis of the reliability coefficients and difference between means showed stability on verbal subtests is as high or higher than reliabilities reported for non-disturbed Ss using test-retest methods. 1 exception is the Comprehension subtest on which emotionally disturbed Ss show considerably less stability than nondisturbed Ss. Stability on performance subtests is considerably lower for emotionally disturbed Ss than for nondisturbed in test-retest studies with the exception of Picture Arrangement which is more reliable than the test-retest data for normals. Performance and Full Scale IQ increases significantly on retesting.—*Journal abstract.*

11230. Wakeling, A. & Russell, G. F. (Inst. of Psychiatry, London, England) **Disturbances in the regulation of body temperature in anorexia nervosa.** *Psychological Medicine*, 1970(Nov), Vol. 1(1), 30-39.—11 14-34 yr. old female patients with anorexia nervosa and a control group of 11 18-25 yr. old females were studied in relation to body temperature regulation. Patients were tested in a malnourished state and after eating, in reference to the temperature of the oral and peripheral skin in response to a heat stimulus and a standard meal. Malnourished patients showed malfunctioning of the

temperature-regulating mechanism, abnormality of resting oral temperature, and reduced sensitivity of the central heat regulating mechanism. It is suggested that abnormalities may be indicative of defect in temperature regulation in anorexia nervosa which is linked with the feeding disorder peculiar to this illness. (32 ref.)—H. Reiter.

Psychosis

11231. Behrends, K., et al. (Free U. Berlin, Psychiatric & Neurological Clinic, W. Germany) **Quantifizierung psychotischer Symptome unter transkulturellen Aspekten.** [Quantification of psychotic symptoms according to transcultural aspects.] *Social Psychiatry*, 1971(May), Vol. 6(2), 66-72.—Describes the German part of a cross-cultural study of hospitalized patients diagnosed psychotic. Ss were studied from admission on the Inpatient Multidimensional Psychiatric Scale (IMPS). Computer-derived results show that in the German sample the same cluster of psychotic factors and syndromes prevailed as in the United States sample. It is therefore possible to compare types and degrees of psychotic behavior in different cultures through the IMPS independent of diagnostic classifications. (French abstract) (24 ref.)—English abstract.

11232. Brown, Jennifer. (Northern Illinois U.) **The cure and feeding of windigos: A critique.** *American Anthropologist*, 1971(Feb), Vol. 73(1), 20-22.—Suggests that, contrary to the view of V. Rohrl (see PA, Vol. 46:3424), the usual treatment of windigo psychosis is not nutritional in nature. When ingestion is involved (which is rare) its sequel (vomiting to expel the windigo heart of ice) is given more curative importance, challenging the view that the northern Algonquians somehow "grasped" the idea of a nutritive cure for windigos. There is no evidence, at this point, for clear nutritional causes for windigo.—Journal abstract.

11233. Goldberg, Arnold & Rubin, Bernard. **A method of pacification of the psychotic excited state: The use of the hospital as a transitional object.** *Comprehensive Psychiatry*, 1970(Sep), Vol. 11(5), 450-456.—Investigated excited psychotic patients in order to determine persistence of modes of childhood pacification. Hospitals were examined as to their making modes of pacification available and the patients' utilization of the hospital. Data showed that the hospital can be thought of as utilized by some patients as a transitional object, i.e., an unchanging, consistent, shared thing used for comfort and soothing. Further consideration of effectiveness of psychiatric hospitals are discussed. (30 ref.)—Journal summary.

11234. Hay, Thomas H. (U. Missouri, St. Louis) **The windigo psychosis: Psychodynamics, cultural, and social factors in aberrant behavior.** *American Anthropologist*, 1971(Feb), Vol. 73(1), 1-19.—Presents a brief survey of the nature of windigo psychosis, a form of cannibalism unique to the northern Algonquians. The psychodynamics of the disorder are considered to be essentially similar to those which produce cannibalism in other societies. The differential occurrence in the Algonquians is explained by the emphasis in that group on following inner impulses and the absence of cultural alternatives. It is suggested that the outcome for the individual experiencing heightened cannibalistic urges is a consequence of the relative control which those around him have over their own impulses: (a) if those around him are in good control, they can aid the windigo in

regaining control; (b) if their control is limited, they may become frightened and kill the windigo; and (c) if they are close to losing control themselves, they may unconsciously encourage the windigo and join him in cannibalistic acts. (35 ref.)—Journal abstract.

11235. Jönsson, L. E. & Sjöström, K. (U. Uppsala, Psychiatric Research Center, Sweden) **A rating scale for evaluation of the clinical course and symptomatology in amphetamine psychosis.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 661-665.—A rating scale consisting of 15 behavioral factors was used with 15 (13 males and 2 females, 18-35 yr. of age) cases of amphetamine psychosis. Agreement between raters obtained for each variable, and lack of concentration, delusions of persecution, increased motor activity, disorganization of thoughts, lack of insight, hallucinatory behavior, anxiety/fear, and suspiciousness characterized the 1st 2 days.—R. L. Sulzer.

11236. Krauss, P. (10 Silcherstr., Göppingen, W. Germany) **Über die in der Rehabilitationsabteilung der Privatklinik Christophsbad gemachten psychiatrischen Erfahrungen.** [Concerning psychiatric experiences in the rehabilitation department of the Christophsbad private clinic.] *Nervenarzt*, 1971(Mar), Vol. 42(3), 130-139.—Describes 5 yr. of experience with psychiatric patients in a small 10-bed private clinic for the treatment of psychoses. Criteria for the judgment of the readiness of a patient to assume the responsibility of a job outside the clinic, the nature of the continued contact with such patients, descriptions of the various sorts of behaviors exhibited by patients, and how they react to individual and group therapy as well as to the clinic environment are described in some detail. Evidence for the slow but significant improvement in the condition of patients with serious psychoses is stressed. Physicians who need quick success, have difficulty waiting, and who cannot be pleased with progress in small increments are asserted to be not properly oriented for the treatment of chronic mental illness.—E. R. Wist.

11237. Ödegård, Örnulv. (U. Oslo, Gaustad Psychiatric Hosp., Norway) **Hospitalized psychoses in Norway: Time trends 1926-1965.** *Social Psychiatry*, 1971(May), Vol. 6(2), 53-58.—Examined a case register comprising all admissions to psychiatric hospitals in Norway since 1916 for possible time trends during this period. Only minor changes were found to have occurred in the total incidence of psychoses and in their marital, occupational, and geographic patterns of distribution. This reflects a corresponding stability in socioeconomic conditions and in the development of mental health care in the country. (French & German abstracts)—Journal abstract.

11238. Perris, Carlo. (Umea U., Sweden) **Abnormality on paternal and maternal sides: Observations in bipolar (manic-depressive) and unipolar depressive psychoses.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 207-210.—Investigation of family records of 277 depressive psychotics produced a distribution of cases compatible with a polygenic genetical basis. This accords with previous findings that neither a single dominant nor a single recessive transmission can be held responsible for affective psychoses.—R. L. Sulzer.

Schizophrenia

11239. Bohn, Suzanne E. (Washington U.) **Temporal perspective, inner responsivity, and external re-**

sponsivity in schizophrenics and normals. *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6890.

11240. Cancro, Robert. (U. Connecticut) **Sophistication of body concept in process-reactive schizophrenia. Perceptual & Motor Skills**, 1971(Apr), Vol. 32(2), 567-570.—Hypothesized that there would be a linear relationship between the degree of differentiation of the body concept and the adequacy of the patients' premorbid sexual and social adjustment. The underlying basis for the process-reactive classification is unclear, although some authors offer differences in psychological differentiation as an explanation. The relationship between the degree of differentiation of the body concept and the process-reactive continuum was measured by the Prognostic Rating Scale and the subsequent total number of nights of hospitalization over a 3-yr period for 51 consecutive male admissions to psychiatric wards. There was no significant relationship—linear or curvilinear—between these variables in this sample of acute schizophrenics in whom drug ingestion, chronicity, and length of current hospitalization were controlled. (15 ref.)—*Journal abstract*.

11241. Duke, Marshall P. (Emory U.) **Reaction time and normetanephrine-metanephrine excretion under intense stimulation in chronic schizophrenics, nonpsychotics, and normals. Perceptual & Motor Skills**, 1971(Apr), Vol. 32(2), 579-586.—Examined differential predictions stemming from opposing arousal theories of chronic schizophrenia in terms of RT performance and metanephrine-normetanephrine excretion in arousing situations. Ss were 40 chronic schizophrenics, 25 nonpsychotic hospitalized patients, and 24 normal controls. All Ss were 25-40 yr. old males. It was found that schizophrenics and nonpsychotics both manifested behavioral deficit; schizophrenics' normetanephrine level was lower than that of other groups; reactivity of schizophrenics and normals, both behavioral and biochemical, was similar; nonpsychotics demonstrated a tendency toward no behavioral reactivity to intense stimulation but manifested a biochemical response not different from other groups. A theoretical conceptualization of behavioral and biochemical change in response to increasingly intense stimulation was developed utilizing 2 hypothesized cumulative reactivity functions.—*Journal abstract*.

11242. Fischer, Margit. (U. Aarhus, State Hosp., Risskov, Denmark) **Psychoses in the offspring of schizophrenic monozygotic twins and their normal co-twins. British Journal of Psychiatry**, 1971(Jan), Vol. 118(542), 43-52.—Since morbidity risk was not strongly different for a group raised by a schizophrenic parent as compared to a group raised by the normal twin of a psychotic, the results give no support to the hypothesis that environmental factors cause schizophrenia. The hereditary factor appears the most likely explanation. (35 ref.)—R. L. Sulzer.

11243. Greenspan, Barney. (Michigan State U.) **Differences in self-concept identification by a schizophrenic and non-schizophrenic prison population. Dissertation Abstracts International**, 1971(May), Vol. 31(11-B), 6901.

11244. Hawks, D. V. & Marshall, W. L. (Inst. of Psychiatry, Addiction Research Unit, London, England) **A parsimonious theory of overinclusive thinking and retardation in schizophrenia. British Journal of Medical Psychology**, 1971(Mar), Vol. 44(1), 75-83.—It was

hypothesized that in order to cope with information overload some schizophrenics decrease their rate of information processing but do not appear overinclusive, while others who do not learn to retard their rate appear overinclusive. 20 schizophrenics were classified as overinclusive or nonoverinclusive on the basis of the Chapman Card Sorting Test and the Babcock Digit Substitution Test. The card-sorting task was readministered under instructions to increase or decrease response rate. As predicted, the overinclusive schizophrenics were significantly less overinclusive and the nonoverinclusive schizophrenics more overinclusive on the 2nd trial of the card-sorting task. (1 p. ref.)—A. C. Bower.

11245. Hussar, A. E., Cradle, J. L., & Beiser, S. M. (Franklin Delano Roosevelt Veterans Administration Hosp., Montrose, N.Y.) **A study of the immunologic and allergic responsiveness of chronic schizophrenics. British Journal of Psychiatry**, 1971(Jan), Vol. 118(542), 91-92.—Immunization with diphtheria toxoid and subsequent quantification of the antibody response provided no evidence of an altered response by 21 schizophrenics vs. 15 controls.—R. L. Sulzer.

11246. Kahan, I. J. **Experiment in combatting a disease. Canada's Mental Health**, 1971(Mar), Vol. 19(2), 21-24.—Describes the goals, organization and structure, funding and membership, and organizational program of the Canadian Schizophrenia Foundation. The need for more effective treatment and rehabilitation, and a change in general attitude toward schizophrenia is emphasized.—P. Hertzberg.

11247. Kolyaskina, G. I. & Kushner, S. G. (Inst. of Psychiatry, Moscow, USSR) **O roli nasledstvennykh faktorov v vozniknovenii immunopatologicheskikh fenomenov pri shizofrenii.** [On the role of hereditary factors in the emergence of immunopathological developments in schizophrenia.] *Zhurnal Nevropatologii i Psikiatrii*, 1971(Feb), Vol. 71(2), 245-248.—Investigated the presence of complement-fixating anticerebral antibodies in blood serum in 104 parents and siblings of 69 schizophrenics in order to determine whether hereditary factors are involved in the formation of immunopathological processes in schizophrenia. The data showed that among these family members, including those without manifest signs of the psychosis, a concentration of individuals with anticerebral antibodies existed. In support of this finding, the following hypotheses are tendered: (a) The enhanced permeability of the membranes of cerebral nerve elements may be genetically involved, so that in response to the usual stresses conditions are created for the direct contact of lymphoid tissue with nerve tissue. (b) A special clump of lymphoid cells with enhanced sensitivity exists, for whose immunological activation a small number of cerebral antigens, entering the blood stream as a result of cerebral dissimulation, is sufficient. (English summary)—I. D. London.

11248. Mosher, Loren R., Pollin, William, & Stabenau, James R. (National Inst. of Mental Health, Chevy Chase, Md.) **Families with identical twins discordant for schizophrenia: Some relationships between identification, thinking styles, psychopathology and dominance-submissiveness. British Journal of Psychiatry**, 1971(Jan), Vol. 118(542), 29-42.—To explain the very different life courses of 2 genetically identical individuals raised in the "same" environment, patterns of identification, cognitive style,

psychopathology, and dominance-submissiveness in the family were investigated. Results show a clear pattern of the schizophrenic twin's identification being with the psychologically less healthy parent, most often the mother. Psychotic twins were also more global in cognitive style and were rated as identified with the more global parent. Schizophrenic twins were most often submissive. Mothers in these families tended to be dominant. A possible pattern is that an initially different twin, e.g., one with lower birth weight, may be differentially treated by an unhealthy parent. (33 ref.)—R. L. Sulzer.

11249. **Mukundan, C. R. & Murthy, H. N.** (All-India Inst. of Mental Health, Bangalore) **Skin potential in chronic schizophrenics: An assessment of level of arousal.** *Transactions of All-India Institute of Mental Health*, 1969(Dec), Vol. 9, 59-64.—The sample consisted of 18 male chronic schizophrenics of different subgroups with more than a 2-yr stay in a mental hospital. 8 normals served as controls. The 2 groups are compared on the basal level of skin potential and changes in the potential during anticipatory sound stimulus period, sound stimuli, anticipatory electric shock period and electric shock. Results show chronic schizophrenics do not differ from normals on the basal level of skin potential. Chronic schizophrenics do show less responsiveness than normals.—S. R. Diamond.

11250. **Muntz, Hilary J. & Power, R. P.** (Purdysburn Hosp., Belfast, Ireland) **Thought disorder in the parents of thought disordered schizophrenics.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 707-708.—Following D. Romney's (see PA, Vol. 44:10875) failure to confirm a hypothesized relation between thought disorder in schizophrenics and in their relatives, the Bannister Repertory Grid Test and the Mill Hill Vocabulary Scale were given to 32 parents of schizophrenics and matched controls. The expected positive relationship was demonstrated suggesting that parents may play some role in the creation or presence of thought disorder in their offspring, or vice versa.—R. L. Sulzer.

11251. **Nachmani, Gilead.** (Rutgers State U.) **An experimental study of the schizophrenic speaker process.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6908.

11252. **Neale, John M., Davis, Dan, & Cromwell, Rue L.** (State U. New York, Stony Brook) **Size estimation in schizophrenia: Some additional controls.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 363-367.—Studied size estimation in 14 hospital aides and the following groups of 14 male schizophrenics: (a) acute good premorbid paranoid, (b) acute poor premorbid non-paranoid, (c) chronic good premorbid paranoid, and (d) chronic poor premorbid nonparanoid. Unlike previous studies: (a) Ss were at optical infinity from the stimuli to eliminate possible micropsia or macropsia, and (b) stimuli were viewed with an artificial pupil. Contrary to previous findings, no significant differences occurred among the groups in level of size estimation. As in previous studies, the thematic content of the stimuli influenced size-estimation levels but this variable did not interact with S classification.—*Journal abstract.*

11253. **Nideffer, Robert M., et al.** (Vanderbilt U., Medical School) **The relationship of alpha activity to attentional sets in schizophrenia.** *Journal of Nervous & Mental Disease*, 1971(May), Vol. 152(5), 346-352.—Auditory RTs were gathered for 11 hospitalized schizo-

phrenic males and 10 normal males in both an eyes-open and an eyes-closed condition. RT stimuli were presented in both alpha and nonalpha states (as determined by EEG readings). There were "no overall group differences on the RT task," but schizophrenics had better RTs in the eyes-closed condition while normals had better RTs in the eyes-open condition. The eyes-open or -closed condition was shown to be a greater determinant of alpha state for schizophrenics than for normals. RT was best with a preparatory interval of 1 sec. for schizophrenics and 2 sec. for normals. (17 ref.)—R. Denis.

11254. **Oppenheimer, Hans.** (State U. New York, Downstate Medical Center, Brooklyn) **A hypothesis concerning the nature of schizophrenic dementia: A contribution to the psychopathology of the conflict-free ego sphere.** *Journal of the Hillside Hospital*, 1967(Jul), Vol. 16(3-4), 267-284.—Presents aspects in the language and thought pathology of dementia praecox which are usually called "formal." Desymbolization of the word, semantic shift, metonymic distortion, neologisms, asyndesis, system shifting, and sham language are discussed. The thought disorder of organic dementia differs from that of schizophrenia in that it is more in the nature of an orderly retreat than a disorganized rout. It has been suggested that the formal thought and language pathology in dementia praecox may spring from dynamic sources and aim at social goals, either by widening the gulf in communication for the sake of safety, or by narrowing it through the supposedly magical and restitutive quality of autistic verbal idioms. (17 ref.)—S. R. Diamond.

11255. **Parker, David A.** (U. California, Los Angeles) **The orienting response and performance in psychotic and normal children.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6953.

11256. **Pitt, Brice & Pollitt, Norman.** (Princess Alexandra Hosp., Churchill Clinic, Harlow, England) **Ascorbic acid and chronic schizophrenia.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 227-228.—Compared vitamin C levels in schizophrenics and controls to test previous reports of an association between psychosis and ascorbic acid depletion. No evidence of subclinical scurvy was obtained.—R. L. Sulzer.

11257. **Reed, J. L.** (St. Bartholomew's Hosp., London, England) **Schizophrenic thought disorder: A review and hypothesis.** *Comprehensive Psychiatry*, 1970(Sept), Vol. 11(5), 403-432.—Much of what is found in schizophrenic thought, speech, and writing occurs also in normal people. What is observed as schizophrenic thought disorder is not due to a qualitatively abnormal mechanism but rather to the use of normal ones in a quantitatively abnormal way. Diverse psychologic and neurophysiologic findings may be explained in terms of a filtering defect of both internal and external stimuli. This results in faulty judgments of the environment, leading to a failure in the formation of average associations, concepts, and constructs. This filtering failure also shows as a failure of differentiation of personal identity which is the basis of symptoms considered pathognomonic of schizophrenia whether expressed as delusions of passivity and influence or as failure to maintain ego boundaries. (161 ref.)—D. Prager.

11258. **Rieger, Norbert I. & Leiken, Stanley J.** (Camarillo State Hosp., Calif.) **Psychotic children attend community nursery schools.** *Hospital & Community Psychiatry*, 1970(Apr), Vol. 21(4), 122-123.

—Describes a program in which 50 severely regressed schizophrenic 4-10 yr. olds attended 1 of 5 community nursery schools for at least 1 1/2 day/wk. Each child received individual attention from teachers and volunteer assistants. Improvements in their ability to relate to peers and adults are noted. It is concluded that: "The community nursery school program has been enriching and educational not only for the children, but also for the hospital and nursery school staff members."—S. Knapp.

11259. **Resenthal, David.** (National Inst. of Mental Health, Lab. of Psychology, Bethesda, Md.) **A program of research on heredity in schizophrenia.** *Behavioral Science*, 1971(May), Vol. 16(3), 191-201. Describes a series of studies that purport to elucidate the possible role of hereditary factors in the etiology of schizophrenic disorders. The focus is on the design of experiments rather than findings, but some findings are reported which strongly support the role of heredity in such disorders. The studies described primarily use naturally occurring adoptions to examine the genetic and family-rearing variables. The design of 1 study is presented which is specifically intended to uncover heredity-environment interactions. (16 ref.)—*Journal abstract.*

11260. **Rutt, C. N. & Offord, D. R.** (Pennsylvania State U., Milton S. Hershey Medical Center) **Prenatal and perinatal complications in childhood schizophrenics and their siblings.** *Journal of Nervous & Mental Disease*, 1971(May), Vol. 152(5), 324-331.—Reviews previous studies relating prenatal and perinatal complications with childhood schizophrenia. Relevant data, in which siblings were used as controls, are presented and analyzed. No relationships between prenatal complications and childhood schizophrenia were found. However, findings show a significant correlation ($p < .01$) between perinatal complications and childhood schizophrenia. A significant correlation ($p < .001$) is reported between ego development, IQ, and age of hospital admission of childhood schizophrenics. (22 ref.)—*R. Denis.*

11261. **Schooler, Carmi & Silverman, Julian.** (National Inst. of Mental Health, Bethesda, Md.) **Differences between correlates of perceptual style and Petrie task performance in chronic and acute schizophrenics.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 595-601.—15 17-57 yr. old acute schizophrenics open to perceptual stimuli were receptive to emotional stimuli and intellectually able. Conversely, 35 chronics in the same age range maintaining active internal lives were inattentive to external stimuli. The Petrie procedure appeared uncorrelated with the Silverman kinesthetic figural aftereffect. Results show that overestimation after Petrie large-stimulus interpolation relates to passive behavior; overestimation after small-stimulus interpolation relates to good intellectual and psychological functioning among all, and among chronics to behavioral and conceptual expansiveness. —*Journal abstract.*

11262. **Silverman, Lloyd H.** (New York Veterans Administration Hosp., N.Y.) **An experimental technique for the study of unconscious conflict.** *British Journal of Medical Psychology*, 1971(Mar), Vol. 44(1), 17-25.—Discusses a series of studies using subliminal stimuli. 10 experiments with schizophrenics were found to intensify pathological thinking, pathological non-verbal behavior, or both, but usually as a delayed effect (2nd task). Long-term patients showed stronger effects.

Hospital employees "primed" for aggression produced pathological manifestations as well. Other studies revealed that supraliminal presentations are not effective. It is concluded that this technique can help the researcher elucidate the kind of dynamic interplay between underlying conflict and manifest behavior hypothesized by psychoanalytic theory. (1 p. ref.)—*A. C. Bower.*

11263. **Smith, Gudmund J., Ruuth, Egil; Franzén, Göran, & Sjöholm, Lena.** **Intermittent regressions in a serial afterimage experiment as signs of schizophrenia.** *Psychological Research Bulletin, Lund U.*, 1971, Vol. 11(4), 13 p. Tested 35 16-35 yr. old patients suspected of schizophrenia, 20 patient controls, and 31 undergraduates in a serial afterimage (AI) experiment. Ss were also rated on a psychiatric mental status scale. Ss with high psychotic scores showed 1 or more regressions to immature (size-constant, positive, physiognomic) images in their AI serials, images typical of children who cannot clearly distinguish their AIs as subjective phenomena distinct from the outside world. It is concluded that the AI test indicates schizophrenics to be characterized by intermittent withdrawal into a world where the self and nonself are not clearly distinguished. Regressions were rare in the 2 control groups. (17 ref.)—*Journal abstract.*

11264. **Stowens, Daniel; Sammon, John W., & Proctor, Albert.** **Dermatoglyphics in female schizophrenia.** *Psychiatric Quarterly*, 1970(Jul), Vol. 44(3), 516-532.—Studied the dermatoglyphics of 82 white female schizophrenics in a state mental hospital and compared them with those of 295 white, normal females. The palmar triradii and main lines, the location of the axial triradius, the determination of palmar patterns, fingerprints, and palmar creases were examined. Discriminant analysis indicated that the dermatoglyphic patterns were able to separate the 2 groups of Ss at the 82% level. The most important features in the patterns of the schizophrenics were (a) abnormal creases, (b) increased frequency in the number of arches on the fingers, (c) an increased number of Ss with 1 or more arches, (d) deficiency of the main line C of some degree, and (e) a decreased frequency of radial loops on the index finger. An ongoing validity study which will examine the prints from 600 patients at a state mental hospital is noted. (18 ref.)—*S. Knapp.*

11265. **Taylor, John F.** (Kent State U.) **Effects of interference upon the performance of process and reactive schizophrenics.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6269.

11266. **Torre, M., Vergani, E., & Gaia, S.** (U. Torino, Inst. of Clinical Psychiatry, Italy) **Livelli ematici di serotonina piastrinica in schizofrenici.** [Blood level of platelet serotonin in schizophrenics.] *Acta Neurologica*, 1970(Nov), Vol. 25(6), 740-746.—Examined the content of platelet serotonin by the spectrophotofluorimetry method in schizophrenics at the beginning of illness and in chronic cases of more than 10-yr duration and in institutions for more than 4 yr. In the cases of early stage schizophrenics, the values were not statistically significantly different from those in a control group. The chronic cases, however, had significantly higher values than those of 2 control groups, 1 of which was composed of normal Ss of equal age, and the other 1 of chronic cases of nonschizophrenics in the same institution and suffering from various mental illnesses. (21 ref.)—*English summary.*

11267. Tryon, Warren W. (Kent State U.) **A comparison of two models of behavior disorder: Social adaptation vs. anxiety-pathology.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6270.
11268. Tsuang, Ming-tso. (National Taiwan University Hosp., Taipei) **Abnormality on paternal and maternal sides in Chinese schizophrenics.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 211-214.—A family history search revealed 23 schizophrenics with 2 or more abnormal but not necessarily schizophrenic relatives. Analysis of the data shows a significant deviation to the unilateral distribution, supporting the hypothesis of a single dominant major gene in schizophrenic inheritance, as reported by E. Slater and M. T. Tsuang.—R. L. Sulzer.
11269. Tyler, Mary P. (U. Texas) **Schizophrenics' memory for semantic and syntactic aspects of sentences occurring in connected discourse.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6915.
11270. Williams, Jon E. (U. Maryland) **Effects of interpersonal and impersonal praise and censure on stimulus generalization in process and reactive schizophrenics and controls under response contingent conditions.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6916.
11271. Wood, Douglas D. (Illinois Inst. of Technology) **Parental identification in thought, feeling, and action in schizophrenic males.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6272-6273.
11272. Wright, David M. (U. Minnesota) **Impairment in abstract conceptualization in the parents of poor-premord male schizophrenics.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6273.
11273. Yarnell, Thomas D. (U. Southern Mississippi) **Purpose-in-Life Test: Further correlates.** *Journal of Individual Psychology*, 1971(May), Vol. 27(1), 76-79.—Examines the construct validity of the Purpose-in-Life (PIL) Test. Correlation coefficients between PIL scores and several other test measures derived from normal and schizophrenic Ss are presented.—A. R. Howard.
- group activities for 17 discharged young adult schizophrenic patients and their parents helped the expatients avoid rehospitalization by encouraging growth toward greater ego strength and improved socialization patterns. Problems which the group leader can expect to encounter in such a program are discussed and include the stigma of psychiatric hospitalization, the assertion of young adult independence, conflicting parent-child vocational or educational expectations, and intrafamilial communication difficulties.—*Journal abstract*.
11277. May, Philip R. (U. California, Neuropsychiatric Inst., Los Angeles) **Cost efficiency of treatments for the schizophrenic patient.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1382-1385.—Findings of a controlled experiment in which 5 treatment methods were compared by both clinical and cost criteria indicate that, for most schizophrenics, milieu care alone is both expensive and relatively ineffective. 228 1st-admission schizophrenics were assigned to (a) individual psychotherapy, (b) ataractic drug, (c) individual psychotherapy plus ataractic drug, (d) ECS, or (e) milieu, a control receiving none of the other treatments. In terms of cost/patient released and cost/case treated, it is far less expensive to provide the most effective available treatment than to merely provide a good level of milieu care without special additional treatment.—*Journal abstract*.
11278. Morris, P. A., MacKenzie, D. H., & Masheter, H. C. (Kingsway Hosp., Derby, England) **A comparative double blind trial of pimozide and fluphenazine in chronic schizophrenia.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 683-684.—With a sample of 30 male chronic schizophrenics, neither bis-para-fluorophenyl-butyl-piperidine (pimozide) nor fluphenazine was effective. Parkinsonian symptoms were less marked in patients taking pimozide.—R. L. Sulzer.
11279. Pentony, Joseph F. (U. Texas) **A comparison of two techniques of behavior therapy.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6909.
11280. Sachs, Lisbeth J. & Titievsky, Jaime. (New York Medical Coll., N.Y.) **Electroconvulsive treatment and the homosexual aspect of schizophrenia: A psychodynamic consideration.** *Journal of the Hillside Hospital*, 1967(Jul), Vol. 16(3-4), 205-218.—Presents a case study of the influence of shock treatment on the homosexual problems of the schizophrenic. The patient is a college student who throughout his life had been withdrawn, secluded, friendless, and overly attached to his mother. 6 mo. after admission electroconvulsive therapy (ECT) was instituted, and he received 13 treatments. The clinical improvement with ECT was spectacular in that after ECT homosexual drives were discharged. This case further documents the fact that discharge of homosexual drives can lead to marked improvement.—S. R. Diamond.

Schizophrenia Treatment

11274. Aleksandrowicz, Dov R. & Gaye, Zaphira. (Menninger Foundation, Topeka, Kan.) **A therapeutic club for schizophrenic adolescents.** *Bulletin of the Menninger Clinic*, 1971(May), Vol. 35(3), 199-202.—Recounts the experiences of a club approach as distinguished from a group therapy program. In "the club many of the youngsters became better organized in their activities, freer in their movements, more expressive and more interested in their peers. Some formed friendships, some became attached to 1 of the therapists, others seemed attached to the club itself. The group identification fluctuated, but eventually became well established."—J. Z. Elias.

(Hillside Hosp., Glen Oaks, N.Y.) **Multiple family group counseling of discharged schizophrenic young adults and their parents.** *Social Psychiatry*, 1971(May), Vol. 6(2), 88-92.—Reports that the 1st yr. of an after-care project involving multiple family group counseling and
11281. Vovin, R. Ya., Vol'ner, M. I., & Malakhov, B. B. (Bekhterev Psychoneurological Inst., Leningrad, USSR) **O reaktsiyakh na izmenenie trudovoi situatsii pri shizofrenicheskikh remissiyakh.** [On reactions to change in the work situation in schizophrenic remissions.] *Zhurnal Nevropatologii i Psikhiatrii*, 1971(Feb), Vol. 71(2), 262-268.—Studied the reactions of 40 schizophrenics with remissions of different types (20 paranoid, 15 apatho-abulic, and 5 psychopathoform) to a temporary change in ambulatory work therapy involving displacement to less skilled forms of activity, disliked by the Ss. Psychopathological changes were noted, and tests

of general biological reactivity were conducted. The character of the observed changes (intensification of symptoms, emergence of new disturbances) and their correlation with biological indices are described. The data confirmed (a) the great influence of work on mental state, and (b) the relationship between features of the work situation, on the 1 hand, and psychopathological and biological changes, on the other. (English summary) (17 ref.)—*I. D. London.*

PSYCHOSOMATIC DISORDER

CASE HISTORY

11282. **Däuner, I. & Remschmidt, H.** (Philipps U., Children's Clinic, Marburg, W. Germany) **Symptomwahl und Symptomenwandel bei einem Fall von psychogenem Schreibkrampf.** [Choice of symptom and symptom substitution in a case of psychogenic writer's cramp.] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1970(Oct), Vol. 19(7), 246-252.—Presents a short literature survey on development and treatment methods of psychogenic writer's cramp, and the case of a 12-yr-old boy who suffered from the cramp since 2nd grade. After unsuccessful applications of several treatment methods the boy was punished with electroshock to the right hand contingent upon appearance of the cramp. After 1 treatment session the cramp disappeared. Symptom substitution appeared temporarily in that the boy responded to stress in school with nausea and vomiting. Since the disappearance of the cramp the boy underwent a positive personality development. (26 ref.)—*H. A. Euler.*

11283. **Dietrich, Heinz.** (U. Munich, Neurochic, W. Germany) **Analyse eines Falles von "Délire des négations" (Cotard) bei einem Nervenarzt.** [Analysis of a case of "delire" des negations" (Cotard), in a neurologist.] *Nervenarzt*, 1971(Mar), Vol. 42(3), 140-143.—Analyzes a case of "delire" des negations" leading to suicide from the nosological, phenomenological, psychoanalytic, and existential viewpoints. At the center of this illness are the negations, psychosomatic and hypochondriacal delusions, autopsychic "madness of opposition," and aggressivity which indicate nihilism. Nosologically only a hypochondriacal involutional psychosis is involved, but consideration from several perspectives allows the richness of mental phenomena in this illness to be recognized.—*E. R. Wist.*

11284. **Goodwin, Donald W., Freeman, Frank; Ianzito, Benjamin M., & Othmer, Ekkehard.** (Washington U., Medical School) **Alcohol and narcolepsy.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 705-706.—A moderate amount of alcohol produced a coma-like state in a 24-yr-old man with narcolepsy. This response differed from a typical narcoleptic sleep attack. S could not be fully awakened for a several-hr period and electrophysiological data obtained during the episode were uncharacteristic of narcolepsy, showing slow-wave sleep and absence of REMs. It is unknown whether this represents a common response of narcoleptics to alcohol.—*Journal summary.*

11285. **Hanna, S. M.** (U. Sheffield, England) **Hypopituitarism (Sheehan's syndrome) presenting with organic psychosis.** *Journal of Neurology, Neurosurgery & Psychiatry*, 1970(Apr), Vol. 33(2), 192-193.—Described a 55-yr-old woman with hypopituitarism

presenting as an organic psychosis which lasted for nearly 2 yr. She slowly deteriorated and went into the precoma of hypopituitarism. When the diagnosis was made there was a dramatic response to treatment with hydrocortisone resulting in an apparently complete return to normality within 8 wk.—*Journal summary.*

11286. **Haynal, André.** (U. Geneva, Medical School, Switzerland) **Le médecin et sa patiente erotomaniaque: Contribution à la notion de "guérison dans le transfert."** [The physician and his erotomaniac patient: A contribution to the notion of recovery through transference.] *Annales Médico Psychologiques*, 1971(Jan), Vol. 11(1), 57-64. Describes a delusional patient who believed herself loved by her physician. Sleepless and agitated, she was seen as an ambulatory patient and during a brief hospitalization in a psychiatric clinic. The patient then transferred her delusions to the treating physician. This made it possible to identify the faults in thinking and begin restoration of the abnormal personality. The erotomaniac S is oral and avid, searching, as might an addict, for any object which can help. The "professional interest" expressed by the doctor is misinterpreted as a love he dares not declare. In treatment the physician must recognize the situation clearly and accept that the patient can have strong positive sentiments toward him. He must verbalize this acceptance but at the same time show that he cannot enter into the exaggerated and unreal demands made by the patient's weakened ego. In an atmosphere of response to the patient's most basic dependency needs, under transfer, he may lead her to discover the unconscious origins of her amorous sentiment.—*H. E. King.*

11287. **Hossain, M.** (General Infirmary, Medical Research Council Mineral Metabolism Unit, Leeds, England) **Neurological and psychiatric manifestations in idiopathic hypoparathyroidism: Response to treatment.** *Journal of Neurology, Neurosurgery & Psychiatry*, 1970(Apr), Vol. 33(2), 153-156. Describes 2 patients (a 54-yr-old female and 16-yr-old male) with idiopathic hypoparathyroidism who developed symptoms of dementia and chorea (Case 1), and epilepsy (Case 2) only when their serum calcium was low. The symptoms more or less disappeared when their serum calcium was maintained in the normal range. (17 ref.)—*Journal summary.*

11288. **Jablensky, A., Janota, L., & Shepherd, Michael.** (Inst. of Psychiatry, London, England) **Neuropsychiatric illness and neuropathological findings in a case of Klinefelter's syndrome.** *Psychological Medicine*, 1970(Nov), Vol. 1(1), 18-29.—Presents the case of a male with Klinefelter's syndrome with XXY karyotype and neuropsychiatric illness linked with the degeneration of cerebral white matter and cortical atrophy. Patients with Klinefelter's syndrome usually reveal a form of personality disorder and degrees of mental retardation. Hambert's electroencephalic findings are reported. The possibility of genetic abnormalities and disordered function and structure of the brain is seen in reference to clinical and pathological observations. (42 ref.)—*H. Reiter.*

11289. **Kleu, G. & Schulte, D.** (U. Marburg, Neurochic, W. Germany) **Verlaufsgestalt und Substitutionstherapie bei akuter Myxödem-Halluzinose: Ein Beitrag zur mehrdimensionalen psychopathologischen Funktionsdiagnostik.** [Developmental configuration and substitution therapy in acute myxedemic

hallucinosi: A contribution to multidimensional psychopathological functions diagnosis.] *Nervenarzt*, 1971(Mar), Vol. 42(3), 148-152.—Investigated the influence of substitution therapy with thybon (a drug distributed by Hoechst) on the developmental course of myxedemic hallucinosis with an acute onset over a 5-yr observation period. It was shown that during treatment-free intervals crisis with peaking of hallucinations and productive psychotic symptoms increased, while during long-duration consistent hormone substitution, symptoms of unreality and distance predominated. Periodic irritability and paranoid excitement states which also increased after the dying away of the grosser mental disturbances can be evaluated as extraendocrine, constitutional factors which have their origin in "primary defective" personality. The many leveled pathogenic and pathoplastic relationships can only be judged from a multidimensionally oriented perspective.—*E. R. Wist.*

11290. Lyle, J. G. (U. Sydney, New South Wales, Australia) **Cognitive dysfunction in childhood and adult psychosis.** *British Journal of Medical Psychology*, 1971(Mar), Vol. 44(1), 53-58.—Describes the case of a boy diagnosed as autistic and dysphasic in childhood. Although he staged a good recovery, he suffered a psychotic breakdown in adolescence. Hypotheses that long-standing difficulties in the processing of speech may lead to thought disorder are considered within this context. Aspects of his psychotic behavior in childhood and of his later schizophrenic-like behavior are considered as reactions and adaptations to his earlier cognitive dysfunctions and to his consequent social isolation.—*Journal summary.*

11291. Martin, Marian. (U. Arizona) **Acquisition of intelligible speech by a six year old twin.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6947.

MENTAL HEALTH & REHABILITATION

11292. Bindman, Arthur J. & Spiegel, Allen D. (Eds.) **Perspectives in community mental health.** Chicago, Ill.: Aldine, 1969. 5, 718 p. \$15.—Presents 55 articles examining historical theories, contemporary viewpoints, and future prospects in the field of mental health. Topics covered include (a) the meaning of community mental health; (b) elements of planning and development; (c) techniques and methods; (d) tasks, roles, and training of professional and nonprofessional mental health workers; and (e) research and evaluation.

11293. Goldensohn, Sidney S., Fink, Raymond, & Shapiro, Sam. (Queens-Nassau Mental Health Service of the Health Insurance Plan of Greater New York, Jamaica, N.Y.) **The delivery of mental health services to children in a prepaid medical care program.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1357-1362.—Describes a New York prepaid group practice plan which offered mental health services to children under 15 yr. of age during a 24-mo demonstration period. On an annualized rate basis, the psychiatric consultation rate was 12.6/1,000 enrollees and the treatment start rate was 8.6/1,000. The average number of services/patient during the 1st 12 mo. was 14.5. Among the children receiving treatment, 39% had another family member who was also in treatment. The case history of a 12-yr-old Negro boy with disruptive behavior in school is presented.—*Journal abstract.*

11294. Joshi, Purushottam. (U. Laval, Montreal, Quebec, Canada) **La santé mentale dans une per-**

spective historique. [Mental health in a historical perspective.] *Annales Medico-Psychologiques*, 1971(Feb), Vol. 1(2), 185-214.—Reviews the ways in which mental disorder has been described in different eras of Western history, from the Middle Ages to the present. The methods of cure or treatment available to a period can be seen to affect the very definition of the problem. Thus, the strong religious emphasis of the Middle Ages gave rise to a concept of possession by demons as the cause of aberrations in behavior. Later, in the 19th century, the successful treatment of other human ills by physical medicine altered prevailing notions on the origins of peculiar behavior to place its likely beginnings within the body; by reason of the faulty operation of physiological mechanisms. When effective psychological treatment methods became available, at the turn of the century, ideas on the etiology of mental disorder shifted yet again to insist on their psychological origin. Most recently, the potential for deliberately effecting social change has begun to modify once more our concepts of the causation of disordered behavior, this time centering on group value systems, social influence and pressures, etc. (61 ref.)—*H. E. King.*

11295. Lawlis, G. Frank. (Texas Technological U.) **A psychological view of the chronically unemployed: Personality and motivation.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 838. Compared 75 chronically unemployed Ss with a matched group of 75 stably employed Ss on motivational and personality variables assessed by the Motivational Analysis Test and 16 PF. The chronically unemployed showed significantly less assertiveness, less expressed self-sentiment, more career conflict, less total motivation, more total conflict, less self-concept control, and more emotionality and apprehensiveness than their employed counterparts.—*Author abstract.*

11296. Talbott, John A. & Talbott, Susan W. (St. Luke's Hosp. Center, Div. of Community Psychiatry, New York, N.Y.) **Training police in community relations and urban problems.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 894-900.—Describes a training program in community relations and urban problems involving 32 17-20 yr. old police trainees in New York City. The program enabled them to function effectively as bridges between the police and community youth. A typical weekly course schedule is included. The expansion of such programs reflects the realization that the policeman is the primary service agent for most urban residents, that community service is a vital part of police work, and that efforts to improve community mental health must involve all purveyors of service in the community. (27 ref.)—*Journal abstract.*

11297. Walls, Richard T., Miller, John J., & Cox, Janet. (West Virginia U.) **Delay of reinforcement and training choice behavior for rehabilitation clients.** *Rehabilitation Counseling Bulletin*, 1970(Dec), Vol. 14(2), 69-77.—Investigated the correlates of voluntary delay of gratification among 132 clients in vocational rehabilitation. 3 conditions were studied: (a) certainty of job, (b) levels of immediate salary, and (c) length of training duration. Analyses of variance indicated that Conditions a and c were significant at the .01 level, but Condition b was insignificant. This indicates that when the client is uncertain of obtaining a job for which he trains and when the time spent in training is lengthened, his motivation for increasing his training diminishes. The relationship of delay of job gratification was also studied

with respect to (a) control of expectancy, (b) anxiety, and (c) need achievement. These variables were measured by Rotter's Locus of Control Scale, Taylor's Manifest Anxiety scale, and Edwards' need for Achievement scale. Chi-squares indicate that a was significant at the .01 level. The clients with internal control expectancy preferred a short training period with gainful employment rather than receiving welfare grants. Those with external control preferred the converse.—A. J. Ter Keurst.

COUNSELING & GUIDANCE

11298. Blatt, Martin R. (Temple U.) **An investigation of intervention as it relates to motivation for counseling.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6889.

11301. Cottle, William C. & Downie, N. M. (Boston Coll.) **Preparation for counseling.** (2nd ed.) Englewood Cliffs, N.J.: Prentice-Hall, 1970. x, 420 p. \$8.95.

11302. Hart, Joseph L. **Pastoral counseling and individual psychology.** *Journal of Individual Psychology*, 1971(May), Vol. 27(1), 36-43.—Illustrates the usefulness of Adler's individual psychology for the pastoral counselor in general and the Roman Catholic priest in particular. (24 ref.)—A. R. Howard.

11303. Ingwell, Richard H. (U. Missouri) **The relationship between perceived empathy, genuineness, and warmth, and conditions of charisma, and external counseling conditions.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6258.

11304. Janofsky, Annelies I. (U. Oregon) **A study of affective self-references in telephone vs. face to face interviews.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6258-6259.

11305. Sieka, F., Taylor, D., Thomason, B., & Muthard, J. (U. Florida) **A critique of "Effectiveness of counselors and counselor aides."** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 362-364. —Presents arguments to refute the findings by C. Truax and J. Listar (see PA, Vol. 44:21344), that aides working alone were most successful in rehabilitating patients, while MA-level counselors working with aides were least effective. It is maintained that (a) the generalizations were not based on empirical data, (b) the criteria of treatment effectiveness were not adequate, (c) there was a lack of control for contamination of the criteria ratings, (d) the alpha level in the analyses of variance was not controlled, (e) other factors in the rehabilitative process were not controlled, and (f) there was a negative attitude towards students and MA-level counselors. S. Knapp.

11306. Stone, Le Roy A., Coles, Gary J., Sennett, E. Robert, & Sherman, Gail L. (U. North Dakota) **Multi-dimensional scaling used to evaluate students residing in a rehabilitation unit.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 879-886.—Applied the Stone-

Coles revision of Ekman's "content" model of multi-dimensional similarity analysis to judgments of person similarity made by 4 mental health professionals. The person-stimuli evaluated were 9 disturbed college student clients and 6 normal volunteers. 2 students in the latter category also served as judges. All judges appeared to share a common frame of reference, as only 1 fact emerged from a factor analysis of interjudge correlations. The factor analysis of a matrix of correlational similarities calculated from a matrix of mean similarities yielded 4 factors. These factors were 1st interpreted using clinical judgment and subsequently these interpretations were checked by correlations with MMPI variables. The 1st 3 factors were labeled: (a) action-oriented vs. overcontrolled, (b) sex, and (c) severity of disturbance. A small 4th factor was uninterpretable. (17 ref.) *Journal abstract*.

11307. Thoresen, Carl E. (Stanford U.) **The systems approach and counselor education: Basic features and implications.** *Counselor Education & Supervision*, 1969(Fal), Vol. 9(1), 3-17. —Postulates that counseling viewed as a complex of social-psychological processes—as an applied behavioral science—needs the framework provided by a "systems approach." A system in viewed as a structure which functions as a whole due to the interdependence of its parts. A systems approach in counselor education emphasizes how specific training components can be combined most effectively to produce outcomes stated in terms of trainee behaviors (performance). Basic characteristics of a systems approach include: (a) behaviorally stated performance objectives; (b) careful attention to relation of components; (c) information flow and feedback mechanisms; and (d) man-machine combinations. Models such as flow charts and simulation techniques are also typically involved. It is suggested that a systems approach will encourage the asking of more relevant and answerable questions, and holds the promise of more effectively preparing counselors for contemporary clients. (41 ref.)—*Journal abstract*.

11308. Truax, Charles B. (U. Calgary, Alberta, Canada) **"Effectiveness of counselor and counselor aides": A rejoinder.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 365-367. —Replies to the criticisms offered by F. Sieka, D. Taylor, B. Thomason, and J. Muthard (see PA, Vol. 46:Issue 6). It is maintained that (a) any rater bias by vocational instructors would have been against the aides; (b) repeated measures analysis yielded results significant at the .01 level; (c) the criteria were those used by a state rehabilitation agency and had been validated by administrators, field counselors, and job placement records; and (d) the study critiqued was 1 of a long series which have shown similar results. It is concluded that nonprofessionals are being employed by most state agencies in increasing numbers because they believe them to be effective by their own criteria.—S. Knapp.

Marriage & Family

11309. de Elejalde, Fernando. (Menninger Foundation, Topeka, Kan.) **Inadequate mothering: Patterns and treatment.** *Bulletin of the Menninger Clinic*, 1971(May), Vol. 35(3), 182-198.—Focuses "on those inadequate mothers who, by virtue of their circumstances, come to the attention of any social agency in any community. Their numbers are legion, and they

participate in that troublesome problem referred to by most social agencies as 'the multi-problem family.' The patterns of inadequate mothering are discussed and treatment approaches outlined.—J. Z. Elias.

Social Casework

11310. Atherton, Charles R., Mitchell, Sandra T., & Schein, Edna B. (U. Illinois, Jane Addams Graduate School of Social Work) **Using points for intervention.** *Social Casework*, 1971(Apr), Vol. 52(4), 223-233.—Uses the concepts of social roles and social systems to provide an intervention scheme for social workers in dealing with presenting problems. A chart which designates points for intervention, worker's role, and appropriate activity is presented. It is concluded that specification of a client's problems in these terms allows a more precise focus for effort; that limited designations of the roles in the role set help the worker to organize his efforts.—M. W. Linn.

11311. Crawford, Blaine. (Utah State Hosp., Youth Center, Provo) **Use of color charts in supervision.** *Social Casework*, 1971(Apr), Vol. 52(4), 220-222.—The color chart has also been found to be effective in helping students recognize and evaluate their own participation within an interview. It seems to work well with the student who is somewhat threatened by supervision. Having one's weaknesses or mistakes pointed out by colors on a piece of paper appears less painful and dilutes the personal threats that certain students experience with supervisors.—M. W. Linn.

11312. Crystal, David & Gold, Irwin H. (Jewish Family Service Agency, San Francisco, Calif.) **A social work mission to hippieland.** *Children*, 1969(Jan), Vol. 16(1), 28-32.—Describes the origin and history of a participant O and attendant services, such as location of runaways, provided in 1967 to the Haight-Ashbury hippie community. The section, its population, and behaviors are elaborated. The purposes were to (a) assess the proportion of Jewish youth involved, (b) cooperate with existing service programs, (c) report hippie needs to the San Francisco community, (d) determine variables leading to hippie membership, and (e) encourage youth to return to traditional community life. Problems encountered and frustrations in carrying out many of the programs are discussed. Several conclusions are drawn about individuals in the hippie movement.—D. T. Lekarczyk.

11313. Harder, Hans. (Social Science Inst., Hamburg, W. Germany) **Jugendfürsorgeliche Arbeit mit einem sechzehnjährigen Verwahrlosten.** [Youth welfare work with a sixteen-year-old neglected boy.] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1971(Jan), Vol. 20(1), 20-27.—Presents the case study of a truant and work-shy boy, including 2 interviews given verbatim, and the interpretation by the social worker.—H. A. Euler.

PHYSICAL HANDICAP

11314. Kerr, Nancy. (Arizona State U.) **Staff expectations for disabled persons: Helpful or harmful.** *Rehabilitation Counseling Bulletin*, 1970(Dec), Vol. 14(2), 85-94.—Recounts some of the experiences of a paraplegic confined to a wheelchair in her employment as a clinical psychologist in a hospital. Some of the problems of the handicapped are discussed from the viewpoints of being a 2nd-class citizen, whether or not such a person can be independent in her physical movements, and

whether or not she is capable of being a wage earner. Problems for research include the social structure of a hospital that can reinforce or frustrate the psychological progress of a patient, the quality of the physical and social restrictions placed on the patient, and the psychological adjustment of the patient to his own illness.—A. J. Ter Keurst.

11315. Paradowski, William & Ginzburg, Mele. **Mirror writing and hemiplegia.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 617-618.—A survey of 41 hemiplegics in a rehabilitation service showed only 1 case of frank mirror writing by a right-handed S with right hemiplegia. This proportion is considerably lower than others reported in the literature. S was also dyslexic, which supports M. Critchley's original hypothesis concerning the pathogenesis of mirror writing.—*Journal abstract.*

11316. Rider, Barbara A. (Capper Foundation for Crippled Children, Topeka, Kan.) **Effects of neuromuscular facilitation on cross transfer.** *American Journal of Occupational Therapy*, 1971(Mar), Vol. 25(2), 84-89.—Discusses an experimental study of the Rood techniques of neuromuscular facilitation with particular regard to their effects on the strength of contraction of elbow extensors. Ss were 16 children enrolled in the Capper Foundation for Crippled Children. 8 of the Ss had normal upper extremities and 8 were spastic bilaterally. Ss were facilitated only on 1 limb, 1/2 on the preferred side and 1/2 on the nonpreferred side. A 2-wk period of daily treatment using the Rood techniques resulted in an increase in strength of the facilitated muscle to a significant degree in both groups of Ss. The presence of cross-transfer was observed in the opposite, nonfacilitated limb. When facilitation was withdrawn for 2 wk., strength decreased to the nonfacilitation levels except in those Ss facilitated on the preferred side. It is concluded that the Rood techniques, used in a regular, daily treatment program result in an increase in strength of the muscle groups facilitated.—M. A. Seidenfeld.

Blindness & Visual Disorder

11317. Cole, Francis C. (Florida State U.) **Contact as a determinant of sighted persons' attitudes toward the blind.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6892-6893.

11318. Davidson, Phillip W. (George Washington U.) **Haptic judgments of curvature in blind and sighted humans: A study of the role of exploratory activity in perception.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6923-6924.

11319. de M. Klich, Beatriz & Wierig, George J. (Veterans Administration Hosp., Hines, Ill.) **Social interaction and emotional adjustment among the blind.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 516-518.—Tested the hypothesis that the level of a blind person's adjustment to his handicap is positively related to his involvement with a group of other blind persons. 41 blind veterans attending a rehabilitation program for the visually handicapped were rated by the staff psychologist and the director of mobility training as satisfactorily, fairly, or poorly adjusted to their blindness. Each S completed a questionnaire concerning his choice of friends from within the program and was designated as either having or not having membership in a group. Group members did have the highest level of judged adjustment.—*Journal abstract.*

11320. Freyberger, Patricia E. (State U. New York, Upstate Medical Center, Syracuse) **Comparative methods in teaching cooking to the congenitally vs. the adventitiously blind adult.** *New Outlook for the Blind*, 1971(May), Vol. 65(5), 149-151. —Because in home-making manuals distinction rarely exists between the congenitally blind and the adventitiously blind, suggestions are made concerning "habilitation" and "rehabilitation" in cooking activities. The congenitally blind have multiple perceptual problems, and therefore the approach has to be basic; the adventitiously blind only have to relearn known skills. Abstract terms should be avoided with the 1st group, and every verbal step in an activity demonstrated. The 2nd group needs only limited instructions. Almost pathological fears stemming from overprotective homes have to be overcome in the congenitally blind while the adventitiously blind have to cope with insecurities. Special adaptive cooking aids should be used; appropriate teaching levels should be established; brief intake interviews should be held concerning social background, prior rehabilitation training, and own evaluation of kitchen capabilities, and observations made about performances in routine kitchen activities. 3 test activities are described.—M. J. Stanford.

11321. Hintz, J. M. & Nelson, T. M. (U. Alberta, Edmonton, Canada) **Haptic aesthetic value of the golden section.** *British Journal of Psychology*, 1971(May), Vol. 62(2), 217-223. —Presented 14 rectangles, having width-length ratios ranging from .1-1, to sex and age matched groups of (a) 20 congenitally blind Ss, (b) 20 late blind Ss, (c) 40 blindfolded normal sighted undergraduates and university employees, and (d) 20 unblindfolded Ss from population c. While rectangular preferences of congenitally blind Ss questioned the existence of the golden section as a haptically satisfying figure, the preferences of late blind and sighted Ss generally confirmed the haptic aesthetic value of the golden section. Results indicate that the haptic perception of the golden rectangle as aesthetically pleasing is contingent on contact with the visual world. (25 ref.)—*Journal abstract*.

11322. Kim, Yoon H. (East Carolina U.) **The community of the blind: Applying the theory of community formation.** *American Foundation for the Blind, Research Series*, 1970, No. 22, 151 p. —Defined blindness functionally and tested hypotheses related to the theory that the blind form an internally polarized subcommunity. The theoretical base presented holds the relation of the blind to the sighted community as sociologically similar to the relation of other minority groups (racial, cultural) to the major community. 85 blind Ss were tested with 6 scales (perceived attitudes, group identification, community status, socialization, social control, economic orientation). The "results lend substantial support to the theory that the social life of blind persons is subject to the principles of community formation." (188 ref.)—W. E. Collins.

11323. McGuire, Lenore L. & Meyers, C. E. (California State Dept. of Mental Hygiene, Pacific State Hosp., Pomona) **Early personality in the congenitally blind child.** *New Outlook for the Blind*, 1971(May), Vol. 65(5), 137-143. —Studied 27 totally blind children of whom 12 were hospitalized in a state facility for the retarded in order to further information and theory of personality development of the congenitally blind. Limited literature on the subject exists. Ss were followed

for at least 1 yr. and up to 8 yr. with supplemental information covering histories from birth to about 4 yr. of age. Observation of Ss, home visit interviews with children and parents, information from therapy sessions, and from agencies', hospital, and school records form bases for study. Because of little difference in behavior of institutionalized and noninstitutionalized children, results were combined. Results indicate that: (a) most congenitally blind children are in the high risk category for personality problems, (b) these behavior disturbances have a psychogenic basis, and (c) they do not seem to be related to biochemical etiology of blindness. (16 ref.) —M. J. Stanford.

Deafness & Hearing Disorder

11324. Burke, Kenneth S. & Nilges, Thomas C. (Walter Reed Army Medical Center, Army Audiology & Speech Center, Washington, D.C.) **A comparison of three middle ear impedance norms as predictors of otosclerosis.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 52-58. —18 normal and 18 otosclerotic ears were compared to 3 previously published ranges of normal middle ear impedance. Differences were found in the way the 3 norms classified Ss as either normal or abnormal. Compliance measurements were found to be more predictive than resistance measurements when compared to normal ranges. However, otosclerotic ears regularly showed a greater resistance difference between low and high frequencies than did normal ears.—*Journal summary*.

11325. Clayton, Lawrence G. & Rose, Darrell E. (Zenith Hearing Aid Sales Corp., Audiological Services, Chicago, Ill.) **Auditorily evoked cortical responses in normal and recruiting ears.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 79-81. —Auditorily evoked response audiometry (ERA) was performed at 4 keps on 8 patients with unilateral hearing loss exhibiting complete recruitment. The normal ear was stimulated and ERA performed at 20- and 40-db sensation levels and at 85-95 db. SPL, whereas the recruiting ear was stimulated with equally loud tones as determined by actual balancing. A trend for the louder tone bursts to yield larger amplitudes of components N_1 , P_1 , and of P_1 , N_2 , may have been present in both types of ear, but was not statistically significant. Recruiting ears did not yield amplitudes different from normal ears within any level. Mean latency of any component N_1 , P_1 , N_2 , did not distinguish type of ear within any level, but for all components and for both types of ear the louder levels yielded shorter latencies in most comparisons. It is concluded that the data show that the condition of recruitment does not materially affect the response of an ear in ERA.—*Journal summary*.

11326. Conrad, R. (Nuffield Hearing & Speech Center, London, England) **The effect of vocalizing on comprehension in the profoundly deaf.** *British Journal of Psychology*, 1971(May), Vol. 62(2), 147-150. —Tested 12 normal hearing and 23 profoundly deaf schoolchildren for comprehension after reading prose passages either silently or aloud. The deaf Ss were known, from previously published studies, to comprise (a) a subgroup ($N = 12$) who primarily relied on articulatory coding to memorize verbal material, and (b) another subgroup ($N = 11$) who seemed more to rely on a visual code. Neither the hearing nor the deaf articulators showed a significant effect of reading mode. The visualizers

comprehended significantly less when they read aloud than when they read silently. Although the 2 deaf groups performed equally well after silent reading, after reading aloud the comprehension difference was significant at better than the .001 level.—*Journal abstract.*

11327. **Gengel, Roy W.** (Central Inst. for the Deaf, St. Louis, Mo.) **Practice effects in frequency discrimination by hearing impaired children.** *Journal of Speech & Hearing Research*, 1969(Dec), Vol. 12(4), 847-856.—Measured the DLs for frequency (DLF) at 250 and 500 Hz. of 23 10-17 yr. old deaf, 21 10-15 yr. old hard of hearing, and 7 10-12 yr. old normal hearing children. DLF was measured in 3 practice sessions in which conditions included both fixed amplitude, where loudness could be confounded with pitch, and variable amplitude, where loudness and pitch varied independently. Results indicate (a) significant decreases in size of the DLF over the 3 test sessions, in all conditions for the deaf Ss, and in the 500-Hz condition for the hard of hearing Ss; (b) asymptotic performance for normal Ss in the 1st test session; (c) a moderate correlation between hearing level and size of DLF at 500 but not at 250 Hz.; and (d) significant differences in performance between the fixed- and variable-amplitude conditions. The reliability and validity of the results are discussed. Some implications for teachers of the deaf are noted.—*Journal abstract.*

11328. **Hodgson, William R.** (Illinois State U.) **Misdiagnosis of children with hearing loss.** *Journal of School Health*, 1969(Oct), Vol. 39(8), 570-575.—Suggests that children with peripheral hearing loss are sometimes incorrectly diagnosed. Through a presentation of cases of hearing impaired children who were incorrectly diagnosed, the types of hearing loss that are likely to be evaluated erroneously are discussed.—*G. S. Spitzer.*

11329. **Locke, John L. & Locke, Virginia L.** (U. Illinois, Children's Research Center) **Deaf children's phonetic, visual, and dactylic coding in a grapheme recall task.** *Journal of Experimental Psychology*, 1971(Jul), Vol. 89(1), 142-146.—Administered lists of letters paired on the basis of phonetic, visual, or dactylic similarity to 56 deaf 14-20 yr. olds and 26 normal 10-14 yr. olds for recall. Analysis showed that the groups recalled at essentially similar levels, but confusion errors markedly differentiated the groups. Hearing controls (HCs) committed the most errors explainable on the basis of phonetic similarity, followed by deaf Ss with intelligible oral language (ID) and the unintelligible deaf group (UD). Visually and dactylically similar confusions were most apparent in UD Ss, followed by ID and HC Ss. While both groups of deaf Ss coded phonetically and/or dactylically in approximately equal (and small) numbers, more UD Ss rehearsed dactylically, and a higher proportion of ID Ss showed no rehearsal activity. Nearly all HC Ss coded phonetically. Deaf children's communication capabilities and their apparent coding strategies in short-term memory seem to agree rather closely. (17 ref.)—*Journal abstract.*

11330. **Martin, Frederick N. & Wofford, Martha J.** (U. Texas) **Temporal summation of brief tones in normal and cochlear-impaired ears.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 82-86.—12 normal-hearing and 12 cochlear-impaired adults traced fixed-frequency Békésy thresholds to pure-tone pulses at octaves of .25-8 kcps using stimulus durations of 20 and 500 msec., with 10-msec rise-fall time and 500-msec off-time. Differences in db. were computed between

thresholds at the 2 durations. The purpose was to standardize as simply as possible a test of temporal summation which could be introduced into the usual audiologic clinic, and partially to validate it on 1 class of auditory disorder. Mean data separated the 2 populations clearly but the inter-S variability was such that data for the 2 populations overlapped to some extent and differences did not quite reach formal significance at 25 and 1 kcps. Ss exhibited significant and markedly smaller threshold differences at the higher vs. lower frequencies, probably as a function of the greater losses at higher frequencies. 10 of the 12 Ss yielded differences smaller than the normal average at at least 2 of the 3 highest frequencies. It is concluded that use of this particular test is limited because of the overlap; and that the full diagnostic significance of brief-tone audiometry is yet to be completely explored.—*Journal summary.*

11331. **Olsen, Richard H.** (U. Denver) **The effect of rise time on the difference limen for intensity increments in normal and impaired ears.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6298-6299.

11332. **Schmitz, Henry D.** (Audiology Center of Redlands, Calif.) **Loudness discomfort level modification.** *Journal of Speech & Hearing Research*, 1969(Dec), Vol. 12(4), 807-817.—Investigated 3 assumptions involved in the rationale for loudness tolerance modification: (a) that an abnormal loudness discomfort level (LDL) is modifiable by sub-LDL stimulation, (b) that a relationship exists between abnormal LDL and reduced speech discrimination ability, and (c) that an improved LDL will result in better speech discrimination. 20 26-63 yr. old Ss with functional evidence of bilateral cochlear hearing loss were divided into 4 groups: 3 groups received a different type of sound exposure and 1 group served as a control. 20 21-43 yr. old normal hearing Ss served as a comparison group. LDLs were determined before, interjacent to, and after exposure. Results do not support the assumptions. The rationale for LDL modification therapy to improve speech discrimination appears to be unwarranted. Abnormal loudness discomfort improvement may involve adjustment problems more responsive to behavioral modification approaches. (32 ref.)—*Journal abstract.*

11333. **Thomas, Ian B. & Sparks, David W.** (U. Massachusetts, Speech Communications Lab.) **Discrimination of filtered/clipped speech by hearing-impaired subjects.** *Journal of the Acoustical Society of America*, 1971(Jun), Vol. 49(6, Pt. 2), 1881-1887.—A form of preprocessed speech known to be highly intelligible to normal listeners was heard by a group of 16 16-76 yr. old hearing-impaired Ss. The preprocessing technique involved high-pass filtering (cutoff 1100 Hz., slope 12 db/oct) and infinite amplitude clipping. Ss heard both unmodified and filtered/clipped word lists at 40-, 30-, and 20-db sensation levels. Discrimination scores for 13 out of 17 cases were significantly higher at 20- and 30-db sensation levels for filtered/clipped speech than for unmodified speech. (21 ref.)—*Journal abstract.*

11334. **Young, I. M. & Harbert, F.** (Jefferson Medical Coll., Philadelphia, Pa.) **Effects of direction of frequency sweep on Békésy audiometry.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 65-71.—Sweep-frequency Békésy audiometric tracings from pulsed or continuous tones were compared for threshold level and for peak-to-peak amplitude between upward and down-

of 100 male nonstutterers with those given by a matched criterion group of 50 male stutterers. A scale of communication attitudes (S-scale) was empirically derived on the basis of item responses that differentiated Ss. This scale was further refined by eliminating items that, in 2 additional groups of 70 stutterers and 44 nonstutterers, failed to demonstrate significant correlation with the dichotomy of stutterer vs. nonstutterer. Observed relationships between S-scale scores and (a) self- and clinician-ratings of stuttering severity, (b) self-ratings of improvement since beginning therapy, and (c) self-ratings and self-descriptions of reactions to social conversation suggest that the S-scale does provide information about attitudes of stutterers toward interpersonal communication. The scores obtained on this scale are related to other criterion measures of interest to the speech pathologist. (29 ref.)—*Journal abstract.*

11344. Peterson, Harold A. (U. Tennessee) **Affective meaning of words as rated by stuttering and nonstuttering readers.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 337-343. —Compared semantic differential ratings on evaluative and anxiety scales for a set of most- and least-stuttered words for 9 stuttering and 5 nonstuttering readers, all of whom stuttered while talking. No differences in word values were noted as a function of the instance of stuttering. Significant differences were noted between the 2 groups, however. Nonstuttering Ss assigned significantly lower affective meanings than either the stuttering Ss or 50 normal high school students. The consistency of word value ratings within both groups does not support a prediction of individual word stuttering as a function of word meaningfulness. —*Journal abstract.*

11345. Poppen, Roger, et al. (Stanford U., Medical School, Palo Alto, Calif.) **Visual sequencing performance of aphasic children.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 288-300. —Conducted 4 experiments with 5-12 yr. old aphasics (N = 15) and 7-11 yr. old normals (N = 9) to investigate the visual sequencing abilities of aphasic children. It was found that aphasic Ss (a) averaged about 75% correct on a task requiring them to press 3 panels in the same order that light flashed on the panels, (b) made more errors than normals when a time delay was introduced between the flashes and the opportunity for response, and (c) did worse on a variety of standardized sequencing tasks than normals. Dextroamphetamine sulfate improved the performance of some aphasic Ss on the delayed sequencing tasks. Significant correlations were obtained between the tasks for both aphasic and normal groups. Results suggest a general sequencing ability in which aphasic children are deficient. (15 ref.)—*Journal abstract.*

11346. Quarrington, Bruce; Seligman, Judy, & Kosower, Eleanor. (York U., Downsview, Ontario, Canada) **Goal setting behavior of parents of beginning stutterers and parents of nonstuttering children.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 435-442. —Studied the parents of young beginning stutterers and parents of nonstutterers to determine whether they differ in the goals they set for their children on a nonverbal task. 28 children in whom the stuttering duration did not exceed 8 mo. were compared to 28 nonstuttering controls matched for age, sex, and family occupation level. Parents were each placed in separate sound treated rooms from which they observed their child. After each set of 5 trials on the

Rotter board and child's score was reported to the parents, who then were required to estimate the child's subsequent performance score. Reporting of the child's score was controlled so that each parent was exposed to a standard schedule of fixed degrees of success and failures. The 2 groups of mothers differed significantly on 3 of the 4 measures considered, with the mothers of stutterers setting significantly lower goals for their children. The 2 groups of fathers did not differ significantly on the same 4 measures. Theoretical implications are considered briefly.—*Journal abstract.*

11347. Schuell, Hildred; Shaw, Robert, & Brewer, William. (U. Minnesota, Medical School) **A psycholinguistic approach to study of the language deficit in aphasia.** *Journal of Speech & Hearing Research*, 1969(Dec), Vol. 12(4), 794-806. —Intensively studied 3 protocols from 2 male aphasic Ss in the framework of generative linguistics. Each protocol contained more than 300 utterances elicited by instructing the S to read a word and use it in a sentence. These protocols, and protocols from 12 nonaphasic Ss, were compared over a number of syntactic and semantic dimensions. Aphasic Ss (a) showed restricted use of vocabulary and sentence types, (b) used fewer optional transformations, and (c) never elected a transformation that added words to the sentence. The frequency of double-based transformations used by aphasics was less than $\frac{1}{3}$ that of controls. Syntactically correct sentences produced by aphasics showed reduced semantic specificity. Results show that aphasic Ss have reduced lexical and semantic options, and operate under restrictions of length of unit that can be processed.—*Journal abstract.*

11348. Snyder, Lynn S. (Carmel Guild Hearing & Speech Diagnostic Center, Newark, N.J.) **Language impairment in children with perceptual-motor dysfunction.** *American Journal of Occupational Therapy*, 1971(Mar), Vol. 25(2), 105-108. —Offers a revised conceptualization of the relationships involved in language acquisition, auditory perception, and language differences with specific regard to the child who has both language and perceptual-motor impairments and the area of interaction between these 2 functions. Research suggests that language acquisition is a generative rather than imitative process and that auditory perception depends largely upon 3 factors: (a) intact temporal perception; (b) intact tactile and kinesthetic perception; and (c) intact memory. The child's comprehension of language spoken to him may be affected by differences in the language or by an impairment in any of the perceptual areas involved. This places stress upon the importance of the diagnostic assessment by the speech pathologist and the occupational therapist of the child with both perceptual-motor and language impairments. This in turn emphasizes the need to communicate with the child at a linguistic level that is meaningful to him.—*M. A. Seidenfeld.*

11349. Williams, Dean E., Silverman, Franklin H., & Kools, Joseph A. (U. Iowa) **Disfluency behavior of elementary-school stutterers and nonstutterers: The consistency effect.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 301-307. —Administered a speech task 2 times consecutively to 92 kindergarten through 6th grade stutterers and 92 matched nonstutterers. The kindergartners and 1st graders repeated a series of sentences, and the 2nd 6th graders read a passage. The consistency effect was observed in both groups, but by a higher percentage of the stutterers than

of nonstutterers. This difference could be at least partially accounted for by the fact that the stutterers' median frequency of disfluency on the 1st performance of the task was much higher than that of the nonstutterers.—*Journal abstract.*

11350. Williams, Dean E., Silverman, Franklin H., & Kools, Joseph A. (U. Iowa) **Disfluency behavior of elementary-school stutterers and non-stutterers: Loci of instances of disfluency.** *Journal of Speech & Hearing Research*, 1969(Jun), Vol. 12(2), 308-318.—Administered a speech task to 76 kindergarten through 6th grade stutterers and 76 nonstutterers. The kindergartners and 1st graders repeated 10 sentences after the E, and the 2nd-6th graders read a passage. All words judged to have been spoken disfluently were analyzed for the presence of each of S. Brown's (see PA, Vol. 20:128) 4 word attributes: initial phoneme, grammatical function, sentence position, and word length. Disfluencies were not randomly distributed. For both stutterers and nonstutterers, disfluencies occurred most frequently on words possessing the same attributes as those reported by Brown to be troublesome for adult stutterers. Findings demonstrate the essential similarity in the loci of instances of disfluency in the speech of (a) children and adults, and (b) stutterers and nonstutterers.—*Journal abstract.*

NEUROLOGICAL DISORDER

11351. Beteta, Edmundo; Gonzáles-Portillo, M. A., & Voto Bernales, J. (Peruvian U. Cayetano Heredia, Lima, Peru) **Primeras experiencias con la levodopa en el tratamiento del síndrome Parkinsoniano.** [First experiences with levodopa in the treatment of the parkinsonian syndrome.] *Revista de Neuro-Psiquiatría*, 1970(Jun), Vol. 33(2), 136-145.—Reviews the biochemical and pharmacological bases of research concerning the etiology and patogenia of the dopaminergic disturbance-syndromes. 16 parkinsonian patients of differential etiology and symptom severity were treated with L-dopa during a 6-mo evaluative period. Results of this study confirm previous reports that small doses of L-dopa fail to show encouraging results, although the incidence of side effects is reduced. It appears that 2-3 gm. of L-dopa combined with an anticholinergic agent and/or Ansejo's stereotaxicotomy is an effective treatment for both rigidity and tremor. It is suggested that L-dopa without side effects will be the best future medication for morbus Parkinson. (English, French, & German summaries) (35 ref.)—*L. M. Laosa.*

11352. Brotsky, Suellen. (Hackensack Hosp., N.J.) **Auditory figure: Ground perception in neurologically impaired children.** *Journal of Auditory Research*, 1970(Jan), Vol. 10(1), 5-10.—35 5-10 yr. old neurologically impaired children were compared with 35 matched normals in auditory figure-ground perception (spondee words in meaningful noises). A significant difference appeared between groups in error scores. Although the degree of complexity of the background stimulus did not significantly influence the individual performance, there appeared to be a trend in this direction.—*Journal summary.*

11353. Davis, Leo J., Osborne, David; Siemens, Peter J., & Brown, Joe R. (Mayo Clinic, Section of Clinical Psychology, Rochester, Minn.) **MMPI correlates with disability in multiple sclerosis.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 700-702.—Related the Hy-Pt

index, an MMPI-derived index of "repressive defenses," to independent ratings of disability in 58 cases of multiple sclerosis. Those Ss with Hy greater than Pt were more likely to show significant disability than were Ss with Pt greater than Hy. This was true for both vocational and general disability. Possible reasons for the above findings are discussed.—*Journal abstract.*

11354. Dehant, André & Albert, Francis. (U. Louvain, Lab. of Experimental Pedagogy, Belgium) **Étude de la mémoire du dyslexique.** [Study of the memory of the dyslexic.] *Revue de Psychologie et des Sciences de l'Éducation*, 1971, Vol. 6(1), 61-66. Tested whether the memory, considered as the persistence of the effects of a previous experience, is deficient in the case of a dyslexic subject, i.e., whether the observed mnemonic deficiencies are only the result of difficulties specific to the trouble by virtue of the functional relationship of memory with perception and intelligence. A series of 6 visual, auditory, and verbal tests consisting of 14 subtests by A. Rey, were applied to a group of dyslexic and normal Ss. As for the memory, considered as the simple persistence of the effects of a previous experience, the dyslexic Ss were no less handicapped than other children of the same age. But if the memory of a dyslexic S was affected, troubles appeared at the level of his functional dynamism in close relationship with intelligence and perception. (Flemish summary)—*English summary.*

11355. Dimitrijević, M. R. & Nathan, P. W. (U. Ljubljani, Yugoslavia) **Studies of spasticity in man: IV. Changes in flexion reflex with repetitive cutaneous stimulation in spinal man.** *Brain*, 1970, Vol. 93(4), 743-768.—Studied the flexion response to repeated stimulation to the skin of the leg in patients with the spinal cord divided and in normal Ss. The responses formed a pattern, with phases of build-up, fluctuation, diminution, and (in most cases) cessation. After habituation, stimulation of skin only 4 cm. away from the previous site reinstated a full response, which, however, habituated more rapidly than if there had been no prior stimulation of the 1st site. It is concluded that habituation occurs within interneuronal pathways in the cord somewhere near the afferent limb of the response, and that it may be due to changes in presynaptic inhibition.—*W. A. Wilson.*

11356. Fedio, Paul & Onmaya, Ayub K. (National Inst. of Neurological Diseases & Stroke, Bethesda, Md.) **Bilateral cingulum lesions and stimulation in man with lateralized impairment in short-term verbal memory.** *Experimental Neurology*, 1970(Oct), Vol. 29(1), 84-91.—Examined 3 male and 2 female patients undergoing bilateral cingulotomy for the relief of pain on standard clinical tests of intelligence and memory. Prior to therapeutic coagulation, performance on a short-term memory test was monitored during electrical stimulation with electrodes chronically implanted in the cinguli. A severe impairment in recall for verbal memoranda accompanied left, but not right, cingulum stimulation. In contrast, psychometric observations after bilateral cingulotomy failed to show comparable deficits in memory and intelligence achievement. This apparent dissociation in the presence of clinical improvement (a) adds support to the role of the cingulum as a modulator of emotional responsiveness, and (b) implicates more distal limbic mechanisms for memory function. (27 ref.)—*Journal abstract.*

11357. Jasnós, Theodore M. (U. Connecticut) **Some effects of lesion level, stimulus potency, and sit-**

uational cue on affective behavior in spinal cord patients. *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6715.

11358. **Mindham, R. H.** (Inst. of Psychiatry, London, England) **Psychiatric symptoms in parkinsonism.** *Journal of Neurology, Neurosurgery & Psychiatry*, 1970(Apr), Vol. 33(2), 188-191.—Describes a retrospective clinical study of 89 cases of parkinsonism treated in a hospital for mental illness. A high incidence of affective symptoms was found, with depression in 90% of Ss. The frequency of depressive symptoms was similar in the main etiological types and generally followed the onset of symptoms. Impairment of intellectual function was found in 1/3 of Ss. This was much more common in the index than in the control group. Cases of paralysis agitans and arteriosclerotic parkinsonism showed intellectual impairment with equal frequency, but it was less common in the postencephalitic group. Depressive symptoms often responded to treatment without an accompanying improvement in the physical state. It is suggested that changes in mood should be sought in all cases of parkinsonism as they are likely to respond to antidepressant treatment.—*Journal summary*.

11359. **Oller Daurella, L. & Márquez, J.** **El nexo de unión entre las crisis generalizadas no convulsivas y las crisis hemigeneralizadas: un caso de status de ausencias con crisis hemiclónicas aparecidas en el curso del mismo. Tratamiento por nitrobenzodiacepina intravenosa.** [The nexus of union between generalized nonconclusive crisis and hemigeneralized crisis: A case of absence status with hemiclonic crisis. Treatment with intravenous nitrobenzodiacepine.] *Archivos de Neurobiología*, 1969(Apr), Vol. 32(2), 219-232.—Studied a 4-yr-old S with status of absences characterized on the EEG by bilateral spikes and waves. S showed a left hemiconvulsive crisis and the same characteristics on the other side. After treating the S with mogadon, the crisis was terminated. It appears that the case corresponds to a form of the Lennox syndrome—without apparent cause, cryptogenic, and somewhat delayed. Interest lies in the following: (a) the establishment of 1 patient with generalized nonconvulsive crisis and hemigeneralized crisis, and the observation of the latter in the course of the status of absences; (b) the possibility of treating both types of crises by means of iv administration of nitrobenzodiacepine; (c) that the above cases can be considered another form of the Lennox syndrome; and (d) the possibility of a precocious treatment of the Lennox syndrome.—*A. M. Farfaglia*.

11360. **Wender, Paul H., Epstein, Richard S., Kopin, Irwin J., & Gordon, Edna K.** (National Inst. of Mental Health, Bethesda, Md.) **Urinary monoamine metabolites in children with minimal brain dysfunction.** *American Journal of Psychiatry*, 1971(Apr), Vol. 127(10), 1411-1415.

Brain Damage

11361. **Belmont, Ira & Handler, Alan.** (Albert Einstein Coll. of Medicine, Yeshiva U.) **Delayed information processing and judgment of temporal order following cerebral damage.** *Journal of Nervous & Mental Disease*, 1971(May), Vol. 152(5), 353-361.—The view that damage to part of the CNS leads to a delay in information processing by the injured portion was tested by requiring left hemiplegic patients and normal controls to judge the temporal order of 2 successively presented

auditory stimuli when 1 ear and then the other was stimulated first. The inertia hypothesis was confirmed by the finding that while normal individuals were accurate in their judgments of order of stimulation, the hemiplegic patients tended to report that the ear related to the affected hemisphere was stimulated last, independent of the objective order of stimulation.—*Journal abstract*.

11362. **Pendergrass, Virginia E.** (Veterans Administration Hosp., Miami, Fla.) **Effects of length of time-out from positive reinforcement and schedule of application in suppression of aggressive behavior.** *Psychological Record*, 1971(Win), Vol. 21(1), 75-80.—Utilized a procedure of temporary isolation (time-out from positive reinforcement) as a punishment contingent on aggressive behavior in a 5-yr-old brain-damaged girl. It was found that a long time-out period administered on an intermittent schedule was relatively ineffective in controlling the undesirable behavior, while a short time-out administered consistently produced substantial suppression. Spontaneous recovery of suppression at the beginning of each experimental extinction day indicated that retention of learning may persist over many days.—*Journal abstract*.

11363. **Turdiu-Simunc, Jelena.** (Neuropsychiatric Clinic of Medical Faculty, Zagreb, Yugoslavia) **Ispitivanje minimalnih cerebralnih distunkcija kod djece.** [An investigation of minimal cerebral dysfunctions in children.] *Revija za Psihologiju*, 1970, Vol. 1(2), 31-36.—Attempted to determine if there were any of the several psychological tests used that could serve as an indicator for "minimal cerebral dysfunction" in children—children who show no clear neurologic signs of cerebral lesions. For the same purpose a qualitative analyses of drawings and writings of the same children were made. Results demonstrate that for such evaluation a single psychological test is insufficient. Qualitative analyses of drawings and writings as well as qualitative analysis of responses obtained on different tests were more indicative of suspected lesion than quantitative data. (English abstract)—*A. Fulgosi*.

11364. **Woo-Sam, James; Zimmerman, Irla L., & Rogal, Richard.** (Rancho Los Amigos Hosp., Downey, Calif.) **Location of injury and Wechsler indices of mental deterioration.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 407-411.—Application of 4 Wechsler indices of mental deterioration to 95 cases of known head-injured Ss indicates that there are between-index differences, but that except for the Wechsler Revised index, locus of injury does not affect the efficiency of the indices. Ss were administered the Saunders index, the Allen index, and scores were obtained for the original Wechsler as well as the the revised Wechsler index. Findings were explained on the basis that trauma to the head results in 2 broad and measurable psychological effects: (a) generalized impairment of concentration and attention; and (b) depending upon locus of injury, additional impairments of selective coping skills. A mixed parietal injury appears associated with deficient conceptualization skills either verbal or motor. (15 ref.)—*Journal abstract*.

Epilepsy

11365. **Ikonoff, Stoyan Iv.** (District Hosp., Neurology Div., Westerstede, W. Germany) **Anticholinesterase drugs and epileptic seizures.** *British Journal of Psychiatry*, 1970(Dec), Vol. 117(541), 679-

680.—Nivalin and syntostigmin were tested with 14 epileptic patients. Results indicate that syntostigmin, which has a good tolerance and no toxic effect, was an effective therapeutic agent capable of producing positive improvement in 6-9 mo. of treatment.—*R. L. Sulzer.*

11366. Viukari, N. M. (U. Helsinki, Finland) **Low potassium levels in the cerebrospinal fluid of forty mentally subnormal epileptics.** *Journal of Mental Deficiency Research*, 1970(Sep), Vol. 14(3), 191-195. —Studied cerebrospinal fluid samples of 40 14-40 yr. old Ss in 3 serial determinations. The potassium levels were below the average of 3.3 meq/l. Several significant correlations were found between serum potassium, other electrolytes, and potential of hydrogen. Insufficient activation of glycolysis and adenosine triphosphatase by potassium in relation to their activation by sodium is postulated to play a part in epilepsy. (20 ref.)—*R. V. Hamilton.*

MENTAL RETARDATION

11367. Baker, Bruce L. & Ward, Michael H. (Harvard U.) **Reinforcement therapy for behavior problems in severely retarded children.** *American Journal of Orthopsychiatry*, 1971(Jan), Vol. 41(1), 124-135.—6 severely retarded 6-9 yr. old children (IQ below 25) were treated in a small home-like living unit. The project emphasized the "total milieu" use of reinforcement techniques by regular attendants trained as therapists, and the behavioral measurement of both Ss and matched ward controls. Ss were evaluated by results obtained on the Peabody Picture Vocabulary Test and the Denver Developmental Screening Inventory. Treatment was generally effective, with less success obtained for retarded Ss who also presented psychotic behavior. (23 ref.)—*Journal abstract.*

11368. Baumeister, Alfred A. & Butterfield, Earl. (Eds.) (U. Alabama, Center for Developmental & Learning Disorders) **Residential facilities for the mentally retarded.** Chicago, Ill.: Aldine, 1970. vi, 405 p. \$12.95.—Presents papers by leading professionals in the field of mental retardation, including information on the history, structure, philosophy, goals, and operations of American residential facilities for the retarded, and suggestions for the more effective programming of institutions.

11369. Bixler, Edward O. (U. New Mexico) **The visual evoked potential and reaction time in the retardate.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6276.

11370. Brogle, James F. (U. Florida) **Performance of normals and retardates on Piaget's conservation tasks.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6870-6871.

11371. Carr, Janet. (U. London, Inst. of Education, England) **Mental and motor development in young mongol children.** *Journal of Mental Deficiency Research*, 1970(Sep), Vol. 14(3), 205-220.—A 2-yr longitudinal study of 45 mongol babies reared at home and 9 placed in foster homes and institutions with a matched (age, sex, and social class) normal control group revealed that the mongol children were significantly below the control group on the Bayley Infant Scales of Mental and Motor Development at 6 wk., declined rapidly to 10 mo., and less rapidly after that to 2 yr. Mean scores of boarded-out mongols were significantly below those who were reared in the home. Mean mental scale scores of mongol

boys were significantly ($p < .05$) below those of the girls.—*R. V. Hamilton.*

11372. Carter, C. H., Smith, G. F., & Schindeler, Joan. (Sunland Training Center, Orlando, Fla.) **Choanal atresia and bifid thumb associated with an abnormal D group chromosome.** *Journal of Mental Deficiency Research*, 1970(Sep), Vol. 14(3), 221-226.—Presents the case study of a mentally retarded male baby. S had an abnormally long lower limb of a D-group chromosome. The major clinical findings were: low birth weight, wide set eyes, broad base of nose, epicanthal folds, choanal atresia, large low set ears, micrognathia, congenital heart defect, genital abnormalities, puffiness and creasing of skin of the upper limbs, broad bifid terminal phalanx of thumb, clubbed feet, and delayed physical and mental development. It was not possible to identify the source of the extra chromosomal segment; the chromosomes of both parents and sibling were normal. (15 ref.)—*R. V. Hamilton.*

11373. Cowie, Valerie. (Queen Mary's Hosp. for Children, Carshalton, England) **Amniocentesis: A means of pre-natal diagnosis of conditions associated with severe mental subnormality.** *British Journal of Psychiatry*, 1971(Jan), Vol. 118(542), 83-86.—If fetal cells are obtained from the amniotic fluid in the 10th-18th wk. of pregnancy of a woman with high risk of bearing a subnormal child, diagnosis can lead to reassurance or the recommendation of therapeutic abortion. With amniocentesis, genetic counseling can move from quoting risk of recessive defects of 1 in 4 to positive prediction. This can result in relief from months of anxiety, and it is significant that mothers who have borne mongols are beginning to ask for amniocentesis when they become pregnant again.—*R. L. Sulzer.*

11374. Craft, Michael. (Oakwood Park Hosp., Conway, Wales) **A North Wales experiment in subnormality care.** *British Journal of Psychiatry*, 1971(Feb), Vol. 118(543), 199-206.—With perhaps 1,800 subnormals/million population in North Wales, about 845/million receive nursing care in hospital, while a program of extensive retraining, reemployment, and resettlement of subnormals makes it possible for the others to reside in local authority hostels or homes, or in private or approved lodgings financed by the government. Up to 1/2 the hospital population could leave, and would probably be better and happier in the community, but the financing of extra consultant leaders, improvement in staff, buildings, social workers, etc., seems questionable. (25 ref.)—*R. L. Sulzer.*

11375. Fabia, Jacqueline & Drolette, Margaret. (Harvard U., School of Public Health, Boston, Mass.) **Life tables up to age 10 for mongols with and without congenital heart defect.** *Journal of Mental Deficiency Research*, 1970(Sep), Vol. 14(3), 235-242.—Sex-specific life tables for the 1st 10 yr. of life were constructed for a series of 2,421 children with Down's syndrome born alive from 1950-1966 and for 2 subgroups, 691 mongols with congenital heart defect (CHD) and 1,730 mongols without CHD. The life tables showed that CHD mongols had much higher mortality rates. There was a sex differential in mortality among CHD mongols. The girls were least apt to survive the early years of life. There was no similar sex differential among non-CHD mongols. The higher mortality rates for CHD females were reflected in a significantly lower survival rate for females in the total group. (19 ref.)—*R. V. Hamilton.*

11379. Freundt-Thurne, Jaime L. & Sturmman, Erika. (Anglo-American Clinic, Lima, Peru) **Fenilketonuria: A propósito de dos observaciones en el Perú.** [Phenylketonuria: Two cases observed in Peru.] *Revista de Neuro-Psiquiatría*, 1970(Sep), Vol. 33(3), 189-203.—Reports on the 1st 2 diagnosed cases of phenylketonuria in Peru. The metabolic disorder, the symptomatology, and the importance of an early diagnosis are stressed in order to begin treatment as soon as possible and therefore obtain good results in the prevention of mental retardation. The diagnostic methods and the dietary treatments are discussed. (French & German summaries) (26 ref.)—English summary.
11380. Hambert, G. & Olanders, S. (U. Göteborg, Psychiatric Research Centre, Hisings Backa, Sweden) **Prevalence of excess Barr bodies in Swedish institutions for the mentally handicapped.** *Journal of Mental Deficiency Research*, 1970(Sep), Vol. 14(3), 263-265.—A buccal smear survey of all institutionalized mentally retarded males in 3 western counties in Sweden indicated that 6 of 778 Ss (.77%) were chromatin positive. The chromosomes of 4 Ss were examined and each had XXY sex chromosome complement. 1 of the Ss had symptoms of Down's syndrome and an extra G-group chromosome. The results confirmed that the incidence of chromatin positive males is less than that of antisocial mentally retarded males.—R. V. Hamilton.
11381. Jeffree, D. M. & Cashdan, Asher. (Manchester U., Hester Adrian Research Centre, England) **The home background of the severely subnormal child: A second study.** *British Journal of Medical Psychology*, 1971(Mar), Vol. 44(1), 27-33.—28 severely subnormal children living at home were matched individually with normal children for MA, sex, and socioeconomic background. It was predicted that the subnormal Ss would show a relative deficit on both stimulation and affection measures. On parental interview assessment the groups did differ significantly both overall and in the affection area; the difference in the stimulation area did not reach statistical significance. On 4 objective tests of experiences there were clear differences overall as well as on 3 of them taken individually. (20 ref.)—Journal summary.
11382. Kessler, Jane W., Ablon, Grith, & Smith, Edith. (Case Western Reserve U., Mental Development Center) **Separation reactions in young, mildly retarded children.** *Children*, 1969(Jan), Vol. 16(1), 2: 7.—Discusses the necessity of acknowledging the presence of anxiety upon separation from mother in retarded children, and suggests that all retardate nursery school and day care centers determine methods for dealing with separation reactions. The concept of retardates' readiness for nursery school is handled within the context of A. Freud's stages of school readiness. An experiment was carried out to examine how mildly retarded children react to their mothers' leaving. Children with CAs of 18-32 mo. and MAs of 19-32 mo. were divided into 2 groups (mildly retarded and average), 18 Ss each. Ss had not previously attended nursery school. Ss were observed in play groups when mothers were present and also when they were absent. With mothers present, both groups played on the same level; both groups regressed in play with mothers absent. Retardates appeared less able to cope with anxiety. Play groups for retarded children used as a transitional step to nursery school at a mental development center are discussed. Case Western Reserve University Groups accomplish progression from solitary to parallel play along with adjustment to gradual separation from mothers.—D. T. Lekarczyk.
11383. Koehl, R. H., Solitare, G. B., & Heffner, R. R. (Yale U., Medical School) **Lipomatous hamartoma involving the midbrain and cerebellum of a mentally retarded man.** *Journal of Mental Deficiency Research*, 1970(Sep), Vol. 14(3), 227-234.—A postmortem study of the quadrigeminal plate and the cerebellar vermis of a 32-yr-old mentally retarded male revealed malformations of the interior colliculi, cerebral aqueduct, several cerebellar folia, and the absence of a portion of the anterior medullary velum and cerebellar vermis. The common association of malformations of the brain and spinal cord, often of a dysraphic type, with CNS lipomata as well as the less well-defined relationship between intracranial lipomata and mental retardation is discussed. (28 ref.)—R. V. Hamilton.
11384. Martin, Jerry A. (U. North Carolina, Chapel Hill) **Controlling non-reinforced imitative behavior in severely retarded children.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6946.
11385. Mikkelsen, Margareta & Stene, J. (U. Copenhagen, Denmark) **Genetic counselling in Down's syndrome.** *Human Heredity*, 1970, Vol. 20(5), 457-464.—Reliable risk figures are available for regular trisomy G cases and the more common translocation types. In trisomic Down's syndrome risk figures depend on maternal age. In the maternal age group below 30 the available materials lead to an estimated risk of recurrence of 1-2%. In translocation cases the risk depends on the type of translocation and the sex of the carrier. In (DqGq) translocations, risk figures of about 10% have been estimated for female carriers. Nearly the same risk was obtained for females with (21q22q) translocation. For male carriers the risk could not be estimated separately, but it is considered to be small (at most a few per cent). (33 ref.)—Journal abstract.
11386. Narayanan, H. S., Rao, B. S., & Reddy, G. N. (Government Mental Hosp., Bangalore, India) **A report on two cases of phenylketonuria (PKU) detected during a chemical and chromatographic screening of mentally retarded patients.** *Transactions of All-India Institute of Mental Health*, 1969(Dec), Vol. 9, 31-

33.—Routine chemical and chromatographic screening of urine from 706 mentally retarded cases has detected 2 phenylketonuria cases in a sibship. The 1st case, a 7-yr-old male, was brought to the outpatient department for consultation with the complaint of restless behavior, peculiar sideways rocking movement of both hands, and inability to speak. His younger sister displayed more marked chemical and chromatographic tests. Her symptoms included marked hypotonia in both limbs, brisk reflexes, and elicitation of knee jerk results in an ankle clonus.—S. R. Diamond.

11387. Rundle, A. T. & Sylvester, P. E. (St. Lawrence's Hosp., Caterham, England) **The influence of retarded maturation on growth abnormalities in the mentally defective girl.** *Journal of Mental Deficiency Research*, 1970(Sep), Vol. 14(3), 196-204.—2 groups of mentally retarded girls, 52 with normal menarche (menarche before 14.4 yr.) and 35 with late menarche (after 14.4 yr.), were compared on the basis of linear growth. While it was possible to show that a late onset of maturation does contribute to delayed growth in stature, there were no detectable differences in several anthropometric criteria. (23 ref.)—R. V. Hamilton.

11390. Unkovic, Charles M. & Zook, Linn. (Florida Technological U., Orlando) **Mental retardation: The role of the counselor in the effective application of the case history and the family interview.** *Journal of School Health*, 1969(May), Vol. 39(5), 337-342.—Discusses the role of the counselor in helping parents of mentally retarded children.—G. S. Spitzer.

11391. Yanagisawa, S. & Shuto, T. (Yamaguchi U., Medical School, Japan) **Sex chromatin survey among mentally retarded children in Japan.** *Journal of Mental Deficiency Research*, 1970(Sep), Vol. 14(3), 254-262.—Sex chromatin screening tests, on Japanese mentally retarded children, were carried out on buccal mucosal cells, and sex chromosome constitutions were confirmed by peripheral blood leucocyte cultures. 18 of 2,164 males (.83%) and 12 of 1,519 females (.79%) were found to have sex chromatin abnormalities. The mean IQ of XXY males (60.4 ± 32) was higher than that of XXX females (46.3 ± 11.9). The males with an XXY sex chromosome constitution, although having greater individual variation, tended to be found among groups which were mildly subnormal. Thus, XXY males were frequently found more as pupils in special classes for mentally retarded than as inmates of institutions. (43 ref.)—R. V. Hamilton.

Learning & Motor Ability

11392. Baumeister, Alfred A. & Campbell, Cecil. (U. Alabama) **Formation of backward associations in paired-associates learning by normal children and retardates.** *Journal of Experimental Psychology*, 1971(Aug), Vol. 89(2), 298-305.—Compared the performances of normal and retarded children matched for MA on paired-associate (PA) learning tasks. In Exp. I,

128 Ss were stopped at different points in forward PA learning and tested for backward associations. Exp. II with 72 Ss compared unidirectional (A-B) and bidirectional (both A-B and B-A) PA learning. Results indicate that forward learning was only slightly stronger than backward learning for both S groups, and backward association strength remained fairly constant over the course of PA learning. Conditional probability analysis revealed that complete associative symmetry did not characterize the PA learning of normal Ss and retardates. Both normal children and retardates appeared to learn as well spontaneously in the backward direction as they did when they were required to form bidirectional associations.—*Journal abstract.*

11393. Dye, Murlon H. (North Texas State U.) **Some effects of social satiation and visual ambiguity upon retardates and normals.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6238.

11394. Gordon, Donald A. (U. Alabama) **The use of verbal mediation in the retarded as a function of developmental level and response availability.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6288-6289.

11396. Montroy, Pheryl; McManis, Donald, & Bell, Donald. (Eastern Washington State Coll.) **Development of time concepts in normal and retarded children.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 895-902.—Tested 18 normal and 18 retarded children, matched for MA at 3 levels (6, 9, and 11), for understanding of the time concepts of (a) simultaneity, (b) equality of synchronous intervals, and (c) order of events. For both groups, active ordering of observed events was more difficult than understanding of simultaneity or of equality of synchronous intervals. Understanding increased steadily with increases in MA, and a sequential order of development in time concepts was indicated. Ss at lower MAs understood simultaneity and equality of synchronous intervals better than active ordering of events, whereas at higher MAs these concepts were understood essentially equally. Results suggest a slower rate of development by retardates than by normals. Unequivocal acceptance of this finding was cautioned against due to confounding of IQ with MA level in the retarded Ss.—*Journal abstract.*

Training & Vocational Rehabilitation

PHYSICAL ILLNESS

11400. Abram, Harry S. (Vanderbilt U., Medical School) **The prosthetic man.** *Comprehensive Psychiatry*, 1970(Sep), Vol. 11(5), 475-481.—Presents problems confronting the psychiatrist in working with patients with artificial heart valves, cardiac pacemakers, and artificial kidneys. (20 ref.)—D. Prager.
11401. Alluisi, Earl A., Thurmond, John B., & Coates, Glynn D. (U. Louisville, Performance Research Lab.) **Behavioral effects of infectious diseases: Respiratory *Pasteurella tularensis* in man.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 647-668.—Average efficiency in the work of 8 male volunteers, as measured with the mean percentage of base-line performance, fell about 25% during the period of Ss' infection with *Pasteurella tularensis*. Behavioral measures included a multiple-task performance battery which required an S to time-share the performances of 6 tasks. Recovery 3 days after treatment had begun was incomplete, with performance averaging 10-15% below that of controls (2 double-blind hospital controls and a separate control group of 10 Ss).—*Journal abstract*.
11402. Burke, Jon F. (U. Oregon) **Relationship of life changes to illness.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6236.
11403. Gerstein, Offra B. (New York U.) **The relationship between perception of parental behavior, level of dependency, and vocational interest pattern in hemophilic young adults.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6401.
11404. Henrichs, Theodore F., MacKenzie, James W., & Almond, Carl H. (U. Missouri, Medical School, St. Louis) **Psychological adjustment and psychiatric complications following open heart surgery.** *Journal of Nervous & Mental Disease*, 1971(May), Vol. 152(5), 332-345.—Open heart surgical patients were examined for postoperative psychiatric complications. An MMPI was administered to assess psychological factors. Male patients suffered more postoperative complications than females. Males' protocols revealed anxiety, depression, and physical complaints; females' protocols revealed more anger, depressive discord, and "bizarre feelings." Preoperative psychiatric consultations are recommended for all open heart surgical patients. (28 ref.)—R. Denis.
11405. Liss, Jerome & Sharma, C. N. **Multi-generational dynamics in a case of ulcerative colitis.** *Psychiatric Quarterly*, 1970(Jul), Vol. 44(3), 461-475.—Examined the relationship between the patient's mother and her mother (the maternal grandmother) and the specific causes and consequences of ulcerative colitis symptomatology in a 36-yr-old housewife. The symptoms of ulcerative colitis began on the S's honeymoon 12 yr. before and are considered to reflect her anxiety over the loss of the symbiotic relationship with her mother. Data were obtained through interviews and the patient's medical records. Interviews with the patient's mother about her relationship to her mother revealed that the mother had been placed in foster home shortly after birth. Both women (a) seemed to participate in the fantasy that the patient was in some sense the grandmother, (b) perceived men as depriving and defective, and (c) treated their children in a manner encouraging a dependency which they could not satisfy. From the foster grandmother to the eldest son of the patient, aggressive behavior was noted to center around bowel movements and toilet facilities.—S. Knapp.
11406. Monteiro, Lois A. (Brown U.) **Social factors influencing the outcome of heart attacks.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6717.
11407. Rahe, Richard H., Gunderson, E. K., & Arthur, Ransom J. (U.S. Navy Medical Neuropsychiatric Research Unit, San Diego, Calif.) **Demographic and psychosocial factors in acute illness reporting.** *USN Medical Neuropsychiatric Research Unit Report*, 1970, No. 69-35, 245-255.—Followed 2,684 Navy and Marine Corps personnel aboard 3 United States Navy cruisers during a 6-8 mo. overseas deployment in terms of all reported illnesses, with special reference to type and severity. $\frac{1}{3}$ of the Ss had no dispensary visits during the cruise. $\frac{1}{4}$ reported a single illness episode, and the remainder experienced multiple illnesses during their time at sea and in port. The great majority of illnesses reported were minor in severity, i.e., respiratory, gastrointestinal, genito-urinary, dermal, and musculo-skeletal disorders. Illness reporting was seen to be greater for younger than for older Ss; it was higher among Negroes as compared to Caucasians, and was the lowest for Filipinos; and it was higher for Ss with lower than average educational attainment. Illness reporting varied according to the S's occupation and showed a negative, linear correlation with job satisfaction. The timing of illness reporting was seen to vary according to the ship's operational schedule—reaching its peak during times when ships approached and took part in combat operations. Times of lowest illness reporting were seen when the Ss were relaxed and experiencing light work loads, and also during periods where they were meeting a new and challenging situation. A positive and roughly linear relationship was suggested between the number and/or intensity of Ss' precruise life changes and their cruise period illness rates.—*Journal abstract*.
11408. Rahe, Richard H., Mahan, Jack L., & Arthur, Ransom J. **Prediction of near-future health change from subjects' preceding life changes.** *USN Medical Neuropsychiatric Research Unit*, 1970, No. 70-18, 401-406.—Tested the life change and subsequent illness hypothesis utilizing 2,664 men aboard 3 United States Navy cruisers, who completed a life changes questionnaire prior to a 6-8 mo. cruise. Cruise period illness data were subsequently gathered on over 90% of those Ss sampled by questionnaire. Results, across ships, indicate a low-order, positive relationship between Ss' precruise life change intensity and number of reported illnesses throughout time at sea. In support of previous retrospective pilot studies, a linear relationship was seen between the Ss' recent life changes intensities and their cruise period illness rates. (23 ref.)—*Journal abstract*.
11409. Richards, Whitman. (Massachusetts Inst. of Technology) **The fortification illusions of migraines.** *Scientific American*, 1971(May), Vol. 224(5), 88-96.—Visual displays (fortification figures) during ophthalmic migraines provide evidence of feature detectors in the human visual cortex. Reverberation of the arc of fortifications suggests a neuronal network of reciprocal inhibition. The fortification figures suggest that detection of lines of a particular length and orientation characterizes the human visual system. Complex analyzers do not seem to be present at the level of the migraine disturbance. Serrations in the boundaries of fortification figures suggest that the neural substrate of the cortex is organized into discrete elements. The substrate of line detectors is apparently organized into a regular lattice, each line element having only 1 of 3 orientations and sampling visual space in the pattern of an asterisk (*).—P. Tolin.

11410. Smith, Ivor; Kellow, A. H., Mullen, P. E., & Harington, Edda. (Middlesex Hosp. Medical School, London, England) **Dietary migraine and tyramine metabolism.** *Nature*, 1971(Mar), Vol. 230(5291), 246-248.—Investigated tyramine metabolism in normal controls and in dietary migraine Ss. All Ss (age 45 and over) were placed on diets free of drugs and of foods containing tyramine. 24-hr urine samples were collected initially and during the 2nd day following oral administration of 100 mg. tyramine. Tyramine excretion was determined via Oate's extraction procedures followed by additional isolation via chromatography. Results demonstrate that migraine Ss excreted significantly less tyramine than did controls both before and after ingestion of the 100-mg dose of tyramine ($p < .01$). Ingestion of 100 mg. of tyramine increased free tyramine excretion by .1 mg. It is suggested that if the total urinary tyramine were of dietary origin, it would, of necessity, have to correspond to a dietary intake of 500 mg. In addition, the patient would suffer from a constant migraine headache. It is concluded that urinary tyramine is endogenously derived, and that ingested tyramine is rapidly oxidatively deaminated. It is also proposed that dietary migraine results from a lack of the enzyme which is responsible for sulphate conjugation of tyramine.—B. A. Stanton.

11411. Smith, Marie A. (U. Denver) **Menstrual disorders: Incidence and relationship to attitudes, manifest needs, and scholastic achievement in college freshman women.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6354.

11412. Stanfiel, James D., Tompkins, William G., & Brown, Harriet L. (Howard U., Counseling Service) **A Daily Activities List and its relation to measures of adjustment and early environment.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 691-699.—Describes the Daily Activities List (DAL) as a self-report measure developed for a study of cancer patients which contains items denoting ordinary behavior of daily life (e.g., work and recreation). Correlations were obtained in 21 cancer patients receiving radiotherapy for DAL activity level with indices of current emotional well-being and certain factors of developmental history. More active Ss (high scorers on DAL) tended to manifest less anxiety and other kinds of psychological distress and received more favorable ratings of early environment. Reliability data are presented and issues of validity and conceptual interpretation are discussed.—*Journal abstract.*

11413. Vartapetov, B. A. & Demchenko, A. N. **Polovye rasstroistva pri patologicheskom klimakse u muzhchin.** [Sexual disorders in cases of pathological climax in men.] In B. A. Vartapetov & A. N. Demchenko, "Predstatel'naya zheleza i vozrastnye narusheniya polovoï deyatel'nosti." (See PA. Vol. 46: Issue 5) 139-167.—Discusses in terms of the available data and current theories (a) the factors which contribute to normal erection and ejaculation, and (b) those which impair performance in each regard at various age levels. A predominance of the inhibitory or the excitatory process in the cerebral cortex affects sexual activity differently. Characteristic of the former case is weakening of erectile capacity; characteristic of the latter is premature ejaculation. Sexual disorders may arise from exhaustion of the spinal erectile and ejaculatory centers. Spinal impotence is traced to either organic or functional injury of the cerebrospinal sexual centers. In the latter case, it is a consequence of bad sexual practices (prolonged masturbation, sexual overindulgence, coitus

interruptus). The hypothalamic-hypophyseal-gonadal system plays an important role in the genesis of sexual disorders. The so-called neuroreceptor form of impotence involves lesion of the peripheral receptors of the afferent pathways, primarily in the glans penis, prostate gland, seminal vesicles, and the posterior urethra. Weakening of erection with normal aging is gradual and accompanied by ejaculatory difficulties; with "pathological climax" it is sudden and is accompanied by premature ejaculation. Psychogenic factors either are involved in the latter case or become part of the ensuing complications.—I. D. London.

COMMUNITY SERVICES

11414. Abramson, Marc F. (San Mateo County Mental Health Consultation Service, Courts & Corrections Unit, Calif.) **Participant observation and attempted mental health consultation in a public defender agency.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 964-969.—Describes some problems of the psychiatrist working in a public defender agency. He deals particularly with plea bargaining, differences between therapeutic and legal approaches to offenders, the various "models" of criminal justice, and the public defender's comfort in his role. It is concluded that the mental health consultant may be more effective working with police, judges, or probation officers than with lawyers.—*Journal abstract.*

11415. Arnsen, Alan N. & Collins, Ruby. (National Inst. of Mental Health, Chevy Chase, Md.) **Treating low-income patients in a neighborhood center.** *Hospital & Community Psychiatry*, 1970(Apr), Vol. 21(4), 111-113.—Describes clinical experiences in an outpatient program of a neighborhood multiservice center with special emphasis on milieu therapy. Various techniques to make the service more accessible and appropriate to the population served are described. These include flexibility of time, the use of neighborhood resources, and avoidance of the medical model. It is noted that low-income patients tended to use the facility in a situational crisis and to stay away when problems improved. It is suggested that brief contacts with such patients may be sufficient in contrast to the more traditional "course of therapy" used in the treatment of middle-class patients.—R. Sivley.

11416. Bill, Aydin Z. (Southern New Castle Community Mental Health Center, Del.) **Social clubs help prevent readmission.** *Hospital & Community Psychiatry*, 1970(May), Vol. 21(5), 161-162.

11417. Black, Bertram J. (Albert Einstein Coll. of Medicine, Yeshiva U.) **Social work in health and mental health services.** *Social Casework*, 1971(Apr), Vol. 52(4), 211-219.—Explains directions and administration for delivering better health and mental health services. The main emphasis is on linking "geographic" system with "whole person" system and addressing it to needs of groups of people in local communities. Relevant social issues involved in planning services, and role of social workers in these areas are brought out.—M. W. Linn.

11418. Erickson, Gerald D. & Macht, Arthur J. (U. Manitoba, Winnipeg, Canada) **Providing local services for rural counties.** *Hospital & Community Psychiatry*, 1970(Apr), Vol. 21(4), 128-129.—Outlines the need for small, community-based facilities to provide rehabilitation and moderate- to long-term treatment for the mentally ill. The history of Wisconsin's county mental hospital system is briefly described. Recent

changes in the organization of that system provide a program of care for 4 largely rural counties with a population of 150,000. The plan utilizes a county psychiatric rehabilitation facility, a hospital providing moderate- to long-term care, especially for alcoholics, and a general hospital unit for patients with acute illnesses. State hospitals are rarely used and all types of care are considered appropriate for local services. It is concluded that aspects of this program may be useful to other mental health planning organizations.—S. Knapp.

11419. Fishman, Robert. (U. Pennsylvania, Medical School) **A conglomerate model for community mental health.** *Hospital & Community Psychiatry*, 1970(Apr), Vol. 21(4), 127-128.—Describes the conglomerate model of organizational development and its application to the field of community mental health. It was determined that the usual single-agency organization would be inadequate for the needs of a large urban area. The conglomerate model which evolved had a close relationship to 5 independent agencies and the state hospital system. Approximately $\frac{1}{2}$ the funds received by the center were distributed in the form of subcontracts to cooperating agencies for the provision of specialized services, e.g., treatment for alcoholics and psychiatric treatment for children. It is suggested that the conglomerate model (a) expands professional services within a geographic area, (b) reduces overhead costs, (c) increases professional efficiency, and (d) increases funds and services by utilizing a core of professionally trained staff. Although the effectiveness of the system has not been fully assessed, the reduction in admission rates in the state hospital from 23/mo to 1/mo is regarded as promising.—S. Knapp.

11420. Gottesfeld, Harry, et al. (Roosevelt Hosp., New York, N.Y.) **Community mental health.** *American Journal of Orthopsychiatry*, 1971(Mar), Vol. 41(2), 275-292.—Presents digests of 15 of the papers presented at the 48th annual meeting of the American Orthopsychiatric Association in 1971. Topics covered include crisis intervention in community mental health; day care centers; community and patient feedback in mental health planning; community resources through university and government social service agency collaboration; various aspects of community mental health planning; mental health administration dilemmas; use of volunteers; and services to the aged blind.

11421. Kramer, Milton & Young, Calvin. (U. Cincinnati, Medical School) **Ohio's professional workers receive training in community mental health.** *Hospital & Community Psychiatry*, 1970(May), Vol. 21(5), 153-155.

11422. Lennard, Henry L. & Bernstein, Arnold. (U. California, San Francisco Medical Center) **Dilemma in mental health program evaluation.** *American Psychologist*, 1971(Mar), Vol. 26(3), 307-310.—Considers 2 themes important to understanding problems of evaluating mental health programs: (a) new programs produce unintended consequences whatever their intended target, and (b) consensus on criteria to be applied is becoming difficult to achieve. It is suggested that a preferred strategy is to assume as broad a perspective as possible and to be continuously aware of unexpected "fall out" in the operation of the system. A primary task now is to discover more effective ways of monitoring the effect of new programs.—P. McMillan.

11423. Linn, Louis. (Columbia U.) **Psychoanalysis and community psychiatry: A new challenge and responsibility.** *Journal of the Hillside Hospital*,

1967(Jul), Vol. 16(3-4), 234-254.—Professional help is being extended to a large group of patients who were previously disregarded in the very communities in which they lived. Planning has recently been extended to include a vast new group of disorders which are a consequence of family and community disorganization. Psychoanalysis and "community psychiatry" are discussed in relation to 4 spheres: the world of normal living; the patient and client world; the comprehensive community mental health center; and a complex of local, state, and federal government agencies regulating patient care as well as private foundations. If the analyst is to do more than identify the psychopathology when it emerges and treat those patients who cross his path, he cannot remain indifferent to social forces which disrupt family life. Group psychology and the problem of leadership is discussed, and practical applications to community psychiatry are developed. (36 ref.)—S. R. Diamond.

11424. Lowenkopf, Eugene L. & Zwerling, Israel. (Albert Einstein Coll. of Medicine, Yeshiva U.) **Psychiatric services in a neighborhood health center.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 916-920.—Describes the operation of a neighborhood health center, with particular emphasis on psychiatric services. The main unit effecting delivery of all services is the health team, consisting of both professional and nonmedical personnel. The role of psychiatrist as consultant is discussed in this team context. 3 case examples are presented to illustrate problems of team leadership and the role of paraprofessionals.—*Journal abstract.*

11425. Mumford, Emily; Brown, Fred, & Kaufman M. Ralph. (Mt. Sinai School of Medicine, New York, N.Y.) **A hospital-based school mental health project.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 920-924.—Describes a pilot project designed to provide the wide range of services of a hospital-based team to a group of about 150 1st-3rd grade school children and their families. The team found numerous physical, mental, and social problems that had interfered with the ability of the target families to avail themselves of health services. It is concluded that the use of hospital-based teams working in the schools may offer the best approach to providing comprehensive and continuous help.—*Journal abstract.*

11426. Neufeldt, Aldred H. (Saskatchewan Dept. of Health, Saskatoon, Canada) **Planning for comprehensive mental health programs.** *Canada's Mental Health*, 1971(Mar), Suppl. 67, 12 p.—The planner of mental health services should concern himself with at least 3 phases of development: (a) he needs to identify and clarify the program's basic concepts so that clear goals can be established; (b) the actual structure of the program's operation, i.e., a consideration of personnel, facilities, and other resources needs to be drawn up; and (c) the actual program must be introduced so that some evaluation of its impact can be obtained. Of these 3, mental health planners characteristically expend the most time and effort on the 2nd phase to the detriment of the 1st and 3rd. An effort to foster keener awareness of the process of conceptualization (phase 1) and program implementation (phase 3) is attempted. Also comment is made on the use of available resources. (15 ref.)—*Journal abstract.*

11427. Ozarin, Lucy D., Feldman, Saul, & Spaner, Fred E. (National Inst. of Mental Health, Div. of Mental Health Service Programs, Chevy Chase, Md.) **Experience with community mental health centers.**

American Journal of Psychiatry, 1971(Jan), Vol. 127(7), 912-916.—Reports on experiences from site visits to federally funded mental health centers (245 are currently in operation). The most important findings were: (a) the formation of public and nonprofit corporations to serve as planning and fiscal agents facilitates the growth of local interagency networks of service; (b) the organizational structure of a center program determines its capability to deliver services; (c) citizen participation is vital for community support and program planning; and (d) manpower utilization is enhanced by the use of auxiliary mental health workers.—*Journal abstract*.

11428. Rogawski, Alexander S. & Edmundson, Betty. (U. Southern California, Medical School, Div. of Social & Community Psychiatry) **Factors affecting the outcome of psychiatric interagency referral.** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 925-934.—Only 42% of 334 patients referred to various community resources by a metropolitan evaluation unit completed the referral. Data about the Ss, referring professionals, referral technique, and receiving agency were correlated with the rate of completed referrals. The most significant success factor was the interest and involvement of the referring professional; surprisingly, patient characteristics and distance of patient residence from the community resource did not have a significant effect. (24 ref.)—*Journal abstract*.

11429. Schoonmaker, John & Thomas, Claudewell S. (State U. New York, Upstate Medical Center, Syracuse) **Mental health center attempts interracial public education.** *Hospital & Community Psychiatry*, 1970(Apr), Vol. 21(4), 123-126.—Describes 3 discussion programs in which mental health professionals and residents of an Italian-Negro community attempted to deal with sex, drugs, and community problems. There were 4 preliminary discussions and fall and spring sessions of 5 discussions each. The majority of the sessions were preceded with brief lectures on selected subjects, e.g., sex education, and were followed by discussions in small groups led by a professional. Although the participants expressed satisfaction with the professionals' ability to help them clarify issues and deal with them maturely, there was growing dissatisfaction with the inability of the professionals to provide quick and effective solutions to the community's problems. It is suggested that the programs might have been more effective if fewer professionals had taken part, the introductory lecture had not been used, and intimacies from the participants had been discouraged.—S. Knapp.

11430. Scoles, Pascal & Fine, Eric W. (West Philadelphia Community Mental Health Consortium, Pa.) **Aftercare and rehabilitation in a community mental health center.** *Social Work*, 1971(Jul), Vol. 16(3), 75-82.—Describes a program in which the community, state mental hospitals, and a community mental health center cooperate in providing an environment conducive to the continued well-being of chronic mental patients discharged from state hospitals. Data are presented from 64 female and 36 male patients who had been hospitalized for a mean duration of 9.1 yr., and were predominately schizophrenic and unmarried. Day care facilities were located as close as possible to Ss' place of residence. The Ss' self-government council determined and implemented programs for individuals and groups of patients. Activities involved learning social, interaction, and occupational skills. Individual and group counseling facilities are described, and problems of Ss living in the community are noted. Evaluation of the program after 3

yr. indicates (a) a 9% recidivism rate after 18 mo. (b) yearly costs of approximately \$1,000 that required for state hospitalization, and (c) reduction in the amount of medication required for 63% of the Ss.—S. Knapp.

11431. Stubblebine, J. M. & Decker, J. Barry. (Dept. of Public Health, Community Mental Health Services, San Francisco, Calif.) **Are urban mental health centers worth it?** *American Journal of Psychiatry*, 1971(Jan), Vol. 127(7), 908-912.—On the basis of experience in San Francisco, it is proposed that the community mental health center offers a viable and economical alternative to state hospital care for the mentally ill. Such centers are functioning reasonably well, and growing in size and range of tasks. However, serious problems remain, including the challenges of drug abuse, alcoholism, and childhood mental illness, as well as a wide range of organizational and administrative problems.—*Journal abstract*.

11432. Woodyard, Elsie B. (Michigan State U.) **A study of pre-intake dropout at St. Lawrence Community Mental Health Center.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6916-6917.

GERIATRICS

11433. Burnside, Irene M. (U. California, San Francisco) **Loss: A constant theme in group work with the aged.** *Hospital & Community Psychiatry*, 1970(Jun), Vol. 21(6), 173-177.—Discusses problems of the aged, gained from experience in working with a group of nursing home patients. The loss theme was observed most poignantly in cases with a deceased spouse. Other painful losses included (a) deaths of friends and relatives; (b) disabilities (particularly the loss of eyesight and memory); (c) loss of money and economic security; (d) loss of personal possessions (especially clothing); (e) loss of dignity; and (f) loss of independence. It is suggested that nurses can do much (by bringing creativity and enthusiasm) to their responsibilities to help ease the pain of such losses. Group work is considered useful in that it allows patients to discuss and share their losses.—P. Hertzberg.

11434. Burvill, P. W., Gruenberg, E. M., & Solomon, M. (U. Western Australia, Perth) **Comparative study of elderly Dutchess County patients in mental hospitals and nursing homes.** *Social Psychiatry*, 1971(May), Vol. 6(2), 61-65.—Compared point prevalence data for 3 populations of patients, aged 65 yr. and over: (a) mental hospital patients who became 65 yr. of age in hospital, (b) mental hospital patients who were 65 yr. old before admission, and (c) nursing home patients. The significance of similarities and differences between the 3 populations are discussed. The mental hospitals had 2 distinct geriatric populations: the aged-in and the aged-out. The aged-out population had more in common with nursing home patients than with the aged-in patients. It is suggested that the geriatric patients' place of abode, when the decision for long-term hospitalization was made, was a potent factor in determining whether he went to a mental hospital or a nursing home. (French & German abstracts)—*Journal abstract*.

11435. Levy, Raymond; Isaacs, Anthony, & Hawks, Gail. **Neurophysiological correlates of senile dementia: I. Motor and sensory nerve conduction velocity.** *Psychological Medicine*, 1970(Nov), Vol. 1(1), 40-47.—Investigated the relation between senile dementia and slowing of the peripheral nerve conduction velocity. 28 dementia patients and 19 controls were rated

clinically, given psychological tests, and their physiological reactions were recorded. Results were: (a) motor conduction was slower in dementia Ss than in controls, however, the difference was not significant; (b) demented S's scores above 7 had nerve conductions significantly slower than those with 7 or less; (c) a significant correlation was found between severity of dementia and the slowing of motor nerve conduction; (d) in patients who had rested 1 yr., increase in dementia was correlated with further slowing of motor conduction; (e) deficiency of thiamine, nicotinic acid, and vitamin B₁₂ were not significant. However, some patients showed low folate levels, which may be significant for the dementia and/or the peripheral nerve slowing. (33 ref.)—*Journal abstract*.

11436. Pichot, P., Girard, B., & Dreyfus, J. C. **L'échelle d'appréciation gériatrique de Stockton (S.G.R.S.): Etude de sa version française.** [The Stockton Geriatric Rating Scale (SGRS): Report of a factor analysis of a French-language version.] *Revue de Psychologie Appliquée*, 1970, Vol. 20(4), 245-254.—The 33-item Stockton Geriatric Rating Scale permits quantification of the degree of physical disability, apathy, willingness to communicate, and socially irritating behavior. Results are also reported of use of the scale for predicting adjustment to institutionalization and some type of treatments.—K. J. Hartman.

11437. Williams, Joseph R., Kriaciunas, Romualdas, & Rodriguez, Arthur. (Kankakee State Hosp., Ill.) **Physical, mental, and social rehabilitation for elderly and infirm patients.** *Hospital & Community Psychiatry*, 1970(Apr), Vol. 21(4), 130-132.—Describes a state hospital program for the intensive rehabilitation of chronic geriatric and nongeriatric patients with physical infirmities. The staff and physical facilities used are outlined. Screening of patients with potential for rehabilitation and community adjustment was accomplished by 5 members of the rehabilitation staff. Treatment involved physical, social, and occupational training. The treatment history of a 73-yr-old male who had been hospitalized for 11 yr. for chronic brain syndrome associated with senile brain disease is presented. After 10 mo. of treatment, the patient had progressed from a wheel chair to walking with 2 canes or a walker. He had become independent in his daily activities and his depression had been replaced with cheerfulness. Follow-up after discharge to a nursing home revealed a good adjustment. Of the 67 patients treated over a 1-yr period, 63 were discharged with a less than 5% readmission rate. Improvements were noted in mobility, speech, independence, sociability, mental efficiency, and behavior. Benefits to the hospital itself from increased and outside resources are noted.—S. Knapp.

EDUCATIONAL PSYCHOLOGY

11438. Altman, K. I. & Linton, T. E. (U. Wisconsin, Milwaukee) **Operant conditioning in the classroom setting: A review of the research.** *Journal of Educational Research*, 1971(Feb), Vol. 64(6), 277-286.—Presents a review which (a) summarizes the research following an applied behavioral analysis with relevance for public school classrooms, and (b) discusses important considerations involved in an applied behavioral analysis of classroom behavior. Studies in this area are grouped into the following categories according to the nature of the reinforcement employed and assessed: teacher attention,

peer attention, token reinforcement, and vicarious reinforcement. The problems of obtaining teacher cooperation, valid and reliable measurements, and confirmation of stimulus control through design of the experiment are discussed. The implications of these studies for classroom behavior control are explored. (38 ref.)—*Journal abstract*.

11439. Cox, Brian J. (Langley School District, Murrayville, British Columbia, Canada) **Validity of a preschool colour vision test.** *Journal of School Health*, 1971(Mar), Vol. 41(3), 163-165.—A preschool color vision test utilizing finger tracing was used as a screening device to detect children with defective color vision. "The phi co-efficient of efficiency indicates that the pre-school test is somewhat better than classification of normals and defectives purely by chance. However, considerable uncertainty remains."—G. S. Spitzer.

11440. George, Rickey L. (U. Missouri, St. Louis) **Resident or commuter: A study of personality differences.** *Journal of College Student Personnel*, 1971(Mar), Vol. 12(3), 216-219.—Investigated the differences in personality structure and other variables between students choosing to attend a nearby college and commute, and those planning to live on campus at more distant institutions. The EPPS was completed by 418 high school seniors in 1969. The only significant factor turned out to be socioeconomic status. Thus, students whose fathers' occupation could be classified as professional-managerial were more likely to attend a college away from home. Compared to resident students, commuters seem to have a greater need for autonomy and dominance, while the former have a greater need for change and aggression.—R. H. Mueller.

11441. Hannah, Beth H. (Bryn Mawr Coll.) **Cooperation and competition in the classroom: Effects of the degree of similarity of the task on behavior in children's groups.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6402.

11442. Jung, Steven M. (American Inst. for Research, Palo Alto, Calif.) **Criterion measures for educational incentives.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 121-128.—Examined the advantages and disadvantages of available techniques for incentive delivery based upon measures of student performance. It is suggested that measurement procedures include standardized norm-referenced achievement tests, criterion-referenced measurements, and behavioral observations.—H. Kaczowski.

11443. Kaufman, Roger A. (United States International U., Graduate School of Human Behavior, San Diego, Calif.) **A possible integrative model for the systematic and measurable improvement of education.** *American Psychologist*, 1971(Mar), Vol. 26(3), 250-256.—Offers a possible rationale for cooperation and interdependence between professional educational practitioners who are working to improve the products and processes of education. A possible generic model for educational management is presented, identifying 6 steps for problem solving. Tools currently being used for the quantifiable improvement of education are briefly discussed and an attempt is made to relate these tools to the suggested process model of education. A possible taxonomy of educational planning is also offered. (29 ref.)—*Author abstract*.

11444. Linn, Robert L., Werts, Charles E., & Tucker, Ledyard R. (Educational Testing Service, Princeton, N.J.) **The interpretation of regression coefficients in a school effects model.** *Educational & Psychological*

Measurement, 1971(Spr), Vol. 31(1), 85-93.—Illustrates the concrete and detailed mode of thinking required in the interpretation of regression coefficients in relation to several alternative strategies for allocating school resources. A linear regression model is presented containing 3 classes of variables typically found in school effects studies. They are measures of (a) student "input," (b) student "output," and (c) the "school characteristics." The assumptions necessary for use of the model are discussed along with an illustrative example of its use.—R. W. Covert.

11445. McDaniel, Sylvia P. (U. Alabama) **The effects of selected teacher personality variables on reading readiness, self-concept, and changes in IQ in culturally deprived five-year olds.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6409.

11446. Mehrotra, C. M. (Educational Testing Service, Princeton, N.J.) **Behavioral cognition as related to interpersonal perception and some personality traits of college students.** *Educational & Psychological Measurement*, 1971(Spr), Vol. 31(1), 145-153.—A battery of tests including 4 measures of behavioral cognition measures, CPI prediction test, an adjective checklist, Behavior Postdiction Test, the Fundamental Interpersonal Relations Orientation-Behavior questionnaire, the Myer-Briggs Type Indicator, the Kuder Preference Record, and the Study of Values, was administered to 200 undergraduates. The 4 behavioral cognition measures were found to be moderately intercorrelated. Cognition of behavioral implications was found to be independent of interpersonal prediction. Multiple Rs for the 4 behavioral cognition variables ranged from .23 to .60.—N. M. Chansky.

11447. Monks, T. G. & Kawwa, T. (Devon County Education Authority, Exeter, England) **Social psychological aspects of comprehensive education.** *International Review of Education*, 1971, Vol. 17(1), 66-76.—The British school system has been selective since the beginning of the 20th century. Few changes have been effected since then. The usefulness of a comprehensive school has been strengthened by the increasing decline of intelligence testing as a selective device and the variety of research reports showing the influence of milieu on the intellectual development of the child. The report examines the inschool structure in terms of efficiency and prestige.—R. F. Wagner.

11448. Nichols, Robert C. (State U. New York, Buffalo) **Where the brains are.** *National Merit Scholarship Corporation, Research Reports*, 1969, Vol. 5(5), 17 p.—An index of the concentration of talented students in the various standard metropolitan statistical areas of the United States was developed from the 1966 administration of the National Merit Scholarship Qualifying Test. In 1966, 390,000 boys and 398,000 girls were tested. Correlations of this index with other characteristics of the metropolitan areas revealed that talented students tend to be concentrated in areas with large populations that are economically well off and have a high educational level, a high proportion of foreign born, a low proportion of nonwhites, and low fertility.—*Journal abstract*.

11449. Novick, Melvin R. (Educational Testing Service, Princeton, N.J.) **Bayesian considerations in educational information systems.** *ACT Research Report*, 1970(Nov), No. 38, 10 p.—Surveys the development during the past decade of guidance-oriented educational testing programs and the resulting need for statistical methods for educational information systems.

Bayesian methods are described as being uniquely capable of combining prior, collateral, and direct experimental information to provide probabilistic statements about parameters descriptive of students, educational programs, and their relationships. The Bayesian statistical methods needed for these applications are described. (24 ref.)—*Journal abstract*.

11450. Railo, Willi S. **Physical fitness and intellectual achievement.** *Scandinavian Journal of Educational Research*, 1969, No. 2, 103-120.—Examined (a) the interaction of physical fitness (maximal oxygen intake measured on cycle ergometer) in schoolchildren with their intelligence and school achievement, (b) interaction changes from 4th-7th grade, and (c) the correlation of parental socioeconomic status with the children's development of physical fitness. Results with 414 children indicate (a) a significant negative relationship between physical fitness and intelligence, which was significantly less pronounced in grade 7 than in grade 4; (b) no relationship between physical fitness and school achievement; and (c) a significant relationship between the socioeconomic status of the parents and the children's physical fitness. (29 ref.)—*Journal abstract*.

11451. Rogers, R. S. & Wright, E. N. (Toronto Board of Education, Ontario, Canada) **A study of children's drawings of their classrooms.** *Journal of Educational Research*, 1971(Apr), Vol. 64(8), 370-374.—Summarizes a large scale study of approximately 40,000 children's drawings of their classrooms conducted by the Toronto Board of Education. The drawings were collected under standardized conditions from junior kindergarten to 4th grade. A taxonomic approach to the drawing content through an objective coding framework is described and summaries of ad hoc examinations of the data are given along with experimentation involving the actual drawings. Findings, which were parallel to those in the literature on children's drawings, suggest that measures of skill of execution (drawing intelligence) are more stable and reliable than measures of inferred mood, attitude, or personality.—*Journal abstract*.

11452. Shotland, Robert L. (Michigan State U.) **The communication patterns and the structure of social relationships at a large university.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6883.

11453. Watley, Donivan J. (National Merit Scholarship Corp., Evanston, Ill.) **Black and nonblack youth: Does marriage hinder college attendance?** *National Merit Scholarship Corporation, Research Reports*, 1971, Vol. 7(5), 28 p.—Investigated the effect of marriage on the college attendance behavior of a total of 28,800 National Merit Scholarship Qualifying Test participants. Ss composed 72 subsamples formed on the basis of race (black or nonblack), sex, ability level, and geographical region of residence. While only 64% of nonblacks and 52% of blacks returned a 1-page questionnaire used in the study, a number of tentative conclusions were considered justified. Marriage appeared to be a more important factor in the college attendance behavior of nonblack than black males. The marital status of a woman of either race was especially significant as a determinant of college attendance: a married woman, regardless of color, was even less likely to attend than her male counterpart. Marriage also affected the type of college entered, the grades received, and whether the freshman year was completed.—*Journal abstract*.

11454. Werts, Charles E. & Linn, Robert L. (Educational Testing Service, Princeton, N.J.) **Analyzing school effects: ANCOVA with fallible covariate.**

Educational & Psychological Measurement, 1971(Spring), Vol. 31(1), 95-104.—Discusses the use of reliability estimates to correct for fallible covariates. 2 particular instances are examined: (a) where the errors of measurement in the covariate are distributed randomly with a zero mean for the total sample irrespective of group, and (b) where the errors of measurement in the covariate are distributed randomly within groups and have a zero mean within groups. The results show that in the absence of prior knowledge of the distribution of errors the more conservative approach is to assume the group means are fallible and use the reliability estimates in the appropriate formula provided.—R. W. Covert.

ATTITUDE & ADJUSTMENT

11455. Agarwal, Mahesh C. (Inst. of Social Sciences, Agra, India) **Adjustment among college students.** *Indian Psychological Review*, 1970(Jan), Vol. 6(2), 85-87.—Investigated the problem of adjustments of college students in relation to various areas and sex of Ss. An adjustment inventory (in Hindi) consisting of items relating to college adjustment, home adjustment, personal and health, and social areas was prepared and administered to 200 17-24 yr. old college students. Results using individual t tests showed that: (a) arts students were better adjusted than science students, (b) girls were better adjusted than boys, and (c) adjustment of arts boys in the college adjustment area was poorest compared to other areas. Adjustment of arts girls was best in the home adjustment area but poor in the personal and health area.—K. C. Panda.

11456. Alfert, Elizabeth & Suczek, Robert F. (Wright Inst., Berkeley, Calif.) **Personality development and cultural change.** *Journal of Higher Education*, 1971(Jan), Vol. 42(1), 21-26.—In the past decade an increasing number of studies have been concerned with personality development of students during their college years. In such studies the changes which occur can be considered as related to factors, e.g., the attitudes and personality organization already present, the atmosphere of the college community, and maturational factors. However, in the course of studies at a major university it was observed that students entering in succeeding years tend to become more sophisticated (in 1965 seniors and freshmen were very similar in attitudes). Therefore the 3 conditions of personality change during college years are not likely to be the cause of the change. The common influence could be the social revolution taking place especially in the younger generation throughout the world.—S. R. Diamond.

11457. Andes, Steven & Kulhavy, Raymond W. (U. Illinois) **Political attitude and scholastic achievement in ROTC students.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 878.—Administered a questionnaire assessing political attitudes to 372 ROTC and 29 general college students. The resulting scales were correlated with Ss' all-college GPAs. ROTC Ss showed little relationship between GPA and attitude whereas the control Ss yielded marked correlations. It is hypothesized that ROTC Ss adopt the strategy of less political commitment because of peer pressures.—Author abstract.

11458. Astin, Alexander W. (American Council on Education, Washington, D.C.) **Two approaches to measuring students' perceptions of their college environment.** *Journal of College Student Personnel*, 1971(Mar), Vol. 12(3), 169-172.—Investigated the rela-

tionship between the Inventory of College Activities (ICA) and the College and University Environment Scales (CUES), both of which are instruments that attempt to measure students' impressions of their college environment. Ss at 59 institutions were sampled and the results indicate a considerable degree of overlap between the scales of the 2 measures. It was found that more of the CUES variance could be predicted from ICA factors than vice versa. Despite the fact that each of the scales comprising the ICA were based on only 3 items, highly reliable estimates were obtained.—R. H. Mueller.

11459. Bassham, Robert A. (U. Minnesota) **The relation of test anxiety to aggression in fourth grade boys.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6275.

11460. Bonney, Merl E. (North Texas State U.) **Assessment of efforts to aid socially isolated elementary school pupils.** *Journal of Educational Research*, 1971(Apr), Vol. 64(8), 359-364.—Describes a study with approximately 300 3rd 6th graders from 3 schools, who were in the lowest 4th of social status in their classes. During 1 semester in 4 classes, the effects of 17 different kinds of socializing experiences were assessed as compared with social status scores the preceding term and similar data collected in control schools. All group differences were statistically insignificant, but a few Ss made marked gains. These largely negative findings are explained on the bases of concepts from sociometrics, social psychology, Gestalt principles, and the psychology of perception. School personnel are warned against assuming that most socially low pupils can be aided by socializing experiences. (16 ref.)—Journal abstract.

11461. Brainard, Stephen R. & Dollar, Robert J. (U. Missouri) **Personality characteristics of leaders identifying with different student subcultures.** *Journal of College Student Personnel*, 1971(Mar), Vol. 12(3), 200-203.—Examined the personality characteristics of student leaders affiliated with 3 different campus subcultures—vocational, academic, and collegiate—to determine whether all leaders have similar traits. The Stern Activities Index was completed by 85 leaders of campus organizations. Leaders in the vocational and academic subcultures had very similar profiles with the exception that the former scored higher than the latter on applied interests. Leaders in the collegiate subculture scored significantly higher than their counterparts in the vocational subculture on closeness, friendliness, and expressiveness-constraint. The academically and collegiately oriented leaders also differed on 3 factors—motivation, closeness, and friendliness. These findings indicate that student leaders apparently differ according to their campus reference groups.—R. H. Mueller.

11462. Braskamp, Larry A. & Flessner, Duane. (U. Nebraska) **The congruency between parental and entering freshman expectations.** *Journal of College Student Personnel*, 1971(Mar), Vol. 12(3), 179-185.—Investigated the relationship between student and parental expectations concerning college. The Expectation Survey was completed by 195 parents and 114 students at a midwestern state university. This instrument is comprised of 5 scales measuring purposes and goals for attending college, several items measuring educational aspirations, and a section listing 18 occupational choices. Parents and students generally did not indicate the same relative importance of goals. Biographical data including the educational level of the

parents was found to be not very useful in predicting degree objectives, expected grades, or studying time. Also, no relationship existed between the educational level of the parents and their expectations of their offspring on items measuring academic performance and degree objectives. (22 ref.)—*R. H. Mueller.*

11463. Bryant, Bunyan I. (U. Michigan) **Intergroup conflict and the instructional process in seven secondary schools.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6395.

11464. Buckley, H. Donald. (Cumberland County Coll.) **A comparison of freshman and transfer expectations.** *Journal of College Student Personnel*, 1971(Mar), Vol. 12(3), 186-188.—Investigated the expectations and perceptions of the college environment by freshmen, transfer students, and upperclassmen. 428 students completed the College Characteristics Index which attempts to measure the students' perception of the college environment. The scores of the freshmen and transfer students were typically much higher than those of the upperclassmen. Both freshmen and transfer students tended to have extraordinarily high levels of expectation for both academic and nonacademic activities. The results suggest that despite previous college experience, transfer students seem to begin with expectations that are no different from freshmen. Implications for orientation programs involving enculturation of transfer students along with freshmen are provided.—*R. H. Mueller.*

11465. Dodgens, Clarence E. (North Carolina State U., Raleigh) **A comparison of college resident and commuter students on certain psycho-sociological characteristics.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6360-6361.

11466. Frede, Martha C. (U. Houston) **Sexual attitudes and behavior of college students at a public university in the Southwest.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6898-6899.

11467. Gonnet, C. (National Center of Special Pedagogy, Beaumont-sur-Oise, France) **La prévention des inadaptations en milieu scolaire.** [Prevention of maladaptation in school.] *Bulletin de l'Institut National d'Etude du Travail et d'Orientation Professionnelle*, 1970(Nov), Vol. 26(5), 352-356.—Describes various services provided by the French government to help children at all levels of schooling in difficulties of adaptation and development.—*M. G. Strobel.*

11468. Grubb, Richard D. (Ferndale Schools, Mich.) **The relationship between reported adjustment and disparities between mental age and educational grade placement in elementary school children.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 110-114.—Studied the relationship between behavioral observations of adjustment (rated by teachers on the Peterson-Quay Behavior Problem Checklist) and disparities in children's grade placement and learning potentials in the cases of 417 urban and rural elementary schoolchildren. Correlations between the disparities and the Behavior Problem Checklist were negative suggesting that children whose grade placements were higher than their MAs were more likely to be seen as behavior problems than were those whose MAs were higher than their grade placements. Urban children's grade placements were more in harmony with their mental levels but rural children were observed to manifest fewer maladaptive behaviors.—*H. Kaczowski.*

11469. Harneson, Vernon F. (U. North Dakota) **A comparative study of social behavior of children: Kindergarten through grade three as identified by teacher rankings, the California Test of Personality and the Hewett Teacher Rating Scale.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6403.

11470. Haynes, Linda E. & Kanfer, Frederick H. (U. Cincinnati) **Academic rank, task feedback and self-reinforcement in children.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 967-974.—Explored the non-intellectual correlates of academic achievement from the perspective of research on self-regulation. The relationship of class standing and self-reinforcement patterns and the effects of positive, negative, or no feedback were studied in 150 3rd and 4th grade boys. Ss evaluated their guesses on a perceptual task as very good or bad. Boys of high class-standing were significantly more self-critical than boys of low class-standing. High Ss decreased more rapidly in self-criticism than low Ss in the feedback condition. Different feedbacks had no different effects on self-reinforcement rates, but low Ss tended to show more absolute change after feedback. (19 ref.)—*Journal abstract.*

11471. Heuser, Kenneth H. (U. Illinois) **A study of factors of satisfaction and dissatisfaction of selected high school students.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6278.

11472. Ivey, Allen E. & Wilson, Ray. (U. Massachusetts) **Perceptions of college environment: A four-year longitudinal study.** *Journal of College Student Personnel*, 1971(Mar), Vol. 12(3), 177-178.—Replicated a previous study in order to determine whether any changes in perceptions of campus environment had occurred between 1964-1968. 101 students completed the College Characteristics Index. 4 of the 11 environmental factors compared were found to be statistically significant on the basis of a series of t tests. Surprisingly, lower scores were obtained on the aspiration and self-expression factors. However, Ss also viewed the university as less concerned with social form and social skills (social form factor) as well as less vocational in terms of academic climate (vocational climate factor). The results reflect a profile of an institution in transition.—*R. H. Mueller.*

11473. Kaplan, Bert L. (Queens Coll., City U. New York) **Anxiety: A classroom close-up.** *Elementary School Journal*, 1970(Nov), Vol. 71(2), 70-77.—Asserts that anxiety is a normal and necessary emotion. But when anxiety becomes overwhelming, or when the individual is unable to respond in a constructive way, greater understanding of the nature of anxiety is necessary. How anxious a child feels depends on his ego strength, that is his flexibility in handling the stresses of life, his ability to face stress without resorting to defenses that lead to neurotic symptoms, character defects, or psychoses. Every stage of development has particular conditions for anxiety, and each stage has danger situations appropriate to it. The teacher needs to understand the type of anxiety a child is experiencing in order to be able to respond in a way that will improve his performance, and overcome his learning difficulties.—*S. R. Diamond.*

11474. Koutrelakos, James. (Hunter Coll., City U. New York) **Perceived parental attitudes and demographic variables as related to maladjustment.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 371-382.—Investigated the relative contribution of perceived

parental attitudes and of demographic variables to student maladjustment in 80 undergraduates who attended a college offering majors in the performing arts. 2 questionnaires were employed: the Inter-University Drug Survey and the College Survey, an instrument designed for this investigation. As predicted the perception of parents as encouraging independence was negatively associated with maladjustment and better predicted maladjustment in the students than did the 7 demographic variables employed. Factor analysis identified 4 parental attitudinal patterns: mother's trust in S's judgment, father's trust in S's judgment, parental encouragement of independent living, and parental encouragement of independent effort. Although the joint father and mother attitude encouraging independent living was significant, it was the father's trust in the student's judgment which was found to be most important to the student's adjustment. (20 ref.)—*Journal abstract*.

11475. Lee, Randolph M. (U. Massachusetts) **Interpersonal development during college: An assessment of its dimensions and the influence of some important intrapersonal and environmental variables.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6262.

11476. Lewis, Judith A. (U. Michigan) **A study of the characteristics of a group of high school student activists as compared with characteristics of a group of peers not associated with the activist movement.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6345.

11477. Lord, Sharon B. (Indiana U.) **Self-concepts of Appalachian children: A comparative study of economically poor and economically advantaged children using the Piers-Harris Self-Concept Inventory.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6406.

11478. Lynch, Robert C. & Sedlacek, William E. (U. Maryland) **Differences between student and student affairs staff perceptions of a university.** *Journal of College Student Personnel*, 1971(Mar), Vol. 12(3), 173-176.—The College and University Environment Scales was completed on 2 different occasions by 21 administrators and 626 freshmen. Significant differences were obtained between administrators' perceptions, administrators' ideal, freshmen expectations, and freshmen perceptions. Freshmen expectations and the administrators' ideal generally were rather similar. On only 1 scale (Propriety) was sex a significant factor among administrators' perceptions, and there was no sex difference on any of the scales for the administrators' ideal. The basic finding was that there is a large discrepancy between the ideal institution and the perceptions of both students and administrators.—R. H. Mueller.

11479. Mueller, Ronald H., Roach, Paul J., & Malone, John A. (U. New Hampshire) **College students' views of the characteristics of an "ideal" professor.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 161-167.—Administered a 25-item questionnaire (Students' Views of an Ideal Professor) to 642 undergraduates. Results are very similar to the findings of other researchers. Students tend to rank knowledge of subject, interest in subject, and flexibility as most important, and writing, participation in community, and appearance as least important.—H. Kaczkowski.

11480. Nelson, Dennis E. (Prairie View A. & M. Coll.)

The college environment: Its meaning to academically successful and unsuccessful undergraduates. *Journal of Educational Research*, 1971(Mar), Vol. 64(8), 355-358.—42 honor roll and 42 academic probation students responded to 11 concepts relevant to the university environment along 9 semantic differential scales representing 3 major dimensions of meaning (i.e., evaluative, potency, activity). The nature of any differences in ratings by these 2 groups was sought. A score for each group along each of these dimensions for each concept was derived, resulting in 33 t test comparisons. The evaluative dimension accounted for 7 of the 14 differences found to be significant at $p < .05$ or beyond. The concepts of "grades," "myself as a student," and "studying" yielded the greatest and most consistent differences. These concepts were rated as less positive, less potent, and less active by unsuccessful Ss with 1 exception: "studying" was viewed as much more active by unsuccessful than by successful Ss.—*Journal abstract*.

11481. Osborn, William P. (U. California, Berkeley) **Adjustment differences of selected foreign-born pupils.** *California Journal of Educational Research*, 1971(May), Vol. 22(3), 131-139.—By comparing the mean Bell Adjustment Inventory scores of foreign-born pupils and matched native-born pupils, it was determined that foreign-pupils do not differ greatly in adjustment from their native counterparts. However, an item analysis of the responses to the Bell scales indicated that adjustment differences unique to foreign-born pupils include self-consciousness, shyness, and fear of victimization by fate. *Journal abstract*.

11482. Patjas, Eeva. **On the anxiety associated with school attendance and the grammar school entrance examination.** *Research Bulletin, Institute of Education, U. Helsinki*, 1968(May), No. 20, 16 p.—Investigated the interdependence of anxiety and school achievement as well as associations between anxiety and pupils' social background and sex in the 4th grade. Ss were 229 4th grade pupils in an urban elementary school. Anxiety was assessed by the MA scale, and Sarason's Test Anxiety Scale for Children and General Anxiety Scale for Children. Main results are as follows: (a) in boys, the relationship between anxiety and school achievement was nonlinear; (b) in girls, the relationship was negative and linear; (c) there was no association between social background and school achievement; and (d) girls were somewhat more anxious at school than boys.—P. McMillan.

11483. Reiner, John R. & Robinson, Donald W. **Perceptions of college environment and contiguity with college environment.** *Journal of Higher Education*, 1970(Feb), Vol. 41(2), 130-139.—The College and University Environment Scales was administered to faculty, administrators, sophomores, freshmen, trustees, and 1956 and 1966 alumnae at a Midwestern 2-yr women's college. 5 chi-square analyses indicate that the 7 groups did not differ significantly ($p > .05$) on the Practicality scale, but they did differ ($p < .05$) on the Community, Awareness, Propriety, and Scholarship scales. Results suggest freshmen expectations are similar to sophomore and faculty ideals but quite different from perceptions of actual environment by faculty, sophomores, and 1966 alumnae. Perceptions of actual environment by trustees and 1956 alumnae were grouped with freshmen at the upper end of the distribution. Administration perceptions tended to be intermediate. Freshman expectations need investigation to determine

whether freshmen have faulty knowledge about their chosen college or whether such expectations are typical at all institutions.—*E. L. Tatham.*

11484. Ritt, Lawrence G. (U. Florida) **The relationships between role conflict, satisfaction and the dropout potential of college students.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6910-6911.

11485. Schermerhorn, Wanda S. (U. California, Berkeley) **The neglected child's perception of the public school experience.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6352-6353.

11486. Schmidt, Marlin R. (U. Florida) **Relationship between sorority membership and changes in selected personality variables and attitudes.** *Journal of College Student Personnel*, 1971(Mar), Vol. 12(3), 208-213.—Attempted to determine whether sororities have a differential effect in changing the attitudes and values of their members over a 4-yr college experience. 314 females completed several tests including the American College Survey, the Vocational Preference Inventory, the Interpersonal Competency Scale, the Rokeach Dogmatism Scale, and the Student Orientation Survey. These measures tap personality characteristics, educational aspirations, attitudes, and vocational preferences. Results indicate that there were few differences in attitudinal and personality changes between sorority members and independents over a 4-yr period.—*R. H. Mueller.*

11487. Schoo, Philip H. (U. Michigan) **Students' self-concept, social behavior, and attitudes toward school in middle and junior high schools.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6322.

11488. Sturtz, Sue A. (Iowa State U.) **Age differences in college student satisfaction.** *Journal of College Student Personnel*, 1971(Mar), Vol. 12(3), 220-222.—The College Student Satisfaction Questionnaire was administered to 110 adult female students and 123 college-age female students in an effort to determine whether several hypotheses concerning student satisfaction would be supported. It was found that adult women students are more satisfied with quality of education than are the younger students, and that young college students are less satisfied with policies and procedures than their older counterparts. Thus, the results suggest that older female students may be generally more satisfied with college than are younger female students.—*R. H. Mueller.*

11489. Werdelin, Ingvar. (School of Education, Malmö, Sweden) **A study of the relationship between teacher ratings, peer ratings, and self ratings of behavior in school.** *Scandinavian Journal of Educational Research*, 1969, No. 3, 147-169.—Administered a rating scale for student behavior to 16 mathematics teachers and peer and self-rating scales to their 178 male and 238 female 9th grade students. The teacher and self-rating scales were factor analyzed, separately for each sex, and all 3 scales were jointly factor analyzed. Relations with behavior and intellectual variables were found. Close connection appeared between teacher ratings (including school marks) and peer ratings, while self-ratings differed considerably from these.—*Journal abstract.*

11490. Withycombe, Jeraldine S. (U. Connecticut) **An analysis of self-concept and social status of Paiute Indian and white elementary school children in Nevada.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6420.

11491. Zirkel, Perry A. & Moses, E. Gnanaraj. (U.

Connecticut) **Self-concept and ethnic group membership among public school students.** *American Educational Research Journal*, 1971(Mar), Vol. 8(2), 253-265.—Investigated the possible relationship of self-concept with ethnic group membership and mixture in the school setting. 120 Negro, Puerto Rican, and Caucasian students were selected from the 5th and 6th grades of 3 schools, each of which had a different 1 of these ethnic groups in a majority. Results on the Coopersmith Self-Esteem Inventory indicated that the self-concept of these children was significantly affected by their ethnic group membership but not by the majority-minority mixture of groups within the schools. The significant effect was ascribed to the lower self-concept of the Puerto Rican children in the study. (3 p. ref.)—*Journal abstract.*

TESTING

11492. Armstrong, Robert J. & Mooney, Robert F. (Salem State Coll. Center for Education Research, Mass.) **The Slosson Intelligence Test: Implications for reading specialists.** *Reading Teacher*, 1971(Jan), Vol. 24(4), 336-340.—Suggests that scores obtained from the Slosson Intelligence Test administered by either a test specialist or a teacher can be used with as much confidence as scores obtained from the Stanford-Binet administered by a test specialist. The results reinforce Slosson's purposes, i.e., to develop an abbreviated test that (a) can be used as a valid screening and retesting instrument, (b) does not require specialized training to administer and score, and (c) can be administered in 1/4 of the time required by the Stanford-Binet.—*P. D. Leedy.*

11493. Berringer, Dalton E. (U. Northern Colorado, Greeley) **An examination of geometric errors in the WAIS Block Design Test and the effects upon performance as a function of spatial relations ability.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6393.

11494. Cirino-Gerena, Gabriel. (Purdue U.) **The development of a vocational interest inventory.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6313.

11495. Costello, Joan & Ali, Faizunisa. (Yale Child Study Center, New Haven, Conn.) **Reliability and validity of Peabody Picture Vocabulary Test scores of disadvantaged preschool children.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 755-760.—Administered the standard and a modified form of the Peabody Picture Vocabulary Test to 36 4-5 yr. old black preschoolers and 31 4-5 yr. old Head Start students in a partial replication of N. A. Milgram and M. N. Ozer's study (see PA, Vol. 41:13597). Test-retest correlations over a 2-wk period for the preschoolers was .77 for the standard Peabody test; values of .87 and .80 were obtained for the modified format. Quite modest validity was suggested by correlations of the standard test with 2 other psychological tests assessing intellectual behaviors and with teachers' ratings of several classroom verbal behaviors. It is concluded that, while Form A of the Peabody could be used as a 1st approximation in a continuing assessment program, scores cannot be considered alone for either intellectual or language evaluation.—*Journal abstract.*

11496. Cowen, Emory L., Dorr, Darwin A., & Orgel, Arthur R. (U. Rochester) **Interrelations among screening measures for early detection of school dysfunction.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2),

135-139.—Investigated the interrelations among the following 4 primary grade screening devices: Teachers Behavior Rating Scale, Teachers Adjective Checklist, Ottawa School Behavior Survey, and AML Behavior Rating Scale. All 90 r's were significant at $p < .01$. It is suggested that the 4 measures reflect common variables despite different content and differences in level of item specificity across scales.—H. Kaczowski.

11497. **Darlington, Richard B.** (Cornell U.) **Another look at "cultural fairness."** *Journal of Educational Measurement*, 1971(Sum), Vol. 8(2), 71-82.—4 definitions of "cultural fairness" are examined and found to be not only mutually contradictory, but all based on the false view that optimum treatment of cultural factors in test construction or test selection can be reduced to completely mechanical procedures. If a conflict arises between the 2 goals of maximizing a test's validity and minimizing the test's discrimination against certain cultural groups, then a subjective, policy-level decision must be made concerning the relative importance of the 2 goals. The terms in which this judgment should be made are described, and methods are described for entering the result of this judgment into mechanical procedures for constructing a "culturally optimum" test. Such a test will not necessarily fit any of the 4 definitions of "cultural fairness."—*Journal abstract*.

11498. **Fagin, Margaret C.** (U. Missouri, St. Louis) **Analysis of the performance of adult women in Missouri on three general examinations of the College Level Examination Program.** *Adult Education*, 1971(Spr), Vol. 21(3), 148-165.—Administered the English, Social Sciences, and Natural Sciences examinations of the College Level Examination Program to 319 25-73 yr. old females and compared their performances with those of regularly enrolled freshmen and sophomore college females. Personal data were examined to determine variables significantly related to performances. It was found that (a) CA had no effect on performance, (b) recency of formal education experience was significantly related to scores on the Natural Science examination, (c) level of formal education affected performance significantly on all 3 examinations, (d) participation in informal educational activities significantly affected performance, (e) only scores on the English examination were significantly affected by current or previous employment, and (f) the group scores most nearly approximated those for the regularly enrolled students in the social sciences. Implications for counselors of adults, college admissions officers, and employers of mature women are discussed.—*Journal abstract*.

11499. **Fleming, Elyse S. & Anttonen, Ralph G.** (Case Western Reserve U.) **Teacher expectancy or My Fair Lady.** *American Educational Research Journal*, 1971(Mar), Vol. 8(2), 241-252.—Examined the effects of teacher expectancy on changes in intelligence, controlling for differences in sex, socioeconomic status, and teacher opinion about standardized tests. 1,087 2nd graders in 39 classes representing 2 socioeconomic levels were randomly assigned to 1 of 4 treatment conditions within classrooms. The teachers completed a lengthy questionnaire about standardized tests which provided the basis for classifying high, middle, and low opinion groups. Teachers were provided with 1 of 4 kinds of test information: (a) Kuhlmann-Anderson IQ reported as tested, (b) IQs inflated by 16 points, (c) Primary Mental Abilities percentiles, and (d) intelligence test information withheld entirely. Following May retesting, teachers

were asked to assess IQ accuracy for each child. No IQ differences were observed between the treatment conditions. Significant differences were found between teacher opinion, socioeconomic status, for the interaction and between the sexes. A generalized self-fulfilling prophecy phenomenon failed to be supported.—*Journal abstract*.

11500. **Gaffney, Richard F. & Maguire, Thomas O.** (U. Alberta, Edmonton, Canada) **Use of optically scored test answer sheets with young children.** *Journal of Educational Measurement*, 1971(Sum), Vol. 8(2), 103-106.—By testing a sample of 840 schoolchildren from an urban school district, the practical limitations of the use of an optically scored answer sheet were examined. The independent variables were grade (2-9) and degree of instruction and practice (3 levels). The dependent variable was the number of easy items (embedded within a set of ordinary test items) that were correctly answered. The easy items, which were different for the various grades, were selected because other children, comparable to those used in the experiment, were able to answer them virtually without error when answering on a test booklet rather than on the answer sheet. The findings indicate that students in Grades 2 and 3, in the fall of the year, were unable to make valid responses. Students in Grades 4 and 5 seemed able to make valid responses only after receiving specific instructions and a practice session. Above Grade 5, students made valid responses regardless of the types of instructions they received.—*Journal abstract*.

11501. **Hall, Joseph C. & Chansky, Norman M.** (Cheyney State Coll.) **Relationships between selected ability and achievement tests in an economically disadvantaged Negro sample.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 741-742.—Administered the Goodenough-Harris Drawing Test, the Revised Visual Retention Test (A. L. Benton) and the Peabody Picture Vocabulary Test to 46 randomly selected disadvantaged Negro 1st graders. After 7½ mo., achievement tests were given: (a) Stanford Achievement Test, (b) Informal Reading Inventory, and (c) Daniels Word Recognition List. Correlations with achievement ranged from .05-.57. Combining Peabody with Benton scores yielded multiple Rs ranging from .55-.65, suggesting some predictive validity for this small sample.—*Journal abstract*.

11502. **Hartman, Robert K.** (U. Connecticut) **An investigation of the incremental validity of human figure drawings in the diagnosis of learning disabilities.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6403.

11503. **Irving, Doug & Henderson, Don.** (Rice U.) **On the validity of the portable Rod-and-Frame Test.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 434.—Scores of 25 male and 9 female 4th graders on portable and stationary versions of the Rod and Frame Test (RFT) correlated with $r = .83$. In an earlier study, contamination of the stationary RFT scores by a small light leak apparently reduced the portable-stationary correlation to .44. The commercially available portable RFT should be checked before use to avoid contamination by peripheral vision.—*Author abstract*.

11504. **Johnson, Eugene B.** (U. Michigan) **Pygmalion in the testing setting: Nonverbal communication as a mediator of expectancy-fulfillment.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6716.

11505. **Johnson, Marjorie S. & Kress, Roy A.** (Temple U.) **Task analysis for criterion-referenced tests.**

Reading Teacher, 1971(Jan), Vol. 24(4), 355-359.—Criterion-referenced tests can be constructed and used by individual teachers as well as by professional test makers. In either case, however, they must be relevant to the learning opportunities which have been provided for the child. When adequately constructed to reflect the actual steps of the learning process and appropriately used, criterion-referenced tests appear to offer real promise for the guidance of instruction.—P. D. Leedy.

11506. Kaiser, Henry F. & Carter, Harold D. (U. California, Berkeley) **A geometric representation of the notions of reliability, relevance, and validity.** *California Journal of Educational Research*, 1971(May), Vol. 22(3), 122-125.—The geometric representation offers a basis for some interesting discussions concerned with the improvement of tests. Further figures may be constructed, showing what happens when tests suffer from some of their allegedly common limitations. For the essay-type test, these might include not only low reliability, but low relevance and, thus, low validity due to inadequate coverage, permission of choice among questions, giving credit for knowledge not pertinent to the purpose of the examination, and other factors which may occur to the individual teacher. For the objective test, the limitations might include the use of trivial items, lack of cohesiveness among fragments, inappropriate levels of difficulty and discrimination power among items, bias due to the selection of items by the individual teacher, and other factors which, like those listed, affect not only reliability and relevance but consequently also validity.—*Journal summary.*

11507. Keeling, B. & Seddon, R. (U. Canterbury, Christchurch, New Zealand) **A test battery for Form III entrance classification.** *New Zealand Journal of Educational Studies*, 1969(May), Vol. 4(1), 57-68.—Reports some general information concerning the construction of a battery of aptitude tests designed for use in classifying secondary school entrants to Form III. Justification of the need for such a battery, a discussion of some of the theoretical and practical considerations for the battery's composition, an account of present progress and future intentions, and a discussion of some problems, especially those associated with norming and validating the battery, are presented. (18 ref.)—*Journal abstract.*

11508. Klonoff, Harry. (U. British Columbia, Vancouver, Canada) **Factor analysis of a neuropsychological battery for children aged 9 to 15.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 603-616.—Gave to 200 9-15 yr. old normal children a neuropsychological battery comprised of 29 Halstead-Reitan variables, 2 Benton variables, 1 Reitan-Klove variable, 16 Klove variables, and the 12 WISC variables. Results of a principal component factor analysis indicate that at least 19 different dimensions were being measured. The dimensions of neuropsychological functioning were: (a) directional sequencing of visual stimuli, (b) verbal fluency, (c) static motor steadiness, (d) directed motor steadiness, (e) tactile discrimination speed, (f) coordinated motor speed, (g) undirected motor speed, (h) manipulative dexterity, (i) patterned critical discrimination, (j) form reproduction accuracy, (k) cross-modality consistency, (l) set for provisional solutions, (m) cue resultant shifting of attention, (n) tactile retention, (o) alternation between conceptual realms, (p) directed motor speed, (q) analytic-synthetic visual-motor ability, (r) form reproduction speed, and (s) auditory recognition. Regression weights and composite score

formulae for estimating S's scores on these 19 dimensions are presented. Dimensions corresponded to the verbal-performance division of the WISC. 14 factors were found to be relatively independent of psychometric measures of intelligence; 3 factors were interdependent with WISC performance variables; 1 factor was interdependent with a WISC verbal variable; and 1 factor derived from WISC verbal variables. The derived factors were related to other factor analytic studies.—*Journal abstract.*

11509. Ladd, Eleanor M. (Temple U., Reading Clinic) **More than scores from tests.** *Reading Teacher*, 1971(Jan), Vol. 24(4), 305-311.—There is more information in the results of standardized tests than is ordinarily used. Among the techniques through which it is possible to gain additional information from the administration of standardized reading tests are (a) an item analysis, (b) an analysis of patterns of performance, (c) the observation of student's behavior during the taking of the test, (d) an untimed performance score, (e) the Durost reading reinforced by hearing technique, and (f) the use of a bivariate distribution chart to show the relationship between 2 scores simultaneously.—P. D. Leedy.

11510. Lambert, Philip; Hansen, Lee H., & Borgatta, Edgar F. (U. Wisconsin) **Intelligent word associations in high school students.** *Journal of Educational Research*, 1971(Feb), Vol. 64(6), 269-270.—Discusses the place of word associations in measures of verbal abilities. A study is reported involving 269 high school students selected as representative of a normal population in ability. 2 verbal abilities tests were administered at the same time: the Verbal Power Test and the Quick Word Test. A test devised of word associations was found reliable in this sample, and not only well related to measures of verbal abilities, but equal to them in ability to predict the level of English class to which the student had been assigned.—*Journal abstract.*

11511. Laslandes, Henry. **Etude sur un groupe d'élèves des classes de troisième et le passage en seconde.** [A study of a group of grade eleven students promoted to grade twelve.] *Bulletin de l'Institut National d'Etude du Travail et d'Orientation Professionnelle*, 1970(Nov), Vol. 26(5), 310-326.—Presents the results of a battery of 6 paper-and-pencil tests from over 12,000 Paris high school students who had been promoted to the final year of study. Students of both sexes in the art section had better than average results in verbal intelligence. Inversely, students in the science and technical section had better results in the nonverbal performance tests. Performance of male students in verbal as well as in nonverbal tests was superior to that of female students. The science and technical section was superior to the art section.—M. G. Strobel.

11512. Marschner, Günter. (Eschweiler Mining Works Assoc., Psychological Consultation Service, Aachen, W. Germany) **Der Revisions-Test als allgemeiner Leistungstest: Beiträge zur Standardisierung und Validierung des Revisions-Testes nach B. Stender.** [The Revisions Test as a general achievement test: Attempts at standardization and validation of the revisions test of B. Stender.] *Diagnostica*, 1971, Vol. 17(1), 14-26.—The Revisions Test consists of checking the correctness of arithmetic examples, including 34 sample exercises. The experiment was designed to test for (a) standardization and reliability, (b) empirical validity, and (c) trends and age norms. Ss were 1272 males of 5

age norms. Results verified the 3 work hypotheses, i.e., that the Revisions Test (a) showed a high correlation to other general achievement tests, (b) showed a lesser correlation to intelligence tests, and (c) satisfied the correlation between test results and subsequent job achievement. However, it is stated that further work, particularly with female Ss, is needed as well as further validity research along industrial-psychological and school-psychological lines of inquiry. It is concluded that the Revisions Test can be considered an economical, objective, general achievement test of sufficient correlation, construct, and predictability validity.—*H. Malki.*

11513. **Marsh, R. W.** (Victoria U. of Wellington, New Zealand) **Notes on sampling in the standardization of the Progressive Achievement Tests.** *New Zealand Journal of Educational Studies*, 1969(May), Vol. 4(1), 69-73.—The stimulus to develop the Progressive Achievement Tests originated in the recommendations of the Currie Commission which proposed the development of attainment tests designed with specific relevance for New Zealand needs and conditions. The purposes suggested for them were 2-fold: (a) to permit the identification of individual pupils in need of special attention as well as the direction this attention should take by indicating the pupils' specific strengths and weaknesses; and (b) to enable a survey to be made of national standards in school subjects every 5 yr., with a view to detecting any changes therein. Much discussion has followed in the intervening period, and the form and purposes given in the original suggestions have changed in some respects. Nevertheless the original view, that the tests should relate essentially to New Zealand conditions, has been followed.—*Journal abstract.*

11514. **Marx, Melvin H.** (U. Missouri) **Increased probability of error repetition as a function of number of successive prior repetitions.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 544-546.—Data collected from 37 college students on a Thorndikian multiple-choice associative learning task indicate that errors were repeated more frequently the more often they had previously occurred. Neither differential preexperimental strength nor Thorndikian spread of effect was supported as a causative factor.—*Journal abstract.*

11515. **Okhowat, Valiollah.** (U. Oklahoma) **Multiple discriminant analysis applied to American College Test scores for three groups of college majors in four Oklahoma state colleges.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6879-6880.

11516. **Rohlf, Richard J.** (Duke U., Counseling Center) **A higher-order alpha factor analysis of interest, personality, and ability variables, including an evaluation of the effect of scale interdependency.** *Educational & Psychological Measurement*, 1971(Sum), Vol. 31(2), 381-396.—Ss were 400 scholarship candidates. A 60 × 60 correlation matrix was factor analyzed using an alpha factor analysis. The resulting factor matrix was then rotated to simple structure with both orthogonal and oblique rotations. A 2nd-order factor analysis was run on the intercorrelation between factors after the oblique rotation. A similar procedure was followed on 2,500 randomly answered MMPIs and SVIBs to assess the effect of scale interdependency. The results show 10 1st-order factors accounting for 76.7% of interscale variance of the original variance. The 2nd-order analysis procedures form alpha factors including a personality factor, 2 interest factors, and a factor which has loading from both interest and personality domains.

Effects of scale interdependence are discussed.—*R. W. Covert.*

11517. **Saunders, Bruce T. & Vitro, Frank T.** (U. Maine) **Examiner expectancy and bias as a function of the referral process in cognitive assessment.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 168.

171.—Investigated the effects of bias that may be created in examiners within the public school setting as a partial function of the referral process itself. 60 2nd and 3rd graders rated as having "average mental ability" by their teachers were randomly assigned to groups labeled retarded and gifted. 6 graduate students were asked to administer a Binet to each child so that they could be referred to the appropriate special program. Results indicate that clinical cognitive assessment is not influenced by examiner bias as in experimental or nonclinical assessment.—*H. Kaczkowski.*

11518. **Siebel, Cynthia C., Faust, William L., & Faust, Margaret S.** (Pitzer Coll.) **Administration of design copying tests to large groups of children.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 355-360.—Through testing in over 250 classrooms during the past 4 yr., efficient and effective procedures have been developed for the administration of design-copying tasks to groups of 24-35 children. The procedures have been used in Grades 1-4 and adapted (additional demonstration and discussion) for groups of kindergartners. An examining team of 2-4 persons gave the instructions and supervised the test. Designs were presented on large cards in the front of the classroom and were reproduced by the Ss in 8½ × 11 in. paper booklets, using standard beginners' pencils. Model designs were not removed until all Ss indicated completion. Overall length of administration varied from 10-35 min., depending upon the particular characteristics of different classrooms, their usual work habits, and Ss' awareness of their own errors.—*Journal abstract.*

11519. **Smith, Stanley A. & Solanto, Joseph R.** (Carmel Central School District, N.Y.) **An approach to preschool evaluations.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 142-147.—Describes an evaluation process of kindergarten children that is comprised of 3 parts: (a) parent questionnaire that called for physical and health information, home-child relationships, play interests, experiences, and independence; (b) formal evaluation of vocabulary skills, numerical skills, visuo-motor skills, new learning, immediate recall ability, intelligence level, and psychosocial maturity; and (c) discussion of results and feedback to parents.—*H. Kaczkowski.*

11520. **Thorndike, Robert L.** (Teachers Coll., Columbia U.) **Concepts of culture-fairness.** *Journal of Educational Measurement*, 1971(Sum), Vol. 8(2), 63-70.—Fairness of a test relates to fair use. 1 definition of fair use states that a common qualifying score may be used with 2 groups if the regression line based on 1 group does not systematically over- or under-predict criterion performance in the other. However, it is shown that when the 2 groups differ appreciably in mean test score, the above procedure, which is "fair" to individual members of the group scoring lower on the test, is "unfair" to the lower group as a whole in the sense that the proportion qualified on the test will be smaller, relative to the higher-scoring group, than the proportion that will reach any specified level of criterion performance. An alternate definition would specify that the qualifying scores on a test should be set at levels that will

qualify applicants in the 2 groups in proportion to the fraction of the 2 groups reaching a specified level of criterion performance.—*Journal abstract.*

11521. Trider, Mary S. (ESEA State Dept. of Education, Concord, N.H.) **The right to read and standardized testing: A necessary dimension.** *Reading Teacher*, 1971(Jan), Vol. 24(4), 320-330.—The "right to read" has been established nationally as the top educational priority for the next decade. Educators are charged with finding all the alternative roads to success that exist. One can no longer admit to the naive assumption that any 1 reading series or method is adequate for all children within a class, much less a district. Accountability will be the key word. The communication gap that has existed for so long between the ideals and philosophies of the educator and the tax dollars and support of the public must be eliminated. In New Hampshire a very practical step toward the solution of the problem has been taken by implementing "a State testing program."—P. D. Leedy.

11522. Weissgerber, Joseph. (U. Louvain, Lab. of Experimental Pedagogy, Belgium) **Quelques modes d'approche du travail des écoliers: Le classement scolaire: Approche psychométrique.** [Some approaches to school work: Scholastic classification: Psychometric approach.] *Revue de Psychologie et des Sciences de l'Education*, 1971, Vol. 6(1), 13-33.—Demonstrates the lack of agreement between independent judges of the same school work. Compares, as alternatives, the jury, objective tests, and the "quantified" essay examination. 4 kinds of examinations are distinguished: narrative, mathematical, linguistic, and literary. There are also closed and open examinations, i.e., those having a limited set of tasks to be met and those calling for free and creative expression. For the closed type, the number of errors may be counted; for the open type an index of quality and quantity (N^2/n), where n is the number of errors and N is some unit of length, e.g., number of lines, may be used. When those who evaluated examinations followed a detailed procedure for noting the specific elements on which an assigned mark was based, results improved considerably. Findings from this initial study are considered sufficiently significant to merit replication and application to oral examinations. The Gaussian distribution model is rejected. (Flemish & English summaries)—S. S. Marzoff.

11523. Wells, Clinton G. (U. Northern Colorado, Greeley) **A comparative study of children grouped by three basic score patterns on the Wechsler Intelligence Scale for Children.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6444.

11524. Wijnen, W. H. **Betrekkelijkheid van de bezwaren tegen relatief meten: Naar aanleiding van Warries: Het relatief meten van leerprestaties in het onderwijs.** [The relevance of the objections against relative measurement: With reference to the consideration by Warries: The relative measurement of learning achievement in instructional processes.] *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1971(Feb), Vol. 26(2), 135-139.—E. Warries' (see PA, Vol. 45:2957) article raises a number of implications with respect to testing, the definition of the norm and the underlying philosophy of relative measurement. Particularly, the problem of relativity in measurement raises questions about the comparative validity of teacher-made tests vs. administration-made

tests, the factor of unmeasured resources of the testees, and the problem of the characteristics of efficient and desirable teachers, as reflected in pupil performance.—A. J. Ter Keurst.

SPECIAL EDUCATION

11525. Bloom, Jean L. (U. Pittsburgh, Research & Training Center in Vocational Rehabilitation) **Sex education for handicapped adolescents.** *Journal of School Health*, 1969(Jun), Vol. 39(6), 363-367.—Discusses the effects of presenting a sex education course to a group of severely physically disabled and a group of severely emotionally disturbed adolescents. A positive brief for such courses is presented.—G. S. Spitzer.

11526. Dymont, Paul G., Lattin, John E., & Hebertson, Leon M. (William Beaumont General Hosp., Pediatric Service, El Paso, Tex.) **The value of the electroencephalogram in evaluating children with minimal cerebral dysfunction.** *Journal of School Health*, 1971(Jan), Vol. 41(1), 9-11.—Questions the routine use of the EEG in evaluating children with minimal cerebral dysfunction. Some current medical opinions are reviewed on the subject. "It would appear that the EEG is not an essential part of such an evaluation, and school placement committees should be discouraged from insisting that it be obtained as a prerequisite for admission to special education classes."—G. S. Spitzer.

11527. Neifert, James T. & Gayton, William F. (Amherst H. Wilder Child Guidance Clinic, St. Paul, Minn.) **Prerequisite skills for use of a multisensory method.** *Academic Therapy*, 1971(Sum), Vol. 6(4), 381-383.—Teaching requisite sensory skills may be necessary prior to the use of multisensory approaches to learning. A learning disability and its treatment are described.—C. J. Walther.

Gifted

11528. Jacobs, Jon C. (Plymouth Community Schools, Mich.) **Effectiveness of teacher and parent identification of gifted children as a function of school level.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 140-142.—Parents and teachers of 654 kindergartners were asked to nominate those children they thought were gifted. 16 of the 26 nominated by parents were gifted. Only 2 of 44 nominated by teachers were gifted. It is concluded that parents were more conservative than teachers when naming their child as gifted and were much more accurate in their decisions.—H. Kaczkowski.

Remedial Education

11529. Wu, Julia T. (Hunter Coll., City U. New York) **A multiple group setting for ability-grouped reading.** *Academic Therapy*, 1971(Sum), Vol. 6(4), 355-358.—Presents a rationale and structure for large group ($n = 8$) instruction in a special class.—C. J. Walther.

Sensory & Physical Handicaps

11530. Baker, Georgia A. (Purdue U., Achievement Center for Children, Special Education Section) **Behavior problem or auditory interferences?** *Academic Therapy*, 1971(Sum), Vol. 6(4), 385-389.—Learning may be interfered with by difficulties in auditory perception

which may vary from day to day. Figure-ground, discrimination, memory-span, and cross-mode translation and integration are discussed as areas of auditory development subject to diagnosis and treatment.—C. J. Walther.

11531. Chambers, Jean F. (U. Arizona) **Predicting the academic achievement level of deaf students.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6396.

11532. Crawford, Frances. (Pennsylvania Dept. of Public Welfare, Bureau of the Visually & Physically Handicapped, Harrisburg) **Present-day concepts and practices of rehabilitation teaching.** *New Outlook for the Blind*, 1971(Apr), Vol. 65(4), 120-125.—Present-day concepts and practices of rehabilitation teachers stem from concepts of home teachers for the blind whose usual qualification was their own blindness. The struggle of home teachers for professional identification led to their recognition, establishing training programs, and the recent adoption of a new name as rehabilitation teacher. Rehabilitation teaching means teaching blind adults using methods different from those with children because of adults' greater heterogeneity, maturity, structuredness, and rigidity in behavior. The primary role of rehabilitation teachers consists of teaching skills for living emphasizing rehabilitation for maximum adjustment in family and community and with consideration of social and emotional problems. Focus is on individual rather than subject matter. Instruction is client-centered. Helping professions act as consultants. Principles especially appropriate for use in rehabilitation teaching are those of clients' involvement, of problem solving, and of conceptual approach.—M. J. Stanford.

11533. Hummel, Cora J. **The value of music in teaching deaf students.** *Volta Review*, 1971(Apr), Vol. 73(4), 224-228, 243-249.—A literature search in the fields of music therapy and the education of the deaf reveals a long-standing advocacy and use of music in the education of the deaf. In addition to being enjoyable and facilitating personal self-realization, music has been used to teach rhythm and other aspects of speech, to teach and test sound perception, and to encourage language development. These methods seem worthy of further investigation and employment. (4 p. ref.)—W. A. Hass.

11534. Knight, John J. **Building self-confidence in the multiply handicapped blind child.** *New Outlook for the Blind*, 1971(May), Vol. 65(5), 152-154.—Teaching a class of multiply handicapped blind children made the author aware of their lack of self-confidence, and their pervasive attitude of inadequacy and bewilderment which resulted in reluctance to cope with novel situations and quick abandonment of their efforts. This behavior had detrimental effect upon school work. To counteract this attitude new activity was found in producing an in-class radio show resembling almost "the real thing." Means used were a tape recorder, a 5-min script prepared by the teacher, and a phonograph for music. The class was seated in a semicircle and listened to the teacher's reading of the child's line and after practicing the child spoke the line into the tape recorder which was immediately shut off. The same procedure continued with other students. Sound effects were also produced by the children. They considered these shows as entertainment values and socially approved worth of their efforts. The building of self-image was helped and self-confidence was fortified. A sample script is included.—M. J. Stanford.

11535. Packard, Bruce L. (Temple U.) **Performance of blind and sighted on tactual-kinesthetic perceptual tasks.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6443.

11536. Ray, Wilbert S. & McDonald, C. Edgar. (Bethany Coll.) **The blind student and the Skinner box.** *Psychological Record*, 1971(Win), Vol. 21(1), 35-36.—Describes modifications in instructional psychology laboratory apparatus for utilization by blind students. The modification of a Skinner box is outlined. Inputs and outputs used by a blind undergraduate are noted. In addition to training the rat, the student was able to feed, water, transport, and weigh the animal.—*Journal abstract*.

Mental Retardation & Learning Disorder

11537. Ames, Louise B. (Gesell Inst. of Child Development, New Haven, Conn.) **True and pseudo slow learners.** *Slow Learning Child: The Australian Journal on the Education of Backward Children*, 1970(Jul), Vol. 17(2), 112-118.—Focuses on the important distinction between the slow learner who learns slowly because of low intelligence or because of some serious neurological or other impairment, and the one who learns slowly simply because he is too immature for the learning response required of him by the school. Also discussed is the child who is considered to be a slow learner because the school neglects to identify children who are capable of learning only at a Level I or associative level, but who are taught by the school as if capable of abstract or Level II learning.—*Journal summary*.

11538. Auxter, David. (Shippery Rock State Coll.) **Perceptual motor characteristics of preschool children with suspected learning disabilities.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 148-151.—Compared differences between normal children and children who were diagnosed as having learning disabilities on parameters of general motor development, strength, flexibility, and perceptual motor tasks that possess different loadings of perceptual content. Significant differences in favor of the normal preschool group were found on the 2-footed standing broad jump, dynamic flexibility, and ball catching. No significant differences were found on tests of strength of grip or the toe touch.—H. Kaczowski.

11539. Coppel, L. **La dyslexie et ses conséquences pour l'avenir scolaire.** [Dyslexia and its consequences for academic development.] *Bulletin de l'Institut National d'Etude du Travail et d'Orientation Professionnelle*, 1970(Nov), Vol. 26(5), 338-342.—Reports on a study of 1st grades (27 boys and 27 girls of a Paris district) using the Binet-Simon test for time-space relations, a language exam, an interview with the child, and an interview with the parents. At the end of the 1st yr. 40% were judged to be poor achievers. No correlation existed between the test at the beginning of the year and any specific difficulty, so no predictions were possible. Sociocultural environment and the attitude of the family toward school were of major importance. Personality factors of the child were fundamental (adult-child relationships, anxieties, insecurities, identification). The pedagogical method used was less influential than the personality of the teacher. Exterior factors such as absence due to illness also played a determining role. The central aspects of

reading in education and professional life and the disastrous effects of a dyslexic handicap are discussed.—M. G. Strobel.

11540. Evans, Valerie E. (U. Houston) **A typological approach to the study of individual differences in children with learning disabilities.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6927-6928.

11541. Fitzhugh, William P. (U. Miami) **A comparison of the performance of normal and retarded readers on a dichotic listening task.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6898.

11542. Ginsburg, G. P. & Hartwick, Ann. (U. Nevada) **Directional confusion as a sign of dyslexia. Perceptual & Motor Skills**, 1971(Apr), Vol. 32(2), 535-543.—In an effort to reduce the ambiguity of the concept, 429 2nd graders were tested for primary reading errors and for 2 nonreading characteristics often mentioned as signs of dyslexia. Through analyses based in large part on the logic of mixed-group validation, confusion in identification of left and right was implicated as a sign of dyslexia, and crossed hand-eye dominance was tentatively rejected. Thus, severe reading errors and directional confusion appear intertwined as components of dyslexia. Moreover, the study provided some support for the conceptual and practical potentials of the logic on which it was based. An appendix describing the tests is included.—*Journal abstract*.

11543. Heath, Earl J., Bender, Miriam L., & Early, George J. (Purdue U., Achievement Center for Children, Special Education Section) **Motor and reflex evaluations: Some new insights.** *Academic Therapy*, 1971(Sum), Vol. 6(4), 413-416.—"Teaching the child where he is" may need to be extended to the integration of the symmetric tonic neck reflex into more complex movement patterns. Residual tonic activity of the tonic neck reflex is reported in a significant number of Ss with learning disabilities. Treatment of this immature reflex is seen as contributing to the success of remediation at preacademic levels.—C. J. Walther.

11544. Hiers, Margaret H. (U. Georgia) **A comparison of the readiness test performance of a group of primary-level educable mentally retarded children instructed on visual-motor perceptual tasks and a comparable group receiving no prescribed instruction.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6440.

11545. Marchi, Jack U. (U. California, Berkeley) **Comparison of selected Piagetian tasks with the Wechsler Intelligence Scale for Children as measures of mental retardation.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6442.

11546. Miller, Wilma H. (Illinois State U.) **How can we best teach reading to slow-learning children in the primary grades?** *Slow Learning Child: The Australian Journal on the Education of Backward Children*, 1970(Jul), Vol. 17(2), 107-111.—Proposes a primary-grade reading program for slow-learning children which may best enable them to achieve up to the limits of their capability. Personal characteristics used to identify slow-learning children are reviewed. The proposed program includes reading readiness activities. The language-experience and basal reader approaches are discussed. The importance of the role of the teacher in the teaching of slow-learning children is emphasized. An extended readiness period can include the development of meaningful experiences, oral language, ability, visual

perception, and auditory discrimination. C. A. Newcomer.

11547. Notz, Irmgard. (Berlin-Zehlendorf District, School Psychological Advisory Bureau, W. Germany) **Linkshändigkeit mit LRS gekoppelt?** [Left-handedness correlated with dyslexia?] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1979(Oct), Vol. 19(7), 259-261.—In a population of about 1,000 2nd graders, 12-13% were left-handed. The populations of left-handed pupils on the 1 hand and dyslexic pupils on the other overlapped only about 1%. More than 2% of the dyslexic pupils were not left-handed, 2/3 of all the left-handed pupils were not dyslexic. Enforced change from writing with the left hand to writing with the right hand did not appear to affect orthography negatively.—H. A. Euler.

11548. Peck, Bruce B. (Bowling Green State U.) **A communication analysis of family decision making in normal and reading-problem families.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6410.

11549. Rosner, Stanley L. (Temple U., Reading Clinic) **Word games in reading diagnosis.** *Reading Teacher*, 1971(Jan), Vol. 24(4), 331-335.—Contents that in the diagnosing of reading disabilities many teachers use terms loosely and inaccurately. Because of this inexact use of terms much of the jargon of the profession has tended to slide toward meaninglessness in communication. Labels are assigned to reading disability according to socioeconomic status rather than because of a specific etiology. Dyslexia, minimal brain damage, and specific learning disability occur with striking frequency among the affluent. It is suggested that a conference be organized to arrive at some standard terminology in reading.—P. D. Leedy.

11550. Smith, Maxine M. (Claremont Graduate School & University Center) **Patterns of intellectual abilities in educationally handicapped children.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6415.

11551. Smith, William. (1890 Beacon St., Brookline, Mass.) **The visual system in reading and learning disabilities.** *Journal of School Health*, 1969(Feb), Vol. 39(2), 144-150.—Studied the problem of dyslexia (reading disability) as an optometrist concerned with the function of the visuo-motor-sensory-spatial-perceptual performances, their role in reading and learning, and the correction of their defects. In June 1967, 36 children with reading and learning disabilities and who had been tested by sundry specialists were treated following performance tests of functions involved in visual perception. In all Ss, unsuspected and obscure deficiencies were uncovered, although the visual system as a factor in the child's learning disability had been discounted. 2 mo. of orthoptic treatment resulted in reading improvement. It is concluded that not all reading and learning disabilities can be blamed on the visual system. However, it is the 1st to become involved in reading, and even in the presence of neurologic and other factors, the visual system may be indirectly involved.

11552. Thompson, Lloyd J. (U. North Carolina, Chapel Hill) **Mental retardation and dyslexia.** *Academic Therapy*, 1971(Sum), Vol. 6(4), 405-406.—Exceptional children may not be immune to dyslexia. Dyslexia may be an important factor in any grouping of exceptionality.—C. J. Walther.

11553. Wadsworth, H. G. & Wadsworth, Joanna B. (Community Consolidated School District 59, Ridge

School, Elk Grove Village, Ill.) **A problem of involvement with parents of mildly retarded children.** *Family Coordinator*, 1971(Apr), Vol. 20(2), 141-147.—About 94% of the 6,000,000 retarded individuals in this country are a little-studied group that is offered negligible service on special education programs of the schools. The parents of these mildly or borderline retarded children have not organized in an effort to receive better services. Several reasons are suggested for this lack of involvement by the parents: (a) unwillingness to admit to a significant intellectual problem with their child, (b) indifference, and (c) dependence on special education programs of the school. Questionnaires were sent to parents of mildly retarded children in special education classes to try to involve these parents in their child's education. 2 conclusions are discussed: (a) Significant differences were found between respondents and non-respondents on socioeconomic status and children's IQ level. The possible reasons for this are discussed and some selected questions are presented and response examples given. (b) Those who did respond evidenced intense feelings toward the problem—the classificatory labeling of the children. Parental responses reinforced changes planned by the school and showed a need for parent education programs to provide an opportunity for increased involvement and to strike at many misconceptions of retardation.—*M. W. Linn.*

Emotional Disorder

11554. Coleman, Richard. (Weston Public Schools, Mass.) **An economical model of the engineered classroom.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 963-966.—Developed a behavior modification model for a special class of 5 disturbed male children following the collapse of a previous program. Specific appropriate classroom behaviors were identified for each child. The goal of the program was to increase the frequency of these appropriate behaviors to the extent that the child could function full-time in a regular class. The organization of the class and behavior modification procedures are described.—*Journal abstract.*

11555. Lewis, Clayton D. (U. Michigan) **An assessment of the later adjustment of some emotionally disturbed children after termination on in-patient psychiatric treatment.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6440-6441.

11556. Pedrini, Bonnie C. & Pedrini, D. T. (U. Nebraska, Omaha) **Reinforcement procedures in the control of encopresis: A case study.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 937-938.—Describes the treatment of an 11-yr-old boy with encopresis. The 1st 3 wk. were used to establish a base rate. S defecated in class, once every few days. After S was programmed with reinforcers (charting and coupons toward book purchases), he had only 1 accident for the remainder of the school year (8 wk.). Follow-up through the 7th month of the next school year indicated 1 accident. During this 7-mo period, S was not programmed with book coupons or any other specific reinforcer. S had internalized a previous external model of control.—*Journal abstract.*

11557. Sewell, Sandra. (Autistic Children's Assn., Queensland, Brisbane, Australia) **The teacher's contribution to the treatment of infantile autism.** *Slow Learning Child: The Australian Journal on the Education of Backward Children*, 1970(Jul), Vol. 17(2), 89-96.—Proposes 4 major areas into which the education of

autistic children can be divided: (a) training of perceptual discrimination skills, (b) training of sensory and motor skills, (c) training in social behavior, and (d) preparation for normal school education and for normal peer and family activities. The author's 5-yr association with autistic children forms the basis for the viewpoint presented. It is noted that there is a need for more teachers trained in special education and for greater recognition of the educational needs of the atypical child.—*C. A. Newcomer.*

COUNSELING & GUIDANCE

11559. Amos, Jimmy R. (West Virginia U.) **Similarity, interpersonal attraction and uniformity in sensitivity training groups.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6336.

11560. Barbee, Ruth E. (U. North Dakota) **Personality variables related to the use of interaction analysis in a counseling practicum experience.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6336.

11561. Blackburn, Laura F. (U. Missouri, Kansas City) **Intern counseling competence as a function of supervisor and intern personality characteristics.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6338.

11562. Burrell, Leon & Rayder, Nicholas F. (Michigan State U.) **Black and white students' attitudes toward white counselors.** *Journal of Negro Education*, 1971(Win), Vol. 40(1), 48-52.—To examine the nature of black and white student attitudes toward white counselors at a large inner city high school, a small sample of students, proportional to the population in terms of race, and 1/2 male and 1/2 female, was asked to respond to a short 12-item attitude scale. Results were summarized and chi-square analyses were applied to see if there was a difference in the way black and white, females and males responded. Student responses did not reflect an overwhelmingly favorable attitude toward the counseling situation. When analyzed by race, the results did indicate that black student responses to attitudinal statements directed toward the counseling situation were significantly lower than white responses to that same counseling situation. Black females reflected a slightly lower attitude than the black males. Methodological limitations and interpretations of results are given.—*W. E. Sedlacek.*

11563. Conklin, B. C., Altmann, H. A., & Hengel, Helen. (U. Calgary, Alberta, Canada) **Appropriateness of problems for discussion with counsellors.** *Alberta Journal of Educational Research*, 1971(Mar), Vol. 17(1), 43-48.—The Warman Counselling Appropriateness Checklist (WCAC) was administered to counselors, principals, and counselor educators. WCAC requires respondents to indicate on a 5-point scale the extent to which they considered 66 items appropriate to discuss with counselors. Groups differed with regard to appropriateness of discussing adjustment and love, religion, and morality with counselors. They did not differ in their views toward discussing educational and vocational problems with the counselor.—*N. M. Chansky.*

11564. Cosby, Arthur. (Louisiana State U.) **Black-**

white differences in aspirations among Deep South high school students. *Journal of Negro Education*, 1971(Win), Vol. 40(1), 17-21. —Attempted to test the hypothesis that black youth have lower levels of hypothetical aspirations than white youth. 5,992 10th graders in the Deep South were interviewed using a standard schedule. Results indicate that 66% of the white students had high level occupational aspirations vs. 60% for blacks. When socioeconomic variables were controlled there was a failure "to find a consistent tendency for whites to express higher aspirations . . . the black students had higher level aspirations in the majority of comparisons . . ." No statistical significance tests are reported. Differences between this study and others on the topic are explained as due to controls applied in this study and increased aspirations of Southern blacks.—W. E. Sedlacek.

11565. Cottingham, Harold. (Florida State U.) **Group process in counselor education: Some issues and concerns.** *National Catholic Guidance Conference Journal*, 1971(Spring), Vol. 15(3), 167-171.—Discusses 3 areas of issues (philosophical, administrative, curricular) and 4 problem areas (faculty involvement, student-faculty relationships, administrative and curricular difficulties, and relationships with the academic community). (21 ref.)—A. M. Cawley.

11566. Dann, Joyce E. & Abrahams, Norman M. **Use of biographical and interview information in predicting Naval Academy disenrollment.** *U.S. Naval Personnel & Training Research Laboratory Research Report*, 1970(Sep), No. SRR 71-7, 15 p.—In previous research, the Naval Academy Personal History Booklet (PHB) has shown some validity as a predictor of Academy disenrollment. The present research evaluated a new method of coding and scoring the PHB and compared its validity with that of the psychiatric screening interview and the SVIB. PHBs administered in 1961-1963 as part of Academy application were obtained for 256 men who later disenrolled from the Academy and for 245 men who graduated with their classes. 8 attrition prediction scales were constructed and employed in a double cross-validation design. $\frac{1}{2}$ of the scales used only items of the PHB, while $\frac{1}{2}$ included items based on the screening interview. A single rating based on the interview was also evaluated. The 8 experimental scales showed key-development validities of .59-.61 and cross validities of .11-.22. Screening interview items contributed only .01 to validity of the best scales, while the single interview rating showed validities of only .11 and .07. By contrast, cross validities of SVIB disenrollment keys have ranged from .34-.43. It is concluded that the PHB scales are not recommended for operational use in predicting Academy disenrollment, as they have already been surpassed in predictive efficiency by the SVIB.—*Journal abstract.*

11567. Dawson, Lorene. (U. Missouri, Kansas City) **Occupational development as an expression of personality: Implications for counselor education.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6341.

11568. Dinkmeyer, Don. (DePaul U.) **Group approaches to understanding and changing behavior.** *National Catholic Guidance Conference Journal*, 1971(Spring), Vol. 15(3), 163-166.—Group processes with teacher and parent groups are organized around such factors as collaborating, consulting, clarifying, confronting, caring, being concerned, confidential, and

committed—the "C" group concept. The teacher is concerned with these in relation to instructional aspects of guidance and is challenged to competency in 1 or more of the 8 areas of group counseling.—A. M. Cawley.

11569. Dizenhuf, Israel M., et al. (Central Psychiatric Clinic, Cincinnati, O.) **School mental health.** *American Journal of Orthopsychiatry*, 1971(Mar), Vol. 41(2), 307-314.—Presents digests of 6 of the papers presented at the 48th annual meeting of the American Orthopsychiatric Association in 1971. Topics covered include the liaison educator, in-service mental health training for teachers, group methods for modifying aggressive behavior in elementary schools, and school-based and community-based mental health consultation.

11570. Doverspike, James E., Weis, David M., & Wangerin, Mary B. (U. Akron) **Themes of individual and group counseling sessions.** *National Catholic Guidance Conference Journal*, 1971(Spring), Vol. 15(3), 180-182.—Data for 341 elementary through senior high school counselees were derived from case studies of 72 practicum counselors. General topic areas were stated as: (a) self topics; (b) significant others, i.e., authority figures; (c) significant others, i.e., peers; and (d) ideas, places, things, and time topics. Significant differences were discovered between individual and group sessions at all levels on all themes except self topics.—A. M. Cawley.

11571. English, Richard A. (U. Michigan) **The educational aspirations of black and white youth.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6730.

11572. Frank, Austin C. (U. California, Berkeley) **Men's Strong Vocational Interest Blank Academic Achievement scale: An attempted validation.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 324-331.—The Academic Achievement scale (AACH) introduced in the SVIB was said in the 1969 Manual Supplement to be more related to persistence in school than to level of performance. This proposition, the scale's predictive validities for 1-, 3-, and 4-yr GPAs, and its effectiveness with potential counseling subgroups were examined with the SVIB, the School and College Ability Test, and follow-up questionnaire data on a representative sample of 200 university men. No relationship was found to persistence or between entering 1st-yr AACH scores and 4-yr GPA ($r = .13$). Comparisons with a scholastic ability test were unfavorable, other results ambiguous, and caution seems indicated in using the scale.—*Journal abstract.*

11586. O'Reilly, Robert P. & Wightman, Lawrence E. (New York State Education Dept., Albany, N.Y.) **Improving the identification of anxious elementary school children through the use of an adjusted**

anxiety scale. *Journal of Educational Measurement*, 1971(Sum), Vol. 8(2), 107-112.—Investigated interrelationships among anxiety (defensiveness), intelligence, and achievement. Ss were 165 6th graders who participated in a separate study involving programmed learning. Error scores from responses to the program and a criterion achievement test scores provided the necessary data. Other data used were obtained from the preinstruction administrations of the Test Anxiety Scale for Children (TASC), the Lie Scale for Children (LSC), and the Lorge-Thorndike Intelligence Test. Anxiety scores (TASC) were adjusted for defensiveness (LSC) by an equally weighted summation of the 2 scores. Examination of the correlations of TASC and TASC (adjusted) scores with achievement and IQ scores showed that the adjusted anxiety scores were markedly superior in validity to that of the uncorrected scores.—S. B. Mitra.

11587. Pellegrine, Robert J. (U. Rochester, River Campus Coll.) **Repression-sensitization and perceived severity of presenting problem of four hundred and forty-four counseling center clients.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 332-336.—Administered the Repression-Sensitization (R-S) scale to 444 university counseling center applicants. Normative data indicated that counseling centers may draw from the body of data generated by research with the instrument. The bulk of the client load was composed of sensitizers and a smaller proportion of repressors who were seeking assistance with personal-social problems. 3 levels of severity of client presenting problem were defined. A discriminant function analysis was 77+ % successful in identification of severity groups. It is concluded that the most potent discriminator is the R-S scale score, and the instruments may be employed in place of intake interviews during times of increased client demand, thus freeing counselor time.—*Journal abstract*.

11588. Prediger, Dale J. (American Coll. Testing Program, Iowa City, Ia.) **Data-information conversion in test interpretation.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 306-313.—Test results, when viewed in the context of decision theory, can play an important role in vocational development. Objective procedures for converting test data into counseling information are discussed and illustrated, emphasizing similarity scores and similarity score profiles. The profiles, when used in conjunction with success estimates, avoid many of the pitfalls inherent in Parsonian approaches to test interpretation. Local validity studies are needed to support data-information conversion procedures. Computer-based test interpretation systems designed to serve the practitioner are predicted. (24 ref.)—*Journal abstract*.

11589. Rankin, Richard C. (Arizona State U.) **Attitudinal perceptions of black students and white students as influenced by an instrumented laboratory experience.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6351.

11590. Reinhardt, Rose L. (Advisory Bureau for the Elderly, Adolescents & Children of the Rural Districts of Herford, W. Germany) **Zehn Jahre Erziehungsberatung in einem Landkreis.** [Ten years of educational counseling in a rural county.] *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1970(Oct), Vol. 19(7), 265-268.—In a large rural county the applications of an educational counseling clinic are necessarily different from those in a

city. In the former the tasks and possibilities are primarily of a diagnostic and counseling nature. For 4225 referred and tested children and adolescents the statistics were compared over a 10-yr period. Over this time the 6-14 yr. olds made up a constant 75%. Family and living situations had normalized increasingly. Symptom clusters as well as single symptoms within these clusters maintained their frequencies of appearance.—H. A. Euler.

11591. Scales, William R. (Indiana U.) **A study of the effects of the distribution of time spent in group interaction on specified group outcomes.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6352.

11592. Schmidt, Lyle D. & Strong, Stanley R. (Ohio State U.) **Attractiveness and influence in counseling.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 348-351.—Studied the effects of counselor "attractiveness" on counselor influence in counseling. 41 experimental and 13 control college males rated their need for achievement before, following, and 1 wk. after a short interview exploring their need for achievement. In experimental but not control conditions the interview ended with an interviewer attempt to influence the Ss' need for achievement ratings. 2 interviewers and attractive or unattractive roles determined 4 conditions. Experimentals changed their ratings more than controls. While Ss perceived interviewers as intended, the roles were not differentially effective. However, attractive role Ss were less aware of the attempt to influence than were unattractive role Ss. Different long- and short-term effects of attractiveness are suggested.—*Journal abstract*.

11593. Schoon, Craig G. & Stahmann, Robert F. (U. Iowa) **Use of the Psychological Screening Inventory in a university counseling service.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 367-368.—Evaluated the effectiveness of the Psychological Screening Inventory (PSI) in meeting the diagnostic needs of a university counseling service. PSI scales include Alienation, Social Nonconformity, Discomfort, Expression, and Defensiveness. The instrument yielded highly significant discriminations between clients with personal adjustment and vocational-educational problems. 379 male and female clients served as Ss. It is concluded that the PSI could give useful diagnostic information to counselors.—*Journal abstract*.

11594. Singh, R. P. (Bureau of Psychology, Allahabad, India) **Stability of interest patterns.** *Indian Psychological Review*, 1969(Jul), Vol. 6(1), 14-15.—Reports on the stability of interest patterns of high school students over a 2-yr period using a cross-sectional approach. The Allahabad Psychological Bureau Interest Inventory (in Hindi) designed after the Kuder Preference Record was administered to 222 and 336 students of Grades XII and X, respectively. Results indicate a significant decrease in mean interest scores as a function of increase in educational level in 6 different areas: outdoor, mechanical, scientific, artistic, musical, and social service. Interest patterns in the areas of computational, persuasive, literary, and clerical activities were stable over 2 yr.—K. C. Panda.

11595. Smith, Ada M. (U. Texas) **The relationship of ninth and twelfth grade rural high school students' perceived parent-child attitudes and their vocational preferences.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6414-6415.

11596. Spivack, James D. (Michigan State U.) **The use of developmental tasks for training counselors**

using Interpersonal process recall. *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6883-6884.

11597. Thomas, Arthur H. & Stewart, Norman R. (U. Kansas) **Counselor response to female clients with deviate and conforming career goals.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 352-357.—Attempted to determine whether secondary school counselors respond more positively to female clients with traditionally feminine (conforming) goals than those with traditionally masculine (deviate) goals. 18 female and 44 male practicing counselors served as Ss. 5 stimulus interviews with high school girls elicited information concerning their home, school, self-description, and personal values. These were presented on audiotape to Ss and their responses were analyzed by sex and experience. Instruments developed and used include an adaptation of the Gough Adjective Check List, an Appropriateness of Career Choice Scale, and a Need for Further Counseling Scale. Results were as follows: (a) female counselor gave higher Acceptance scores to both deviate and conforming clients than did male Ss; (b) Ss, regardless of sex, rated conforming goals as more appropriate than deviate; and (c) Ss, regardless of sex, rated female clients with deviate career goals to be more in need of counseling than those with conforming goals.—*Journal abstract*.

11598. Wachowiak, Dale G. (Southern Illinois U.) **Model-reinforcement counseling with internally and externally controlled college males.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6248.

11599. Wagman, Morton. (U. Illinois) **Clinical and research use of the Strong Vocational Interest Blank Academic Achievement scale.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 337-340.—Studied the clinical and statistical uses of the Academic Achievement scale (AACH) of the SVIB by comparing measures of GPA, scholastic aptitude, and counseling progress of 193 undergraduate and graduate counseling clients. Statistical findings include a correlation coefficient of .35 between AACH and GPA; .39 between AACH and School and College Ability Test (SCAT) total; and .39 between GPA and SCAT total. Clinical findings indicate that relatively low AACH scores generally predict changes of occupational planning toward business and other applied directions, whereas higher AACH scores are associated with changes toward more academic and scientific orientations. These regularities were modified for clients with moderate to severe personal problems.—*Journal abstract*.

11600. Wechsler, Jill D. (Human-Dynamics Workshop, Boulder Creek, Calif.) **Improving the self-concepts of academic underachievers through maternal group counseling.** *California Journal of Educational Research*, 1971(May), Vol. 22(3), 96-103.—Investigated small group encounter-type counseling designed to improve the attitudes of mothers toward their academically underachieving sons, and of the subsequent effects on the boys' self-acceptance and perceived maternal-acceptance. Differences between Q-sort derived measures of Self-Acceptance and Perceived Maternal-Acceptance were compared for 20 boys whose mothers participated in counseling sessions, and 20 boys whose mothers did not participate. The matched groups of school-identified underachieving boys were in the 4th and 5th grades, and of average intelligence. Follow-up measures of differences between the groups 3 wk. and 6

mo. following termination of counseling indicated a sustained improvement in the Self-Acceptance ($p < .01$) and Perceived Maternal-Acceptance ($p < .05$) of the 20 boys whose mothers had received counseling. Maternal encounter-type group counseling may provide a method of improving the characteristically inadequate self-concepts of academic underachievers without individual counseling information.—*Journal abstract*.

11601. Werry, John S. & Quay, Herbert C. (Auckland U., Medical School, New Zealand) **The prevalence of behavior symptoms in younger elementary school children.** *American Journal of Orthopsychiatry*, 1971(Jan), Vol. 4(1), 136-143.—Studied the frequency of 55 behavior symptoms in the entire kindergarten through the 2nd grade population (926 boys and 827 girls) of a Midwestern university town. Many symptoms proved to be of high frequency; boys had a greater number of symptoms with a marked excess of acting out than did girls. Generally speaking, the mean number of symptoms/child decreased with age in both sexes.—*Journal abstract*.

11602. Williams, Constance M. (U. North Dakota) **Personality factors, value patterns, and occupational choices of male graduate students.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6357.

11603. Witters, L. A. & Miller, H. G. **College advising: Analysis of advisor-advisee roles.** *Journal of the Student Personnel Association for Teacher Education*, 1970, Vol. 9(2), 36-40.—A questionnaire was constructed from data received from a pilot study of student comment. Using this instrument, 300 students and 14 staff members revealed data about advisor-advisee relationships. 4 areas were investigated: (a) student expectations of college advisers, (b) characteristics of good advisers, (c) student roles in the advising process, and (d) faculty relationships. Recommendations included an approach to make advising become an integral part of the total learning experiences of the student. This advising-supervising-instructing relationship must be based upon experience-oriented programs and definite performance criteria.—*S. M. Amatora*.

PERSONNEL

11604. Barclay, James R. (U. Kentucky) **Descriptive, theoretical, and behavioral characteristics of sub-doctoral school psychologists.** *American Psychologist*, 1971(Mar), Vol. 26(3), 257-280.—Reports an analysis of theoretical and behavioral characteristics of a group of applicants and enrollees to an advanced National Defense Education Act Institute held for school psychologists in 1967. Data collected are discussed in relationship to the training, background, theoretical orientation preferences, work load and time allocation to alternate school psychology activities, and behavioral characteristics of applicants and enrollees. Findings suggest that theoretical orientation does appear to effect dimensions of school psychology practice. Factor analyses and step-wise regressions were completed on both paper-pencil measures and observational data obtained from video tape analysis. Results suggest that school psychologists have been recruited for the most part from the ranks of teachers and counselors within the public school setting. Traditional and novel predictors and multiple criteria are discussed in relationship to the emergence of a task-oriented social-learning model for

school psychology training and practice.—*Author abstract*.

11605. Brickman, Robert L. (Claremont Graduate School & University Center) **School climate: A reflection of the principal's personality.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6293-6294.

11606. Brown, Frank. (U. California, Berkeley) **Need satisfaction of educational administrators.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6295.

11607. Moses, H. & Delaney, D. J. (U. Illinois) **Status of school personnel.** *Journal of the Student Personnel Association for Teacher Education*, 1970, Vol. 9(2), 41-46.—163 men and 145 women graduate students in education in 14 different classes responded to a questionnaire that listed in random order the 18 most common positions in the public school. Data were analyzed according to age, sex, teaching experience, type of degree held, and current position. Results indicate that these variables had very little influence on how the counselor position was perceived. On the total scores for the rank-order scales, the counselor ranked 6th. This was below administrators and teachers but above other "special" personnel. It is concluded that the school counselor position has relatively high prestige among school personnel.—*S. M. Amatora*.

Teachers & Teacher Training

11611. Auger, Terrance J. (U. Illinois) **Some effects of peer evaluation on the performance of elementary education students.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6392.

11612. Bonnin, Robert M. (U. California, Berkeley) **An assessment of relationships between certain personality variables and teacher performance in teaching assignments of higher and lower difficulty.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6446.

11613. Bromberek, Benon. **Nauczyciel w rolach społecznych.** [Social duties of a teacher.] *Prace Wydziału Filozoficzno-Historycznego: Seria Psychologia-Pedagogika*, 1970, No. 17, 175-231.—The importance of teachers in industrialized societies is on the increase. In consideration of this fact, a teacher's social duties are discussed, which involve his relations to his students, to the school principal, to the school, to youth organization, and to the parents. These duties include the guidance of the extracurricular activities of the students, special

programs, his presence at meetings of students with representatives of the industry, and consultations with parents about the abilities and aspirations of their children. Further duties of a teacher result from his position in the nonprofessional social structures—the family, social and political organizations, clubs, unions, etc. The conflicts arising from the various duties of a teacher are discussed. Special attention is paid to the feminization of the teaching profession and its social effects. It is believed that teachers should be freed, as far as possible, from their extracurricular duties. A teacher's activities should be concentrated on the organization and further development of educational centers. (78 ref.)—*P. von Toot.*

11614. Brooks, Fred O. (U. North Dakota) **Effect of personal values and open-closed mindedness on student teacher anxiety.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6447.

11615. DeBlassie, Richard R. (New Mexico State U.) **A comparative study of the personality structures of persistent and prospective teachers.** *Journal of Educational Research*, 1971(Mar), Vol. 64(7), 331-333.—Administered the 16 PF to 16 male and 16 female teachers and 16 male and 16 female teachers-in-training. An analysis of variance indicates that the 4 subgroups were significantly different on only 4 of the 16 personality factors. Results suggest that only slight personality differences exist between teachers with an undergraduate teacher training background and prospective teachers with an undergraduate liberal arts background.—*Journal abstract.*

11616. Delaney, Edmund T. (U. Illinois) **The effects of a group experience on the self-awareness of supervisor trainees and teacher trainees in supervision.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6397.

11617. DeVries, David L. (Johns Hopkins U., Center for Social Organization of Schools) **Sources of influence on faculty behavior.** *Center for Social Organization of Schools Report, Johns Hopkins U.*, 1971(Jun), No. 106, 26 p.—Investigated the effects of shared values and expectations on the behavior of 290 faculty members of a large public university. The expectations the faculty member had for himself, those his colleagues had for themselves, and those of his employing organization predicted positively and significantly the behaviors of the respondents. The self-expectations of the departmental executive officer did not relate significantly to faculty behavior. Behavioral conformity with collegial self-expectations was significantly related to degree of alienation, to the cosmopolitan-local dimension, and to departmental size. Implications of the results are examined for the role theory of D. Katz and R. Kahn and for the understanding of faculty member behavior. (22 ref.)—*Journal abstract.*

11618. DeVries, David L. (U. Illinois) **The relationship of departmental and personal role expectations to the role behaviors of university faculty members.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6713.

11619. Frankel, Alan. (U. Portland) **Uses and abuses of status in teacher-student relationships.** *Rehabilitation Counseling Bulletin*, 1970(Dec), Vol. 14(2), 95-101.—Discusses the social psychology of the differential roles of a teacher and student in a class. Mention is made of the various motivations of the teacher as well as of each of the students. It is suggested that there is a

parallel relationship between the doctor-patient situation and that of a teacher-student. It is proposed that both teachers and students formulate their respective goals, both cognitive and affective. The teachers should announce such goals and the students should articulate them.—*A. J. Ter Keurst.*

11620. Hanks, J. E., Houston, S. R., & Usher, R. (Eastern Washington State Coll.) **Researching the effective college teacher: A perceptual approach.** *Journal of the Student Personnel Association for Teacher Education*, 1970, Vol. 9(2), 51-56.—Using 4 instruments—perception of teacher conceptual systems, perception of level of learning, classroom teaching, and overall rating scale—2,114 college students rated their 74 teachers. The teachers rated themselves on the This I Believe test and on levels of learning. The 20 predictor variables provided moderately efficient prediction of college teacher effectiveness for all 13 criteria. Teachers in the research and statistics, education, and psychology areas were generally rated higher on all 13 criteria than were teachers in the administration and business areas.—*S. M. Amatora.*

11621. Innis, Mary N. (U. Houston) **An analysis of sensitivity training and laboratory method in effecting changes in attitudes and concepts.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6404.

11623. Johnson, Helen H. (McMichael Junior High School, Detroit, Mich.) **Teacher attitude and ghetto language.** *Viewpoints*, 1971(Mar), Vol. 47(2), 73-81.—Discusses some of the harmful teacher attitudes and lists important considerations for the ghetto teacher who expects to have any influence on the child's language development.—*G. Lowe.*

11624. Kakkar, S. B. (State Coll. of Education, Patiala, India) **Influence of teacher training on student's values.** *Psychologia: An International Journal of Psychology in the Orient*, 1970(Dec), Vol. 13(4), 192-202.—The influence of teacher training was estimated through the use of the Allport-Vernon-Lindzey Study of Values. Ss were 100 male and 50 female graduate teacher trainees. The test was administered at commencement and again at the end of the teacher training course. Significant sex differences were revealed on all 6 values on both occasions. Except in social and economic values, minimal changes occurred. Differences between Indian and British students may be attributable to cultural differences.—*R. D. Nance.*

11625. MacLeod, Robert B. (Cornell U.) **The teaching of psychology.** *American Psychologist*, 1971(Mar), Vol. 26(3), 245-249.—Concerns the beginning teacher of psychology, educational objectives, selection of subject matter, teaching methods, student interests, and the teacher's own preparation for teaching. It is suggested that a beginner will be on the way to becoming a good teacher if he (a) has enthusiasm for his subject; (b) has respect for his students; (c) is open-minded about method, willing to challenge tradition and experiment with new procedures; and (d) regards his subject as a meaningful part of a larger educational enterprise.—*Author abstract.*

11626. Mizell, Al P. (Indiana U.) **Aptitude treatment interactions: A search for personality factors which**

interact differentially with structured and unstructured teaching strategies. *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6474-6475.

11627. Null, Eldon J. (Purdue U.) **Relationships between personal variables of teachers and their perception of the behavior of school personnel.** *Journal of Educational Research*, 1971(Apr), Vol. 64(8), 351-354.—Attempted to determine whether relationships exist between personal variables of teachers, as measured by the Minnesota Teacher Attitude Inventory and the 16 PF, and their evaluation of the behavior of their principal and fellow teachers in responses to items of the Organizational Climate Description Questionnaire (OCDQ). The sample consisted of 1,691 teachers in 81 elementary schools. Data were analyzed through the use of coefficients of correlation and multiple regression equations. The examination of 138 null hypotheses indicate that certain personality factors of teachers, along with their attitudes toward children, are related to the evaluation of certain dimensions of behavior as indicated by scores on the 8 subtests of the OCDQ. —*Journal summary.*

11628. Passalacqua, Benedict J. (U. Michigan) **Teacher job satisfaction based on the Herzberg theory.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6315.

11629. Pestonjee, D. M. & Akhtar, S. Sultan. (Banaras Hindu U., Varanasi, India) **Occupational values of university teachers.** *Indian Psychological Review*, 1969(Jul), Vol. 6(1), 22-25.—Compared the occupational values of university teachers belonging to the faculties of science (N = 106) and engineering (N = 87). The samples were drawn randomly. The Job Value Cards developed by Centers were individually administered to the Ss. Each S was asked to rank the 10 occupational values in order of preference. Differences in median values using the Kolmogorov-Smirnov test showed only 1 of the 10 values, i.e., independence, to be significant. Science teachers preferred independence more than engineering teachers.—K. C. Panda.

11630. Racz, Leslie L. (State U. New York, Buffalo) **A study of teacher alienation and its relationship to individual needs and leadership behavior.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6319.

11631. Raina, T. N. (Regional Coll. of Education, Ajmer, India) **An application of the F-Scale to Indian student-teachers.** *Indian Psychological Review*, 1969(Jul), Vol. 6(1), 4-7.—Analyzed the personality characteristics of a group of student teachers. The California F Scale (Forms 45 and 40) was administered to 145 20-45 yr. old student teachers, 136 male and 9 female. Results showed that student teachers were more authoritarian than other samples. Arts students showed more authoritarianism than science students. Ss over 30 yr. of age were less authoritarian than younger Ss. High social status (caste) was associated with lesser authoritarianism. High income had an inverse relationship with authoritarianism. Rural Ss were more authoritarian than urban Ss. The reliability of the scale was high in these groups. Results are interpreted in terms of the cultural milieu from which the Ss came.—K. C. Panda.

11632. Raina, T. N. & Raina, M. K. (Regional Coll. of Education, Ajmer, India) **Perception of teacher-educators in India about the ideal pupil.** *Journal of Educational Research*, 1971(Mar), Vol. 64(7), 303-306.—Attempted to (a) determine what concepts teacher-

er-educators in India have of the ideal student in terms of characteristics they believe should be encouraged and discouraged, and (b) compare the results with concepts of teachers in the United States. Torrance's Ideal Pupil Checklist was administered to 100 teachers of education in teacher training colleges in Rajasthan. When the 62 characteristics of the Checklist were ranked, a rank-order coefficient of correlation of .76 was obtained between the ranks assigned by the Rajasthan teacher-educators and United States teachers. In general, the Rajasthan Ss emphasize the receptive nature of man and deemphasize man's self-acting nature more than United States teachers.—*Journal abstract.*

11633. Rian, Håvard. (U. Oslo, Inst. of Educational Research, Norway) **Teacher leadership and pupil reaction: The authoritarian-democratic dimension revisited.** *Scandinavian Journal of Educational Research*, 1969, No. 1, 1-15.—Conducted a $2 \times 3 \times 2 \times 2$ factorial experiment varying (a) teacher directivity, (b) 3 student teachers, (c) pupil preferences for teacher behavior, and (d) pupil scholastic ability. 144 male and female 7th graders served as Ss. Results indicate that teacher directivity and student achievement and satisfaction were not significant. It is suggested that the authoritarian-democratic dimension for evaluating teacher style may contain variables for which significance has not been determined. (40 ref.).—S. Knapp.

11634. Steer, Robert A. (Columbia U.) **The relationship between satisfaction with retirement and similarity of self-ratings for past occupation and present activity in educators.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6416.

11635. Strom, Robert D. (Ed.) (Arizona State U.) **Teachers and the learning process.** Englewood Cliffs, N.J.: Prentice-Hall, 1971. x, 534 p.—Presents a collection of articles discussing issues that are emerging from the changing educational scene. Topics covered include (a) respecting differences among pupils; (b) diminishing obstacles to achievement; (c) relating as a professional; (d) learning theory, a resource for method; (e) educating for creative behavior; (f) evaluation in the classroom; and (g) mental health and personality development.

11636. Ungerleider, Charles S., et al. (U. Massachusetts) **Strength training for beginning teachers.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 66-74.—As a person is not a valid judge of the quality of his own behavior, teacher-training programs should include means by which a cadet teacher obtains a better perspective of his performance, as interpreted by the pupils, than by appraising his own performance. The article presents a means to accomplish the objective of self-observation by the cadet teacher. The teacher performs to a class of adults who assume the roles of ordinary pupils. Later these adults indicate to the teacher his teacher strengths and weaknesses.—A. J. Ter Keurst.

11637. Zaborik, John A. (U. Wisconsin, Milwaukee) **Pupil's perception of teachers' verbal feedback.** *Elementary School Journal*, 1970(Nov), Vol. 71(2), 105-114.—Developed an instrument containing 28 segments of classroom dialogue. Each segment consisted of 3 parts: teacher solicitation, pupil response, and teacher verbal feedback. These 28 segments containing 28 types of feedback were presented to a randomly selected group of 42 3rd and 6th graders. The pupils were asked to identify with the script and then answer questions on the effect of the feedback. The types of feedback that nearly all the pupils saw as stimulating feeling and as giving

information on correctness contained simple praise-conformation. None of the types that were not seen as stimulating feeling or giving information contained simple praise-conformation, with the exception of one. The types of feedback that are regularly used are not necessarily the types that are the most valuable for provoking feeling and providing information on correctness, explanation, and directness.—S. R. Diamond.

11638. Zimmerman, Robert E. (U. North Dakota) **Teacher perceptions and personality characteristics associated with innovation.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6462.

SCHOOL LEARNING & ACHIEVEMENT

11639. Anderson, Gary J. (McGill U., Montreal, Quebec, Canada) **Effects of classroom social climate on individual learning.** *American Educational Research Journal*, 1970(Mar), Vol. 7(2), 135-152.—14 social climate properties of school classes were related to gains on 4 measures of learning in an attempt to explore group influence on the individual. Step-wise multiple regression analysis with product and quadratic terms was employed to relate characteristics of the class, represented by class mean scores on the Learning Environment Inventory, to residually adjusted measures for learning for individuals within the class. A large number of statistically significant relationships occurred between climate dimensions as class intimacy, cliqueness, friction, and difficulty, and the 4 learning criteria. The findings suggest that classroom social climate does affect individual learning, and that climate properties affect learning differentially for various measures of learning and for students differing in sex and mental ability. (19 ref.)—*Journal abstract*.

11640. Ausubel, David P. & Tenzer, Amy G. (City Coll., City U. New York, Center for Advanced Study of Education) **Components of and neutralizing factors in the effects of closed-mindedness on the learning of controversial material.** *American Educational Research Journal*, 1970(Mar), Vol. 7(2), 267-273.—Closed-mindedness was conceptualized as consisting of 3 components: dogmatism, a general affective component, attitudinal bias, a specific affective component, and informational bias, a specific cognitive component. Dogmatism significantly impaired the learning of an unfamiliar pro-Hanoi passage on the Vietnam war, and was suggestively counteracted by a neutralizing introduction. Pro-Hanoi Ss on the Attitudinal Bias Scale suggestively learned the passage more effectively than did the anti-Hanoi Ss. Informational bias had no significant effect on the learning of the passage. The failure of the cognitive component to influence learning was attributed to the Ss' lack of a stable, organized, and internally self-consistent system of beliefs regarding this particular controversial issue.—*Journal abstract*.

11642. Blair, John R. (U. Michigan) **The effectiveness of three classes of reinforcement on the performance of normal and low achieving middle class boys.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6394.

11643. Bonboir, Anna. (U. Louvain, Lab. of Experimental Pedagogy, Belgium) **Quelques modes d'approche du travail des écoliers: Etude des apprentissages scolaires: Cadre général.** [Some approaches to school work: Study of school learning: General outline.] *Revue de Psychologie et des Sciences de l'Education*, 1971, Vol. 6(1), 5-12.—Scientific pedagogy ensures a continuing exchange between researchers and practitioners regarding the nature of the learner and best educational practices. This article serves as an introduction to 3 research reports. (English & Flemish summaries)—S. S. Marzolf.

11644. Briggs, Richard D., Tosi, Donald J., & Morley, Rosemary M. (Bowie State Coll.) **Study habit modification and its effect on academic performance: A behavioral approach.** *Journal of Educational Research*, 1971(Apr), Vol. 64(8), 347-350.—Determined the effects of a treatment procedure which combined psychological conditioning with a well-known study technique (SQ3R) by F. P. Robinson (see PA, Vol. 35:5511) on the academic performance of "high-risk" female undergraduates (N = 20). It was hypothesized that Ss exposed to this procedure would demonstrate higher GPA's than a comparable control group. Results are in the predicted direction.—*Journal abstract*.

11645. Brilhart, Barbara L. & Brilhart, John K. (U. Nebraska, Omaha) **Field independence and academic achievement of engineering students.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 443-446.—Used the Hidden Figures Test as a group measure of field independence with 184 male engineering students. Scores did not correlate significantly with cumulative GPA or with freshman aptitude scores. Aptitude scores were a better predictor of success in an engineering program than the field-independence scores.—*Journal abstract*.

11646. Cantwell, Zita M. (Brooklyn Coll., City U. New York) **Teacher's perceptions of levels of performances of students from an economically disadvantaged urban area.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 593-594.—Tested the hypothesis of whether teachers' perceived levels of performance by grade (5th and 2nd) and subject area (language arts and mathematics) would be independent of performances on the Coloured Progressive Matrices by 175 5th graders and 216 2nd graders. Significant chi-squares suggested a direct relationship between perceptions and Matrices scores.—*Journal abstract*.

11647. Farley, Frank H. & Truog, Anthony L. (U. Wisconsin) **Academic achievement and resultant and academic achievement motivation.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 843-848.—Studied academic achievement, measured by a standard test over 4 subject matter areas, and a GPA score, as a function of resultant achievement motivation (RAM) and academic achievement motivation (AAM) in 76 undergraduates. The contribution of RAM to achievement was negligible and nonsignificant. Although AAM correlated significantly in a negative direction with achievement in natural science, the importance of this finding was discounted. It is concluded that achievement was not a significant function of achievement motivation, as measured. Directions for future research are outlined. (16 ref.)—*Journal abstract*.

11648. Froehlich, Edna B. (Columbia U.) **The relationship between visual memory for designs and early reading achievement.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6399-6400.

11650. Henderson, Norman B., Goffeney, Barbara; Butler, Bruce V., & Clarkson, Quentin D. (U. Oregon, Medical School) **Differential rates of school promotion from first grade for white and Negro, male and female 7-year olds.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 101-109.—Studied the retention policy of schools in the Portland, Oregon, area. The sample represented all children ($N = 901$) who had completed a 7-yr examination and were part of the Oregon Collaborative Study. Promotion-retention rates were analyzed by race, sex, standardized test performance, and socioeconomic level. Chi-square analysis of the data indicated that whites were retained more frequently than blacks and boys more frequently than girls. It is suggested that this differential promotion rate appears to result from both a higher incidence of extremely poor reading achievement (especially for white boys) and a more liberal promotion policy in the lower socioeconomic schools.—H. Kaczkowski.
11651. Henrikson, Harold A. (U. Illinois) **An investigation of the influence of teacher expectation upon the intellectual and achievement performance of disadvantaged children.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6278.
11652. Howe, Michael J. & Cavicchio, Patricia M. (U. Alberta, Edmonton, Canada) **Retroactive interference in a meaningful learning task.** *Alberta Journal of Educational Research*, 1971(Mar), Vol. 17(1), 49-53.—96 women studying to be dental assistants were assigned to 1 of 4 experimental conditions: 2 variations of interpolated tasks, similar and dissimilar to the original learning, and 2 variations of activity following interpolated passage, recall vs. read different materials. The scoring of the recall passage was divided into 20 successive units of nontrivial material. No statistically significant differences in recall were found between the 4 groups: similar interpolated material, recall required; similar interpolated material, recall not required; dissimilar interpolated material, recall required; and dissimilar interpolated task, recall not required.—N. M. Chansky.
11653. James, Pamela E. (U. Liverpool, England) **Video feedback in learning beginning trampoline.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 669-670.—Explored (a) the effect of visual feedback (supplied by videotape) compared with verbal feedback in learning beginning trampoline, and (b) the effect of verbal ability on Ss' interpretation of feedback. 18 11-12 yr. old boys were assigned to 2 groups: Group V (visual), $N = 8$; Group NV (nonvisual), $N = 10$. The groups were matched for performance on beginning trampoline, general physical ability, and verbal ability as measured by the Mill Hill Vocabulary Scale, Form 1, Junior. Results show some superiority of Group V over Group NV ($p > .05$). However, Ss at all levels of verbal ability benefitted from visual feedback, while only Group NV Ss with high verbal ability achieved a high performance score ($r = .6$, $p < .05$).—*Journal abstract.*
11654. Khoury, Marcia A. (U. Alabama) **Reading achievement of second grade pupils taught by teachers with understanding attitudes toward pupils and by teachers with evaluative attitudes toward pupils.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6405.

11656. Kyöstiö, O. K. & Vaherva, T. (U. Oulu, Teachers Coll., Finland) **Reading and forgetting among young children.** *Scandinavian Journal of Educational Research*, 1969, No. 3, 129-146.—Conducted an experimental study to assess the effectiveness of the synthetic and analytic methods of teaching, the amount of forgetting, the occurrence of spontaneous learning, and the optimal age at which children may be taught to read. 108 male and 108 female kindergartners in experimental groups and 100 male and 88 female 1st graders in control groups were tested to measure their reading ability before and after a period of learning, and after the summer interval. 33 male and 46 female kindergartners were tested without having experienced any reading instruction. Results indicate that (a) Ss were able to learn to read earlier than the present starting age in Finnish schools; and (b) intelligence, age, social status, and teaching method affected learning. Procedural difficulties which diminish the generalizability of the results are discussed. The case histories of a good and a poor performer in the study are presented. (33 ref.)—S. Knapp.

11661. Matheson, Neil E. (U. Southern California) **Midmorning nutrition and its effect on school-type tasks.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6408.
11662. McKeachie, W. J. & Lin, Yi-Guang. (U. Michigan) **Sex differences in student response to college teachers: Teacher warmth and teacher sex.** *American Educational Research Journal*, 1971(Mar), Vol. 8(2), 221-226.—Few studies of teaching effectiveness have taken into account sex of instructor as a relevant variable. Analysis of data in 5 different studies involving introductory psychology, mathematics, and French courses indicated that the effect of teacher warmth on student achievement depends not only upon the sex and need affiliation of students but also upon the sex of the

instructor. Results previously appearing to be non-replicable turned out to be replicated when analyzed separately for male and female instructors. For women instructors a warm, interpersonally oriented style was effective; for men teachers, such a style was effective only for women students and for men high in need affiliation.—*Journal abstract.*

11663. Mehta, Prayag & Kanade, H. M. (Indian Inst. of Mass Communication, New Delhi, India) **Motivation development for educational growth: A follow up study.** *Indian Journal of Psychology*, 1969, Vol. 44(1-4), 20.—Reports results of a follow-up study conducted 2 yr. after an experiment in motivation training of teachers and their pupils at some secondary schools. There was a significant drop in their level of need for achievement as compared to that obtained by them immediately following the training. Results support the view that the impact of motivation training on scholastic performance might be felt more later than sooner. In 1 school out of 20 it was reported that the pupils developed qualities like diligence, responsibility, and cooperativeness.—*B. Roy.*

11664. Niskanen, Erkki A. (U. Helsinki, Finland) **School achievement and personality: Description of school achievement in terms of ability, trait, situational and background variables: II. Operations at the variable level.** *Research Bulletin, Institute of Education, U. Helsinki*, 1968(Oct), No. 22, 124 p.—Presents the method-centered portion of a 4-part study on school achievement and personality. The construction of the variables used in the study, their psychometric properties, the combination of dimensions, and the mathematical and statistical operations performed are emphasized. Ss were 7th grade children attending a citizenship school over a 2-yr period. Separate studies involved 177, 165, and 157 Ss. An average of 570 test stimuli were administered to each S. Results and discussion are presented in Part IV. (53 ref.)—*P. McMillan.*

11665. Nyiri. **Latéralité et difficultés scolaires.** [Laterality and difficulties in school.] *Bulletin de l'Institut National d'Etude du Travail et d'Orientation Professionnelle*, 1970(Nov), Vol. 26(5), 343-351.—Laterality of hand, foot, ear, and eye were established for 150 13-17 yr. old Ss, and the various proportions of unilateral and mixed lateral Ss in 4 academic achievement groups counted. In a 2nd phase a diagnostic test by LeFavrais (Alouette) was used on 42 8-12 yr. old dyslexic children. Among the 31 positively identified dyslexics 27 had mixed sensory-manual laterality. Changes in laterality were observed on twins.—*M. G. Strobil.*

11667. Pascal, Charles E. (McGill U., Montreal, Quebec, Canada) **Instructional options, option preference and course outcomes.** *Alberta Journal of Educational Research*, 1971(Mar), Vol. 17(1), 1-11.—Ss were 185 undergraduates enrolled in a course which permitted them to select 1 of 3 instructional options: independent study, lecture, and lecture and discussion. Assignment to groups was on a random basis. All Ss received the same criterion test of cognition, a test of cognitive achievements, an attitude toward psychology questionnaire, course evaluation, and evaluation of a novel article. No difference in grades was found between

the 3 instructional methods; students in lecture and lecture-discussion sections scored higher on the achievement test than did those in the independent study group. Students assigned to an instructional option of their choice held more favorable attitudes toward psychology. Groups did not differ with regard to application of course material. Those in the independent study group scored better than the other groups on the evaluation of the novel article.—*N. M. Chansky.*

11668. Peters, Nathaniel A. (U. Wisconsin) **The application of Jensen's bidimensional model of learning to the reading process.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6411.

11669. Rusch, Reuben R. (State U. New York, Albany) **Note on the validity of the claim that final closure is related to reading achievement.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 394.—Determined whether good and poor 1st grade readers scored differently on the Higgins-Wertman Test of Visual Closure. The sample consisted of 30 boys and 30 girls (the highest and lowest scoring Ss) from 7 1st grade classes. Results of the factorial design provide a type of concurrent validity for the claim that the Higgins-Wertman Test was developed to assess intellectual functioning, particularly with respect to reading readiness and disability.—*Author abstract.*

11670. Samtur, Susan J. (City Coll., City U. New York, School of Education) **The effects of noise on a complex task.** *Graduate Research in Education & Related Disciplines*, 1969(Spr), Vol. 4(2), 63-81.—Investigated the effect of a constant or fluctuating noise on a complex reading task and considered the effect of the noise on easy and difficult problems within the test. Ss were 25 3rd graders, 13 boys and 12 girls, and the group served as its own control. Most of the previous literature suggests that noise does affect achievement, when the task presented is difficult and long enough to permit fatigue. Results of a few studies were in contradiction to the hypothesis of this experiment and most other experiments, generally because the factors of task complexity and sustained periods of time were absent during the testing. The tests were administered under 3 conditions—quiet, constant noise, and intermittent noise—to the same S group. Overall findings do not support the hypothesis. Rather, the Ss, especially the boys, did significantly better under the noisy conditions. Various explanations are considered. (15 ref.)—*Journal abstract.*

11671. Schoenfeldt, Lyle F., Bayer, Alan E., & Brown, Marsha D. (U. Georgia) **Delayed and normal progress college students: A comparison of psycho-social characteristics and career plans.** *American Educational Research Journal*, 1970(Mar), Vol. 7(2), 235-250.—Compared persons who delayed entrance into college with those who made "normal" college progress. Groups were selected from the over 100,000 11th graders who participated in the 1960 Project TALENT testing and responded to the follow-ups in 1962 and 1966. Delayed entrants represent a probable increment to the baccalaureate pool of 12% for the males and 4% for the females. Scores of the delays on selected cognitive and noncognitive variables (including socioeconomic status) were generally below those in the normal progress group. Entrants with a higher percentage of delay were black, relied on savings or bank loans to go to college, had peers who did not attend college, and changed career goals. (18 ref.)—*Journal abstract.*

11672. **Shah, Farhat.** (U. Wisconsin) **Socio-psychological determinants of academic achievement of children in Pakistan.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6288.—academic achievement, father's occupation & parental interest in education & parental control & self-esteem, high school students, Pakistan
11673. **Shrable, Kenneth & Sassenrath, Julius M.** (U. California, Davis) **Effects of achievement motivation and test anxiety on performance in programmed instruction.** *American Educational Research Journal*, 1970(Mar), Vol. 7(2), 209-220.—114 college Ss were administered an achievement motivation, a test anxiety, and an initial achievement test and were categorized as being either high (above the median) or low on each. Ss then completed a programmed instruction task and their performance on 3 dependent variables was assessed: (a) time to complete the program, (b) errors, and (c) retention. The results theoretically most interesting were: (a) there were no significant differences in errors due to achievement motivation, (b) high-test-anxious Ss had fewer errors than low-test-anxious Ss, (c) the interaction effect of achievement motivation and test anxiety on errors was significant, (d) high-achievement-motivated Ss had lower retention scores than low-achievement-motivated Ss, and (e) there was no reliable difference in retention due to test anxiety. Implications of these findings for the theory of achievement motivation and research on programmed instruction are discussed. (27 ref.)—*Journal abstract.*

11677. **Tadin, Ivan & Perko, Anera.** (Community Office for Employment, Split, Yugoslavia) **Razlike u specifičnom treningu u gimnazijama i uspešnost na studiju.** [Efficiency in university curriculum as related to the science or human orientation in high school.] *Revija za Psihologiju*, 1970, Vol. 1(2), 23-30.—The number of students enrolling the 3rd semester was insignificantly different whether they had graduated from a science-oriented or a humanities-oriented high school and then enrolled at some science-oriented faculty. The same was true for students studying on humanistic faculties.—*English abstract.*
11678. **Thompson, Diane D.** (U. Connecticut) **Attributions of ability from patterns of performance made by advantaged and disadvantaged children.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6418.
11679. **Thomson, Eric W. & Galloway, Charles G.** (U. Victoria, British Columbia, Canada) **Material reinforcement and success in spelling.** *Elementary School Journal*, 1970(Apr), Vol. 70(7), 395-398.—Ss were 91 8-14 yr. old boys and girls in 3 classrooms of an elementary school in British Columbia. During the 1st 3 mo. of the school year, the teachers taught spelling by the method of their choice. During the 2nd 3-mo period spelling was taught and tested in the same manner as during the 1st 3-mo period. However, with the spelling record of the previous week as a basis of comparison, material reinforcement paired with social reinforcement was given to each S who equaled or bettered his or her score of the previous week. During the 3rd 3-mo period, material reinforcement was issued on an intermittent schedule and social reinforcement maintained on a continuous basis. Results "indicate that a continuous schedule of material reinforcement paired with social reinforcement given for appropriate spelling responses seems to produce an increase in children's spelling proficiency as measured by weekly spelling tests."—*S. R. Diamond.*
11680. **Walberg, Herbert J. & Ahlgren, Andrew.** (U. Wisconsin) **Predictors of the social environment of learning.** *American Educational Research Journal*, 1970(Mar), Vol. 7(2), 153-167.—Several earlier studies demonstrated the predictability of cognitive and non-cognitive class learning from student perception of the social environment of learning. As a basis of formulating hypotheses for experiments, the present correlational study investigated the predictability of the social environment variables from 6 pretests, 7 personality scales, 20 biographical items, 4 course-experience variables, 2 class size terms, IQ, and the fraction of girls in the class. With 144 high school physics classes as the units of analysis, canonical and multiple correlation revealed that significant ($p < .001$) variance in the class mean environment scores can be predicted from class means on any 1 of the 5 predictor batteries or single predictor variables. The composition of the class in terms of the biological characteristics of its members appears to be the most potent predictor. (22 ref.)—*Journal abstract.*

11685. **Yeatts, Pearlina P. & Strag, Gerald A.** (U. Georgia) **Flexibility of cognitive style and its relationship to academic achievement in fourth and sixth grades.** *Journal of Educational Research*, 1971(Apr), Vol. 64(8), 345-346.—Investigated whether students who tend not to shift cognitive styles will achieve equally high on verbal and quantitative tasks as students who shift cognitive styles. The Kagan Cognitive Style test and the California Achievement Test were given to 62 4th graders and 59 6th graders. Of the 31 Ss who did not change their cognitive style, 25 were identified as inflexible and performing below grade level

and only 6 at grade level. Findings suggest that (a) it is inappropriate to consider 1 cognitive style superior to another, and (b) academic performance is a function of the interaction of cognitive flexibility and fluency and the specific task requirements.—*Journal abstract.*

Prediction

11687. Dispenzieri, Angelo; Giniger, Seymour; Reichman, Walter, & Levy, Marguerite. (Baruch Coll., City U. New York) **College performance of disadvantaged students as a function of ability and personality.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 298-305.—Compared the academic motivation of 492 disadvantaged undergraduates in a special community college program to that of 257 regular matriculants. Several ability and aptitude tests were administered including the WAIS, the Otis Group Intelligence Scale, and the Preliminary Scholastic Aptitude Test. Multiple-regression analyses were made of measures of ability and several other personality characteristics as predictors of academic success for the special-program students. While the groups did not differ in degree of motivation, somewhat different patterns emerged, regular matriculants being more concerned with social evaluation and special students with self-worth. Predictors most similar to activities required for successful college performance were those most highly correlated with the criteria. High school average, Otis IQ, study habits and attitudes, and reality of aspiration level were the best predictors. It is concluded only 22% of the variance in college success can be accounted for among the special-program students. (15 ref.)—*Journal abstract.*

11690. Stanley, Julian C. (Johns Hopkins U., Center for Social Organization of Schools) **Predicting college success of educationally disadvantaged students.** *Center for Social Organization of Schools Report*, Johns Hopkins U., 1970(Sep), No. 79, 40 p.—Reviews the literature and concludes that admission to selective colleges should be based substantially on test scores and high-school grades, whether or not the applicant is from a minority racial, ethnic, or socioeconomic group. "Open admissions" is seen as applicable to state and local systems of higher education, but not to every individual college and university. Principles of prediction, learning, and guidance would lead to the placement of college applicants in institutions that are neither too difficult nor too easy for each individual. The gap between the academic promise of educationally disadvantaged applicants and the usual minimum demands of the institution should not be greater than provisions for

remediation, tutoring, coaching, and perhaps curricular reform can bridge. (6 p. ref.)—*Journal abstract.*

Overachievement & Underachievement

11691. Elliott, Katherine K. (Wayne State U.) **A cross-cultural study of non-intellectual correlates of achieving and low achieving boys.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6872-6873.

11693. Hirsch, Jay G. & Costello, Joan. (Inst. for Juvenile Research, Chicago, Ill.) **School achievers and underachievers in an urban ghetto.** *Elementary School Journal*, 1970(Nov), Vol. 71(2), 78-85.—Presents some psychiatric and psychological findings from a group of 23 intensively studied children evenly divided between boys and girls and achievers and underachievers. With intelligence quotient, determined by the Lorge-Thorn-dike Intelligence Tests, and family circumstances controlled, differences in academic achievement as measured by school grades and standardized achievement tests could reasonably be expected to reflect variations in individual characteristics of the children and variations in their family experience of a more subtle nature than merely the fact of the presence of 2 parents in the home. The psychiatrist saw the children in 3 sessions and the psychologist administered the WISC, TAT, Rosenzweig Picture-Frustration Study, a sentence completion test, tests of visual and auditory perception, and a test for impulse control. The variables that seemed most important for distinguishing between achievers and underachievers were the psychiatrist's and the psychologist's ratings of the children's interpersonal relationships and self-concepts.—S. R. Diamond.

CURRICULUM & PROGRAMS

11695. Adams, Leah D. (U. Michigan) **The effect of training on the linear ordering ability of prekindergarten disadvantaged children.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6391.

11696. Alschuler, Alfred. (Harvard U.) **Psychological education and growth communities.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 172-183.—The problems of psychological education are comparable to others that represent a major breakthrough in knowledge. The extrinsic problems of psychological education include the lack of facilities that offer training to prospective workers in that area and the lack of concern of most educators in the training of the whole child. Among the intrinsic problems are the lack of clarity, and whether or not psychological educational training has a lasting effect on the trainee. Another problem is the identification of the ingredients of the courses in psychological education that produce long-term desirable effects. The history of growth communities that nurtured psychological education has been discouraging. Over 200 of such utopian communities have failed. The longest-lived utopian communities that emphasize psy-

chological education are the kibbutzim that are held together by the daily problem of life and death.—A. J. Ter Keurst.

11697. **Alschuler, Alfred.** (Harvard U.) **The origins and nature of psychological education.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 1-16.—A new approach is discerned that combines education with psychology courses for the purpose of developing the human potential in normal persons. Some of these emphases in ideal adult functioning include achievement motivation, creative thinking, interpersonal sensitivity, identity, self-reliance, and value clarity. The origin of this newer emphasis in psychology is the shift away from almost complete concern about the abnormal to the life of the normal. This new emphasis is also the result of the dissatisfaction with the program of the secondary schools in their underemphasis on the students' preparation for mature adulthood. The goals of psychological education are the development within a person of a constructive dialogue with one's fantasy life, the use of nonverbal exercises as found in meditation, the exploration of one's emotional responses to the world, and realizing the importance of adjustment to the "here and now." Courses in psychological education should result in voluntary internalized behavior and individual responsibility.—A. J. Ter Keurst.

11698. **Alschuler, Alfred & Thompson, Roy.** (Harvard U.) **How to increase achievement motivation.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 95-108.—The achievement motive can be described as "entrepreneurial" behavior by which a person seeks to attain high standards of excellence. The person with a high achievement motivation is generally restless, self-confident, seeks out situations that he can control, is sensitive to the feedbacks to his behavior, and is socially mobile upward. Increasing one's achievement motivation is usually indirectly accomplished by implanting a striving for excellence, such as emphasizing the importance of self-motivation and self-reward. Several examples are discussed in which the emphasis on group norms of performance in the classroom fails to reinforce positively the achievement motives of the individual pupil.—A. J. Ter Keurst.

11699. **Belasco, Simon.** (Pennsylvania State U.) **C'est la guerre? Or can cognition and verbal behavior co-exist in second language learning.** *Modern Language Journal*, 1970(Oct), Vol. 54(6), 395-412.—Disputes the assumption that a cognitive approach is mutually exclusive with a verbal-behavior approach. Nonetheless, nothing new in terms of developing language rather than practicing speech can be accomplished by merely replacing the term "grammar translation" by the term "cognition." Primacy must be given to listening and reading over the other skills. Vocalizing does help, but it must be preceded in great depth by the acquisition of the listening skill. It is asserted that the center of the entire pedagogical philosophy of acquiring language is the undergraduate foreign language major. Real language will not develop within departmental programs dominated by linguistic, literary, educational, anthropological, or psychological philosophies.—*Journal summary.*

11700. **Bilker, Larry M.** (U. Florida) **Locus of I-E control expectancy and expectancy changes of disadvantaged mothers.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6869.

11701. **Bjork, Robert M.** (George Peabody Coll. for Teachers) **An international perspective on various**

issues in sex education as an aspect of health education. *Journal of School Health*, 1969(Oct), Vol. 39(8), 525-537.—Includes (a) an overview of sex instruction in public schools, (b) the degree of student sophistication, (c) the morality of premarital intercourse and conception, and (d) masturbation.—G. S. Spitzer.

11702. **Boe, Sue.** (Pharmaceutical Manufacturers Assn., Consumer Services, Washington, D.C.) **Philosophy and objectives for a drug education program.** *Journal of School Health*, 1971(Jan), Vol. 41(1), 11-16.—A curriculum guide is offered for use by "teachers from kindergarten through grade twelve" in implementing drug education programs for youth. A multidisciplinary approach is presented.—G. S. Spitzer.

11703. **Bonboir, Anna.** (U. Louvain, Lab. of Experimental Pedagogy, Belgium) **Quelques modes d'approche du travail des écoliers: Contribution à la pédagogie expérimentale de la langue maternelle.** [Some approaches to school work: A contribution to the experimental pedagogy of the mother tongue.] *Revue de Psychologie et des Sciences de l'Education*, 1971, Vol. 6(1), 34-47.—Presents some considerations about grammatical analysis teaching, and results of research on the knowledge of grammatical functions of 6th-yr elementary schoolchildren. The problem was whether the grammatical terminology of functions was possessed to the same extent as the capacity to "grasp" these functions. 2 types of tests were used: Analysis I which was concerned with the formal aspect, i.e., knowledge of the functions and the nature of words or sets of words, together with their exact denomination. Analysis II concerned the functional aspect, i.e., the understanding of the meaning of functions, i.e., the existing relationships among words or word sets of a sentence excluding any terminology. 3 parallel forms were established for each test. The formal analysis appeared to be more difficult than the functional one. The synthesis of collected observations shows the existence of lags and confusions about the different analyzed notions. (Flemish summary)—*English summary.*

11704. **Boroughs, Mary C.** (Michigan State U.) **The stimulation of verbal behavior in culturally disadvantaged three-year-olds through a program of mother-child interaction at home using children's books.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6890-6891.

11705. **Breyer, Norman L., Calchera, David J., & Cann, Christine.** (U. Connecticut) **Behavioral consulting from a distance.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 172-176.—Investigated the efficacy of behavior modification in a 5th grade classroom taught by a 1st-yr teacher. The behavior modification program was conducted by 2 consultant Os who were supervised by a practicum supervisor located in a university setting. Results show a significant and stable improvement in both teacher and classroom behavior.—H. Kaczowski.

11706. **Brown, George I.** (U. California, Santa Barbara) **An introduction to humanistic education: A weekend workshop for educators.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 138-155.—Describes a weekend seminar for educators in the use of affective teaching techniques. Included among the techniques is the formation of dyads between strangers who seek to communicate by means other than by mouth noises. The general theory of the various exercises was that participants in the program should learn to communicate by dispensing with the use of the "psy-

chological masks" behind which individuals hide.—A. J. Ter Keurst.

11707. Coop, Richard H. & Sigel, Irving E. (U. North Carolina, Chapel Hill) **Cognitive style: Implications for learning and instruction.** *Psychology in Schools*, 1971(Apr), Vol. 8(2), 152-161.—Reviews the theory and research in the area of cognitive style. It is concluded that models for individualized instructional programs are difficult to develop because of the variability in information processing. It is suggested that teachers should become aware of the relationship between teaching strategies and information processing.—H. Kaczkowski.

11708. Core, Harry M. (Lake County Mental Health Clinic, Mentor, O.) **Mental health consultation in a Head Start program.** *Hospital & Community Psychiatry*, 1970(Jun), Vol. 21(6), 183-185.—Describes a 1968 Head Start (HS) program in which an HS caseworker was assigned to go with clinic consultants on all classroom visits. The consultant's main task was to help teachers reduce their expectations to a realistic level and recognize limited gains made by their students. They also helped establish communications between teachers and their students' parents. By the end of the 7-wk HS program, 105 out of 180 children showing maladaptive behavior had shown marked improvement and many referrals had been made to other agencies. The socializing process and enriched environment were considered major influences in modifying the Ss' behavior.—P. Hertzberg.

11709. Dearden, Marlin H. & Jekel, James F. (Griffin Hosp., Drug Education Program, Derby, Conn.) **A pilot program in high school drug education utilizing non-directive techniques and sensitivity training.** *Journal of School Health*, 1971(Mar), Vol. 41(3), 118-124.—"On the basis of . . . 5 hypotheses . . . it was decided to allow . . . [12 high school] students to develop a drug abuse questionnaire and to administer it to the student body of the school. The ultimate goal however, was the development of a method of drug education based upon the group process that took place among the students as they developed and administered the questionnaire." A discussion of the student questionnaire and evaluations of the student discussion groups are included.—G. S. Spitzer.

11710. Di Salvi, R. Daniel. (Newark State Coll.) **A remedial program for undergraduate evening students.** *Adult Education*, 1971(Spr), Vol. 21(3), 186-195.—Conducted a factorial experiment with 100 undergraduate evening students to evaluate 5 degrees of treatment and 2 levels of college experience. Results are reported in terms of postmeasure gains on 4 dependent variables: (a) study orientation, level of comprehension, (b) speed of comprehension, and (c) GPA. Differences between means of all treatment groups were not statistically significant except for speed of comprehension, which was also statistically affected by the amount and kind of treatment received. Levels of experience did not contribute significant differences to mean performances. It is concluded that evening students will voluntarily participate in a reading-study skills program, and that participation is accompanied by improvement in academic performance. (24 ref.)—*Journal abstract.*

11711. Engle, John D. (Princeton High School, Cincinnati, O.) **Giftedness and writing: Creativity in the classroom.** *Gifted Child Quarterly*, 1970(Win), Vol. 14(4), 220-229.—Although the necessity of instruction in practical writing techniques is acknowledged, it is

stressed that creative writing must also be a part of the curriculum. The approach for initiating projects is extremely open in that it is begun with a single word or picture and pupils are told to follow whatever thought impulses they receive. In addition to this technique, the capacities of the mind are stressed, and an attempt is made to convince pupils that any limitations they experience are self-imposed. Another of the goals is to get society to view writing for its own merit and not allow factors of the author's age or status to interfere.—S. Krippner.

11712. Feshbach, Seymour & Adelman, Howard S. (U. California, Los Angeles) **An experimental program of personalized classroom instruction in disadvantaged area schools.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 114-120.—Describes the general conceptualization of personalized instruction that was initiated in 8 disadvantaged area-elementary schools. Emphasis is placed on pupil responsibility in the learning process as manifested in self-direction, self-selection, self-evaluation, and interstudent cooperation. Some implications for future investigations are suggested.—H. Kaczkowski.

11713. Fransen, Forest J. & Landholm, Joanne. (Thomas A. Edison School, Denver, Colo.) **Changing behavior by personalizing learning.** *Journal of School Health*, 1971(Feb), Vol. 41(2), 70-73.—Describes a program in an elementary school where members of multidisciplinary teams met with groups of students for discussion sessions. Goals were set to: (a) effect a change in behavior, (b) improve self-image, and (c) effect an improved climate in group living. No research design was utilized. Results of the program are discussed.—G. S. Spitzer.

11714. Freiheit, Beryle R. (United States International U., San Diego, Calif.) **Effectiveness of a daily auditory training program for Spanish-speaking children learning English.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6399.

11715. Friedman, Sonya K. (Wayne State U.) **A structured curriculum in perceptual development designed to increase the reading readiness scores of kindergarten children.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6874.

11716. Gendel, Evalyn S. & Green, Pauline B. (State Dept. of Health, Topeka, Kan.) **Sex education controversy: A boost to new and better programs.** *Journal of School Health*, 1971(Jan), Vol. 41(1), 24-28.—Reports on a survey of education about human growth and development, family life, and sex education in Kansas schools. Short-term objectives are delineated as are the strengths and limitations of the study. A list of recommendations is included.—G. S. Spitzer.

11717. Harvey, Ann L. (Cornell U.) **Goal-setting behavior in high school girls.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6403-6404.

11719. Herman, A. B. (U. Calgary, Alberta, Canada) **Effects of high school program choice on self-concept.** *Alberta Journal of Educational Research*, 1971(Mar), Vol. 17(1), 13-18.—A 51-item Q-sort was administered to 174 "matriculation" and 131 vocational, business, or general course 10th graders. Ss were required to indicate actual as well as ideal self. No significant

difference in self-rating was noted when matriculated Ss were compared with the others. Neither were any between group sex differences noted. Females within the nonmatriculated groups rated themselves higher than did males within that group. Other significant differences were noted in both matriculated and nonmatriculated groups with respect to intelligence. Those Ss above average in intelligence were found to rate themselves higher than did those below average in intelligence.—*N. M. Chansky.*

11720. **Hoyman, H. S.** (U. Illinois) **Our most explosive sex education issue: Birth control.** *Journal of School Health*, 1969(Sep), Vol. 39(7), 458-470.—Calls for the availability of birth control information in sex education. Included is a summary description of sex education in Sweden, and the implications it has for American schools.—*G. S. Spitzer.*

11721. **Johnson, Carl I.** (U. Denver) **A descriptive study of the relationship of certain critical values and motivational achievement to self-concept in reticent and non-reticent speakers.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6757-6758.

11722. **Katz, Richard.** (Brandeis U.) **A solo-survival experience as education for personal growth.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 38-53.—Presents a personal account of reactions to a 3-day solo-survival experience on an uninhabited wooded island. Such an experience can lead to personal growth in keeping with the person's abilities to rely on his own character resources, such as initiative, responsibility, and self-discipline. Comparison is made between solo-survival experiences and certain initiation rites of the Plains Indians, religious retreats of the Jesuits, and meditation exercises of the Zen Buddhists.—*A. J. Ter Keurst.*

11723. **Kleinerman, Gerald; Grossman, Michael; Breslow, James, & Goldman, René.** (St. Luke's Hosp. Center, Div. of Community Psychiatry, New York, N.Y.) **Sex education in a ghetto school.** *Journal of School Health*, 1971(Jan), Vol. 41(1), 29-33.—Teaching-learning about sex is a complex enterprise wherein issues of content and process deserve careful attention. This report describes a particular approach, the purposeful solicitation of questions on sex from the students by the teacher. Its value is twofold: (a) concrete documentation of the details of student concern in sexual matters, and (b) facilitation of the actual educational process in ways beneficial to both teacher and student. The student questions are categorized and presented. They stand as sufficient testimony to the necessity and potential usefulness of sex education programs in the school system today.—*Journal summary.*

11724. **Lake, Dale.** (Boston U.) **Sensitivity training: Some cautions and hopes.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 156-171.—The training (T) group or sensitivity training is not an end in itself but a means to an end. As suggested by J. P. Campbell and M. D. Dunnette (see PA, Vol. 42:16204), there are few, if any, educational problems for which the T group represents a sufficient solution. The T group may be considered as a tool which may assist persons in facing the ordeal of change. 1 of the results of a T group experience is the concept of self-renewal. By this concept the organization and its environment are constantly appraised in the light of its objectives. This process may result in the clarification of objectives and an exami-

nation of the means developed to attain such objectives.—*A. J. Ter Keurst.*

11725. **Larsen, Ronald L. & Boody, Charles G.** (Ohio U.) **Some implications for music education in the work of Jean Piaget.** *Journal of Research In Music Education*, 1971(Spr), Vol. 19(1), 35-50.—Presents a short summary of Piaget's research on the qualitative development of intellectual structures, followed by discussion of 2 implications: (a) "The teacher must provide needed concrete data (generally 'perceptions' in the case of music) for the child to manipulate." (b) "The learning situation must be structured so that the child is only required to use 1 grouping at a time in his thought manipulations."—*D. Higbee.*

11726. **Lempert, Henrietta.** (South Shore Protestant Regional School Board, Montreal, Quebec, Canada) **Volunteers as tutors of exceptional children.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 129-134.—Describes a pilot study to determine the feasibility of establishing a learning clinic staffed by supervised parent volunteers within an elementary school located in a culturally disadvantaged neighborhood.—*H. Kaczkowski.*

11727. **Machen, Robert B.** (American U.) **The effect of ten hours of instruction in sex education on anxiety related to sex concepts.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6407.

11728. **Mantz, Genelle.** **A mental health unit for fourth and fifth grades.** *Journal of School Health*, 1969(Nov), Vol. 39(9), 658-661.—Describes a brief mental health project wherein certain goals were established to foster the mental health of 4th and 5th graders.—*G. S. Spitzer.*

11729. **McConnell, Freeman & Horton, Kathryn B.** (Vanderbilt U., Medical School) **Effects of early language training for culturally disadvantaged preschool children.** *Journal of School Health*, 1969(Nov), Vol. 39(9), 661-665.—Describes a 4-yr project wherein early language training for culturally disadvantaged preschool children is emphasized. Preliminary results are discussed.—*G. S. Spitzer.*

11730. **Nevala, Leo R.** (U. Wisconsin) **A study of the relationships of selected socio-psychological and demographic factors to the proclivity to continue education and training in a program for disadvantaged adults.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6333.

11731. **Nicholas, John R.** (U. California, Berkeley) **Modality of verbal instructions for problems and transfer for a science hierarchy.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6409-6410.

11733. **Rice, James A.** (U. Houston) **Heart Start screening: Effectiveness of a teacher-administered battery.** *Perceptual & Motor Skills*, 1971(Apr), Vol. 32(2), 675-678.—Studied a number of issues for 153 Head Start children (66 Negroes, 71 Latins, and 16 Caucasians). Screening instruments included (a) the Otis-Lennon Mental Ability Test, the Auditory Vocal Sequencing subtest of the Illinois Test of Psycholinguistic Abilities. Experimental Edition, and the Bender Gestalt Test. The principal conclusions are: (a) these children are significantly more deficient in the perceptual-motor areas, race notwithstanding, than in either the areas of mental

ability or auditory memory, (b) the battery has effectively selected children for individual psychological evaluation insofar as measured intelligence is the criterion, (c) even within the scope of a single program, community differences may exist, and as a wide consequence, no single set of training procedures is likely to be adequate for all communities, and (d) ethnic differences in the various skill areas were significant.—*Journal abstract.*

11734. Schneiderman, Gerald M. (New York U.) **The relationship of cognitive differentiation of types of black history course content and attitude change of black seventh-grade students.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6413.

11735. Simon, Sidney B. (Temple U.) **Promoting the search for values.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 75-84.—The difficulty in teaching values is that they are not usually the outcome of direct verbal instruction but are implanted by indirect non-verbal means, such as the modeling processes. The strategies for value clarification or value structuring include the use of weekly individual-reaction questionnaires by which the S indicates his gripes and high points, the use of autobiographies, time diaries, and reactions to ambiguous situations. Some of the criteria that structure the teaching of values are: the values should be socially cherished, a part of a repeated pattern, chosen from alternatives, freely chosen after due reflection, socially reinforced, and become motives for action.—A. J. Ter Keurst.

11736. Slapo, Daniel. (City Coll., City U. New York, School of Education) **The effect of problem-solving training on the creative art work of sixth grade students.** *Graduate Research in Education & Related Disciplines*, 1969(Spr), Vol. 4(2), 42-62.—Studied how to help children incorporate more original ideas into their art production. Ss were 30 6th graders. The instructional material was a series of problem-solving tasks presented in detective stories with cartoon illustrations in booklet form. There were 16 lessons with an average of 35 pages each. An opaque projector was used in order for the trainer to read to the entire class at 1 time and was followed up by oral discussions of the problems. The test was a framed 6" x 9 1/2" paper on which the S drew a picture appropriate to children playing in a school yard. Ss' drawings were evaluated by 4 art teachers as to whether they were stimulus-free or stimulus-bound, and on originality. Results indicate that the experimental group of 15 did significantly better on these variables than did the 15 controls. Findings suggest that school children are trained to give responses similar to teachers' directions. Training by projecting the lessons on a screen to the entire class encouraged oral discussion and produced enthusiasm and involvement. Further study is needed to see if this creative expression remains with these Ss or if continuous training is necessary. The study indicates that creative expression can be stifled or developed in accord with atmosphere and curriculum variables. (34 ref.)—*Journal abstract.*

11737. Stevens, Virginia R. (U. Akron) **Changes in self-concept resulting from participation in college compensatory education programs as measured by Edwards' Personality Inventory.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6417.

11738. Stine, Oscar C., Saratsiotis, John S., & Furno, Orlando F. (U. Maryland, Baltimore) **Selected neurologic and behavioral findings of children entering an**

early school admissions project from culturally deprived neighborhoods. *Journal of School Health*, 1969(Sep), Vol. 39(7), 470-477.—Describes and discusses the frequency of selected neurological measurements in children categorized as culturally deprived who were introduced to public education at age 4. The process consisted of: (a) parent interview, (b) health measurements, and (c) mental measurement. The importance of the multiple-discipline evaluative approach in helping culturally disadvantaged children is stressed.—G. S. Spitzer.

11739. Whitman, Myron & Whitman, Joan. (U. Illinois, Chicago Circle) **Behavior modification in the classroom.** *Psychology in the Schools*, 1971(Apr), Vol. 8(2), 176-186.—Reviews the theoretical rationale for behavior modification and compares it to traditional psychotherapies. Some behavior modification techniques for the classroom management of maladaptive behavior are suggested.—H. Kaczowski.

11740. Wolfe, Barry E. (U. Florida) **A comparison of the impact of two kindergarten programs on the creative performance of disadvantaged Negro children.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6886.

Teaching Methods & Teaching Aids

11741. Bjerstedt, Åke. (School of Education, Malmö, Sweden) **System analysis in instructional programming: The initial phases of the program construction process.** *Didakometry*, 1971(Apr), No. 30, 119 p.—Describes the construction of a self-instructional system as a process with 3 main phases: (a) system analysis: preparatory work; (b) system synthesis: construction of a preliminary system version; and (c) system modification and evaluation: postconstruction control and improvement. An introductory discussion of some basic principles of instructional programming is presented, and major subphases within the preparatory work are discussed.—*Journal abstract.*

11742. Bjerstedt, Åke. (School of Education, Malmö, Sweden) **System synthesis in instructional programming: The intermediate phases of the program construction process.** *Didakometry*, 1971(May), No. 32, 82 p.—Considers the system synthesis phase, the construction of a preliminary system version, in the building of a self-instructional system. Various aspects of the writing of a preliminary version, e.g., choice of flow model, working out the information component of instructional units, designing response requests, and result indications are discussed.—*Journal abstract.*

11743. Bohac, Joseph J. & Frank, Peter R. (United States International U., San Diego, Calif.) **The effectiveness of the teaching machine as a method of teaching vocabulary and the relationships of personality types to the teaching machine as a method of instruction.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6394.

11744. Boudin, Henry M. (U. Michigan) **The ripple effect in classroom management.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6395.

11745. Brown, Bobby R., Hansen, Duncan N., Thomas, David B., & King, Arthur D. (Florida State U.) **Learner control of automated instruction.** *NAVTRADEVCEEN, Technical Report*, 1970(Aug), No. 68-C-0071-3, 32 p.—Investigated the effects of 3 variations of learner control and 1 instructor control condition: (a) selection of media-device and information load,

(b) selection of repetition by branching, and (c) selection of topic sequence. 15 undergraduate and 40 graduate students served as Ss. By means of the IBM 1500 system, material was presented via (a) CRT instructional terminals with light pen response, (b) typewriter instructional terminals with keyboard response, and (c) a manually operated multiple tape deck player with multiple sets of earphones for individual audio presentations with written responses. Significant pre-post improvement was observed across all groups. However, learner control did not improve performance in comparison to the no learner control group. Data reveal that the no learner control condition was superior on the posttest. The pattern of choices of information level (terse, medium, redundant) which learners made under learner control of presentation device and redundancy level seems to indicate that Ss did choose device redundancy level combinations which tended to optimize the memory load of the device-material combination. Results observed for learner control of sequence suggest that the amount of information presented to guide student decisions in sequencing may be a critical variable. (19 ref.)—*Journal abstract.*

11746. Bruininks, Robert H., Lucker, William G., & Gropper, Robert L. (U. Minnesota) **Psycholinguistic abilities of good and poor reading disadvantaged first-graders.** *Elementary School Journal*, 1970(Apr), Vol. 70(7), 378-386.—Disadvantaged children who had attended Grade 1 in either 1964 or 1965, and had participated in experimental reading and language development projects, served as Ss. 1 group of 171 Ss were taught to read with a series that used the initial teaching alphabet and another group of 160 were taught to read with a series that used traditional orthography. All were finally classified as "good" or "poor" readers. Toward the end of Grade 1, Ss in both reading approaches were given the Illinois Test of Psycholinguistic Abilities, Experimental Edition. The prediction that poor readers would be significantly inferior to good readers on psycholinguistic abilities was partially supported. Findings suggest "the need to incorporate intensive auditory perception and language training into the reading readiness program for disadvantaged 1st-graders who have auditory deficits." (26 ref.)—S. R. Diamond.

11747. Coleman, Richard G. (U. North Carolina, Chapel Hill) **An operant technique for elementary classrooms.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6872.

11748. Froseth, James O. (U. Wisconsin) **Using MAP scores in the instruction of beginning students in instrumental music.** *Journal of Research in Music Education*, 1971(Spring), Vol. 19(1), 98-105.—The Musical Aptitude Profile (MAP) was administered to 190 5th and 6th graders prior to their receiving any instrumental music instruction. Using ratings of tape-recorded performances of etudes at the end of the 1st yr. of instruction as a criterion, it was found that students did significantly better (although the differences were small) when teachers had knowledge of MAP scores than when they did not.—D. Higbee.

11749. Greenberg, Marvin & Huddleston, Don R. (U. Hawaii) **A program for developing aural discrimination of instrumental tone colors using a video-sonic teaching machine.** *Journal of Research in Music Education*, 1971(Spring), Vol. 19(1), 51-61.—Discusses programmed instruction in music and the development

of a program on "the instruments of the orchestra."—D. Higbee.

11750. Hartley, James. (Memorial U., St. John's, Newfoundland, Canada) **Factors affecting the efficiency of learning from programmed instruction.** *AV Communication Review*, 1971(Sum), Vol. 19(2), 133-148.—Reports results of the Factors Affecting the Efficiency of Learning from Programmed Instruction project carried out between March 1967 and September 1970. 3 main areas were investigated: (a) programmed learning in pairs, (b) the teacher and programmed learning, and (c) the effects of pretesting on posttest performance. Methodology, results, and discussion are provided in each area. Summaries of 14 technical papers which grew out of the project are also provided.—D. E. Anderson.

11751. Harvey, William L. (U. Southern California) **A study of the cognitive and affective outcomes of a collegiate science learning game.** *CAI Center Technical Report*, 1970(Nov), No. 17, 147 p.—Examined the effects of playing a science education game on (a) attitudes toward science, (b) general confidence in mastery of science, (c) general achievement in science, and (d) mastery of specific scientific concepts. 78 black teachers enrolled in science education courses were assigned to 2 classes using either the learning game or the traditional lecture-discussion approach. Pretest scores for each group did not differ significantly, but posttest scores revealed significantly superior scores for the experimental group in all areas examined. Stepwise multiple regression analyses for high and low achievement groups indicate that low achievers benefited most from the gaming strategy. The learning game thus reduced the differences in achievement detected in the pretest, while raising the achievement mean score for the entire group. Results suggest that a learning game of this type may be an effective agent in providing a learning environment that fosters growth in the cognitive and affective domains. (54 ref.) *Journal abstract.*

11753. Ives, John M. **A strategy for instructional television research.** *AV Communication Review*, 1971(Sum), Vol. 19(2), 149-160. Discusses the role of closed-circuit TV in the general understanding of the education process. The approach proposed begins with specific programs, identified effects that the program may produce, defines more rigorously the variables that may produce these effects, and subsequently undertakes experimental studies to investigate further the variables and their effects. Techniques based on test item totals and intercorrelations are suggested as a means of building a body of knowledge based on empirical generalizations.—D. E. Anderson.

11754. Jackson, Kenneth M. (U. Washington) **A communication approach to programmed instruction.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6240-6241.

11755. Johnston, James M. & Pennypacker, H. S. (U. Florida) **A behavioral approach to college teaching.** *American Psychologist*, 1971(Mar), Vol. 26(3), 219-244.—Describes a program of research on teaching methods and their results, comparing these techniques with other instructional procedures. The research was conducted from the philosophical and methodological

perspective of an empirical approach to instructional procedures in higher education. The techniques included using skilled students to teach other students, precise specification of curricula, continuous recording and graphing of performance data, individualized definition of performance criteria, and frequent assessment integrated with teaching. The roles of a number of variables critical to the success of such teaching activities are discussed. (25 ref.)—*J. M. Johnston.*

11756. **Kamedula, Eugeniusz. Efektywność nauczania przy pomocy filmu.** [Teaching effectiveness by means of films.] *Prace Wydziału Filozoficzno-Historycznego: Seria Psychologia-Pedagogika*, 1970, No. 17, 297-331.—Studied the effects of films used as educational aids (a) for the mastery of subjects presented, (b) for a better retention of the instruction offered, and (c) for subject matter memorized by low achievers. It was found that the subject presented was mastered better by 14% in lessons with films than in lessons without them. Ss who had 4 or more unsatisfactory marks before memorized 20.8% more information than in conventional classes. The retention of knowledge acquired, after a mo. had elapsed, was 12.6% higher for students taught by audiovisual techniques than for those taught by conventional methods. For low achievers in biology, the difference amounted to 20.3%. In general, all marks of Ss taught by audiovisual methods were much higher than the marks of Ss taught without them. It is emphasized, however, that these results should be regarded just as indicative, as only a few students were involved and this experiment was of short duration. (23 ref.)—*P. von Toal.*

11757. **Leja, Leon. Audiowizualne techniki nauczania: I. Ich efektywność.** [Audiovisual teaching techniques: I. Their effectiveness.] *Prace Wydziału Filozoficzno-Historycznego: Seria Psychologia-Pedagogika*, 1970, No. 17, 269-296.—Studied the effectiveness of audiovisual and semiprogrammed teaching in several public schools, high schools, and vocational schools by specially trained teachers with a teaching experience up to 15 yr. During the experimental lessons, the subject matter was presented verbally, and films were used additionally for further information. The achievements of the students were compared with those of students taught by conventional methods. It was found that in classes using audiovisual teaching the retention was much better than in the control classes. This was proven by the marks earned by the students which were, at an average, 19.3% higher for the students taught by audiovisual methods. The economic aspects of the audiovisual teaching techniques are discussed. In spite of the high initial costs, the introduction of these techniques is believed to be advisable, due to the better teaching effects obtained. (18 ref.)—*P. von Toal.*

11758. **Milan, Mikuláš & Barišová, Margita.** (Pedagogical Research Inst., Bratislava, Czechoslovakia) **K problémů zásadnej zmeny vyučovacieho procesu.** [Fundamental changes in the teaching process.] *Jednotná Škola*, 1970(Nov), Vol. 22(9), 833-849.—Studied the effectiveness of the classical-programming teaching method for the instruction of 2,158 3rd graders from 81 classes in the towns and villages of Slovakia and Moravia. The method was applied 4 hr/wk over 1 school yr. Only 3.2% of the students failed the course, 51% for irregular school attendance. Results of a questionnaire returned by the teachers indicate a highly positive response to the nontraditional method of teaching. 91%

indicated that they would continue to use the combined classical-programming method. (Russian summary)

11759. **Mordant, Gilberte.** (U. Brussels, Belgium) **La méthode Romain et l'éducation des attitudes.** [The Romain method and the education of attitudes.] *Revue Belge de Psychologie et de Pédagogie*, 1970(Jun), Vol. 32(130), 50-62.—Reviews the method developed by S. Romain for the education of aptitudes and attitudes. The student is presented with various problems, objects, and tasks, some of which call for fixed responses, others which permit creativity. These situations are intended to provide illustrations of the student's basic thought processes, operational behaviors, reactions to success or failure, etc. Evidently, there is general agreement that the Romain method seems to be a promising tool for assessing these dimensions of the personality, and assisting the individual to develop them during the formative years within the educational process.—*L. A. Ostlund.*

11760. **O'Reilly, Robert P. & Illenberg, Gregory J.** (New York State Education Dept., Albany) **Relationship of classroom grouping practices to diffusion of students' sociometric choices and diffusion of students' perception of sociometric choice.** *California Journal of Educational Research*, 1971(May), Vol. 22(3), 104-114.—Students in classrooms organized by pupil teams for instruction and students in conventionally structured classrooms were administered a sociometric device designed to measure the extent of social diffusion along the 3 dimensions of liking, school competence, and social power. Results were also analyzed in terms of the graded or nongraded structure of the sample schools. Classrooms organized by pupil teams for instruction were consistently less diffuse in social structure than were the conventionally organized classrooms, both graded and nongraded. This lack of social diffusion is interpreted to be the result of the unique instructional setting of the team learning classroom as opposed to the conventionally structured classroom.—*Journal abstract.*

11761. **Payne, Beryl.** (Boston U.) **Uncovering destructive self criticism: A teaching technique based upon general semantics.** *Educational Opportunity Forum*, 1969(Fal), Vol. 1(4), 85-94.—The work of A. K. Korzybski is cited to indicate the amazing rates of progress in the sciences against the relatively meager advancements in the social studies. It is posited that the vocabulary and language patterns of the latter are absolutistic while in the former they are relativistic. Some of the results of the latter are "either-or," "all-inclusiveness," and "2-value logic" mechanisms of thinking. The relativistic emphasis of science results in thinking characterized by "degrees of truth," "varying degrees of values," "dynamic and flexible conclusions," and "specificity with respect to time and place." Excessive self-criticism can develop an absolutistic perception of one's work to the erosion of creative problem solving. Examples are given by which students can counterbalance the results of excessive, destructive self-criticism.—*A. J. Ter Keurst.*

11762. **Pellegrino, Dominick D.** (Iowa State U.) **The class is a group.** *National Catholic Guidance Conference Journal*, 1971(Spr), Vol. 15(3), 157-162.—Most teachers neglect to apply interpersonal techniques and group dynamics to classroom situations. Consultation techniques and concepts are presented for use by counselors

when interacting with teachers to use their classes as groups.—A. M. Cawley.

11763. Scott, Joseph A. (U. Wisconsin) **The effects on short- and long-term retention and on transfer of two methods of presenting selected geometry concepts.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6413.

11765. Sullivan, Howard J., Okada, Masahito, & Niedermeyer, Fred C. (Southwest Regional Lab. for Educational Research & Development, Inglewood, Calif.) **Learning and transfer under two methods of word-attack instruction.** *American Educational Research Journal*, 1971(Mar), Vol. 8(2), 227-239.—Investigated the effectiveness of 2 methods of word-attack instruction for beginning readers: the single-letter (SL) approach involving letter-by-letter sounding out of new words, and the letter-combination (LC) technique in which children are taught ending VC and VCC combinations as single grapheme-phoneme units. 2 randomly assigned, matched groups of 1st graders ($N = 48$) received a systematic group instruction employing either SL or LC training on a 25 min/day basis for 27 days. The dependent variable was performance on an 80-item posttest assessing Ss ability to read (a) words and letter sounds practiced during training, and (b) transfer words composed of practiced grapheme-phoneme units. Analysis of variance revealed a significant Treatment \times Ability interaction. Low-ability SL-trained Ss scored 15 points higher ($p < .05$) on the posttest than low ability LC Ss, while high ability SL Ss scored 10 points lower than their LC counterparts. The very substantial learning and transfer gains registered by both the SL and LC groups indicated the desirability of frequent and systematic word-attack instruction for beginning readers.—*Journal abstract.*

crewmen judgments than the less effective crew Os.—HumRRO.

11767. Cory, Charles H. (U.S. Naval Personnel & Training Research Lab., San Diego, Calif.) **A comparison of retention of category IVs and non-IVs in fifty-eight navy ratings.** *U.S. Naval Personnel & Training Research Laboratory Report*, 1971(Mar), No. SRR 71-13, 10 p.—Analyzes data based on the men retained from a sample of approximately 19,500 after an average of 9 yr. service in the United States Navy. After categorizing them by mental level within each of the ratings present in the sample, ratings and types of ratings most suitable for Navy Category IV men in terms of long-term retention were determined. Ratings having few or no IVs to which IVs might be suited for assignment were identified. Category IV Ss were found to have been retained at a substantially lower rate and to be present in substantially fewer ratings than Ss in the other mental levels. Despite the overall lower than average rate, for many ratings IVs had rates of retention substantially higher than other mental levels.—*Journal abstract.*

11768. Marcus, Edward E. (Public Personnel Assn., Chicago, Ill.) **What do you mean, "evaluation?"** *Personnel Journal*, 1971(May), Vol. 50(5), 354-358, 411.—Discusses reductionistic models of evaluation, e.g., value determination by mass, extension, assay, and consensus or negotiation, and evaluation as feedback and as a postmortem. Also, discussed are the semantics of evaluation, e.g., evaluation upon completion, at timed intervals and critical junctures, by exception and random sampling, and continuous evaluation.—S. Knapp.

11769. Martin, Roger D. (U. Saskatchewan, Saskatoon, Canada) **Personality correlates of life insurance underwriters.** *Studies in Personnel Psychology*, 1971(Apr), Vol. 3(1), 63-67.—The effectiveness of Gough's Adjective Check List was evaluated as an indicator of potential life underwriter sales success as measured by total sales. 13 Ss from 1 branch of 1 company participated in the study. 2 test groups of those Ss in the upper and lower thirds of the total group in total sales were compared. Significant differences between high- and low-sales groups are claimed on the Defensiveness, Favorable Adjectives Checked, and Self-Control subscales. No significant differences were found between groups on the Self-Confidence, Endurance, and Exhibition subscales. (French abstract)—J. G. Tiedemann.

11770. McFann, Howard H. (HumRRO, Div. No. 3, Monterey, Calif.) **HumRRO research and project 100,000.** *HumRRO Professional Paper*, 1970(Dec), No. 33-70, 4 p.—Presents information on 3 major HumRRO projects concerned with training and performance of men of varying ability levels, as determined by their Armed Forces Qualification Test (AFQT) scores. Ss were approximately 1600 tank crewmen, vehicle mechanics, supply clerks, and cooks. Project I compared on-the-job performance; Project II concentrated on literacy requirements for military jobs; and Project III concerned developing and testing instructional programs appropriate for simultaneously training men of various ability levels. Results indicate that (a) performance in all jobs improved as a function of AFQT level and with increasing time on the job; (b) job knowledge varied as a function of AFQT level and time on job; (c) job experience was more highly related than AFQT level to job performance and information concerning the job; and (d) although the difference between Negroes and

11766. Baldwin, Robert D., Frederickson, Edward W., & Hackerson, Edward C. (HumRRO Div. No. 5, Ft. Bliss, Tex.) **Aircraft recognition performance of crew chiefs with and without forward observers.** *HumRRO Technical Report*, 1970(Aug), No. 70-12, 25 p.—Describes a test of aircraft recognition accuracy and decision speed, comparing the performance of single Os and 4-man crews. Ss were 48 army men of 3 different rank groups. The test used miniaturized simulations of aircraft which were moved at scaled speeds, altitudes, and distances. The validity of the simulation was evaluated, and judged acceptable, by comparing the results of the miniaturized test with results obtained from a previous full-scale test. Comparison of single Os with crews revealed that approximately 50% of Os performed more effectively alone than with a crew, in terms of both accuracy and decision speed. The remaining Os performed either equally well, or more effectively with a crew than alone. These 2 groups of Os were found to prefer different communication sequences. The more effective crew Os tended to be less dependent upon other

Caucasians on the AFQT was about 18 points, they performed equally well on the job sample and job knowledge tests.—*HumRRO*.

VOCATIONAL CHOICE & GUIDANCE

11773. Astin, Helen S. & Myint, Thelma. (University Research Corp., Washington, D.C.) **Career development of young women during the post-high school years.** *Journal of Counseling Psychology*, 1971(Jul), Vol. 18(4), 369-393.—Utilized the Project TALENT Data Bank, to study the career development of 5,387 women during the 5-yr period after high school. Multiple-discriminant analysis was the primary method of analysis utilized. From the predictor variables employed, the post-high school experiences were the best determinants of career outcomes. Educational attainment and marital-familial status best predicted whether women would choose to pursue careers in the sciences, professions, and teaching, or to be housewives and office workers. Of the personal variables, scholastic aptitudes—particularly those related to mathematics—and socioeconomic status, as well as early career choices were the best predictors. Concerning the patterns of stability and change in career plans over time, it is concluded that brighter women either maintain or raise their vocational aspirations whereas the less academically capable women plan on less demanding careers. (38 ref.)—*Journal abstract*.

11775. Greenhaus, Jeffrey H. (New York U.) **Self-esteem and career salience as influences on vocational choice and vocational satisfaction.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6966.

11776. Guinn, Nancy; Tupes, Ernest C., & Alley, William E. **Demographic differences in aptitude test performance.** *USAF AFHRL Technical Report*, 1970(May), No. 70-15, 23 p.—Investigated the joint and independent relationships between aptitude test performance and certain demographic-cultural variables, and the relationships between these variables and the aptitude test factor content. 5 test batteries were administered to groups of approximately 1,900 airmen each. Multiple linear regression analyses indicate that there were significant interaction effects for 6 of the selected tests. The relationship between the cultural variables combined and each aptitude test was significant for all tests. Significant net relationships of race, educational level, and geographical area were found with a majority of tests although wide differences were found among aptitude tests in their sensitivity to demographic-cultural influences. With regard to factor content, race appeared to be related to tests in most factor areas, with its highest relationship in the mechanical area. Education had the highest relationships with verbal, numerical, and reasoning factors and the lowest relationships with the mechanical area. No discernible trend with regard to

factor content was noted for geographical area.—*Journal abstract*.

11777. Hogan, Robert; Hall, Robert, & Blank, Esther. (Johns Hopkins U., Center for Social Organization of Schools) **An extension of the similarity-attraction hypothesis to the study of vocational behavior.** *Center for Social Organization of Schools Report, Johns Hopkins U.*, 1971(Jun), No. 105, 8 p.—Investigated the relationship between similarity of interests and likability, using methods comparable to those used in previous research on the effects of similarity of attitudes or personality on likability. 122 male undergraduates completed an activity preference scale. Ss were then assigned to groups and 4 wk. later rated answer sheets which, in comparison with their own, were (a) in complete agreement, (b) $\frac{1}{2}$ in agreement and $\frac{1}{2}$ in disagreement, and (c) in complete disagreement. A strong positive relationship was found between interest similarity and rated attraction. Implications of these findings for a major theory of vocational behavior are discussed.—*Journal abstract*.

11778. Lau, Alan W. & Abrahams, Norman M. **Reliability and predictive validity of the Navy Vocational Interest Inventory.** *U.S. Naval Personnel & Training Research Laboratory Report*, 1971(Feb), No. SRR 71-16, 18 p.—Presents an investigation of the reliability and validity of the Navy Vocational Interest Inventory (NVII) for a group of men retested 2 yr. after leaving the Navy. Previous findings on NVII test-retest reliability have been based on the responses of reenlistees. Since reenlistment may indicate stability of vocational preferences and nonreenlistment a need for vocational change, an analysis of scale reliability for a sample of nonreenlistees is reported. A 2nd purpose was to obtain evidence for the predictive validity of the NVII. NVII retest scores of 174 Ss who took the NVII in 1964 were compared to scores earned 6 yr. earlier, present civilian occupation, and self-reports of job performance and satisfaction. The relationship between reason for leaving and scale scores was also examined. Results indicate that (a) NVII scores tended to be stable whether based on responses from reenlistees or nonreenlistees; (b) the NVII has acceptable predictive validity; (c) moderate relationships between NVII scores and reports of civilian job satisfaction and performance were found; and (d) low scores were associated with separation from the Navy because of dissatisfaction with rating.—*Journal abstract*.

11779. Miller, Robert E. **Development and standardization of the Air Force Officer Qualifying Test Form K.** *USAF AFHRL Technical Report*, 1970(Jun), No. 70-21, 9 p.—Describes a new form (K) of the Air Force Officer Qualifying Test (AFOQT), standardized for implementation in Fiscal Year 1970. It closely resembles its predecessor in content, organization, and norming strategy, and yields pilot, navigator-technical, officer quality, verbal, and quantitative composite scores. Standardization involved utilization of the Project TALENT battery to relate AFOQT scores to performance of Air Force Academy candidates and 12th grade males in the original Project TALENT national survey. AFOQT Form K extends the practice by which conversion tables are adjusted for the effects of formal education on raw scores. The Form K scoring manual contains 3 sets of conversion tables corresponding to less than 2 yr. of college, 2 or more yr. but not graduation, and graduation from college at the time of testing.

Corrections were made in the adjustment of the pilot composite for educational effects on the basis of operational experience with AFOQT-68 which showed that the adjustment was excessive. A revision of the AFOQT Manual for Interpretation, published simultaneously with AFOQT Form K, contains information not peculiar to any 1 form. The revision includes a more extensive summary of technical data and brief explanation of each technical concept introduced.—*Journal abstract.*

11780. Mullins, Cecil J., Massey, Iris H., & Riederich, Larry D. **Why airmen enlist.** *USAF AFHRL Technical Report*, 1970(Aug), No. 70-29, 32 p.—Administered the Air Force Questionnaire to 41,098 newly enlisted airmen. 1-way distributions were made of all responses, and then 2-way distributional relationships were computed between reasons for enlistment and other selected variables. Educational opportunity was the reason most frequently given for Air Force enlistment, followed by wide choice of assignments, and then opportunity to travel. Reasons for enlistment appear to be associated with various other variables, e.g., indications of S's attitude toward enlistment in the absence of a draft, his career intentions, previous work experience, race, educational level, and mental ability.—*Journal abstract.*

11781. Nuttall, Ronald L. & Fozard, James L. (Boston Coll., Inst. of Human Sciences) **A reexamination of the structure of the General Aptitude Test Battery aptitudes.** *Industrial Gerontology*, 1971(Win), Vol. 8, 1-18.—Examination of age and socioeconomic status of the 12 subtests of the General Aptitude Test Battery indicated that the intelligence factor (G) was composed of subtests which did not respond to these 2 variables. Parallel factor analyses on a sample of 1,146 28-83 yr. old men defined a new, 7-factor structure in which Factor G is replaced by information processing ability (Factor IPA), and Factors P and Q, by perceptual detail discrimination (Factor PDD). Other factors in this new scheme are manual dexterity (MD), pattern analysis capability (PAC), finger dexterity (F), motor coordination (K), and verbal ability (V). "The replacement of the present 9 aptitudes with the new 7... should allow greater stability of aptitudes with older workers." (18 ref.)—A. M. Cawley.

11782. Pratt, Ann B. (U. Minnesota) **Meanings of popular and unpopular occupations on the Strong Vocational Interest Blank for Women.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6317-6318.

11783. Singh, L. C. (National Inst. of Education, New Delhi, India) **Development of a bilingual occupational differential.** *Indian Journal of Psychology*, 1969, Vol. 44(1-4), 71-92.—The occupational differential was developed mainly based upon the procedure used by Osgood, et al., for their semantic differential scale, in 2 Indian languages—Hindi and Kannada. The major steps were: selection of concepts in English, elicitation of Hindi/Kannada translation equivalents, production and selection of scales including determining the qualifier domain and opposite elicitation. 3 more criteria were used for selecting occupational titles. The occupational differential was made up of 12 scales. 4 scales with highest loadings on each of the 3 factors were selected to represent dimensions of efficiency, work morality, and appearance.—B. Roy.

11784. Thomas, James M. (U. Nebraska, Omaha) **Retention of scientists and engineers in the Air**

Force: A modified model for interpreting correlates of career intent. *USAF AFHRL Technical Report*, 1970(Jun), No. 70-27, 29 p.—Identified factors related to career intentions of scientists and engineers in the Air Force and examined assumptions underlying organizational retention research for relevance to Air Force retention studies. A literature review was conducted and a theoretical discussion of typical assumptions in retention research presented. A survey of scientists and engineers (N = 449) was then analyzed, using a modified model based on the theoretical discussion. Results suggest that career-oriented scientists and engineers may have a different need structure than their non-career-oriented counterparts. Needs for managing and applied research characterized the career-oriented scientist, while needs for pure research and scientific achievement characterized the non-career-oriented scientist. Career-oriented officers were generally more optimistic about satisfying important needs while in the Air Force, and preferred a professional-officer to a professional-scientist identity. Correlations between various aspects of active duty experience and career intent suggest that precommitment attitudes should be investigated further. Career-oriented scientists and engineers may start out career-oriented and their active duty experiences sustain that orientation. Non-career-oriented scientists and engineers may perceive active duty experiences as supporting their initial attitudes regarding a military career. This leaves only the initially undecided group to be significantly influenced by the quality of their active duty experiences. (42 ref.)—*Journal abstract.*

11785. Valentine, Lonnie D. & Vitola, Bart M. **Comparison of self-motivated Air Force enlistees with draft-motivated enlistees.** *USAF AFHRL Technical Report*, 1970(Jul), No. 70-26, 18 p.—To understand the impact of a move toward volunteer armed services on the characteristics of Air Force input, 2 groups of basic trainees were defined in terms of their draft vulnerability at the time of enlistment and their stated attitude toward enlistment in the absence of a draft. These groups, identified as self-motivated and draft-motivated enlistees, with 209 and 347 Ss, respectively, were compared on a number of dimensions. From comparative data derived from Ss responses to the Career Attitude Survey and the Airman Biographical Survey, statistically significant differences were found between the 2 groups. Compared with draft-motivated Ss, self-motivated Ss were less well educated, came from a lower socioeconomic background, and performed less adequately on ability tests. They were generally attracted to service by the opportunity to learn a trade and were not firmly committed to a military career at time of initial entry to service. Data also suggest that military service can be made more attractive to draft-motivated Ss by structuring the personnel system to allow the individual more control over his fate.—*Journal abstract.*

SELECTION & PLACEMENT

11786. Curtis, Ervin W. & Alf, Edward F. **Validity, predictive efficiency, and practical significance of selection tests.** *U.S. Naval Personnel & Training Technical Bulletin*, 1970(Aug), No. STB 71-1, 13 p.—Questions the practice of accepting validity coefficients at face value as measures of practical significance. This practice is evaluated by examining each functional relationship between 3 indexes of predictive efficiency— r , r^2 , and E —and 3 measures of practical significance

—the increase of the criterion mean, the expected proportion "satisfactory," and the expected proportion in 10 criterion categories. The validity coefficient, r , is a linear function of the increase of the criterion mean and very nearly a linear function of the other 2 measures of practical significance; r^2 and E are related to these 3 measures in a more curvilinear manner. A table is presented that gives the proportion expected in each of 18 criterion categories as a function of r and the selection ratio.—*Journal abstract.*

11787. Hooke, James F. & Krauss, Herbert H. (Virginia Commonwealth U.) **Personality characteristics of successful police sergeant candidates.** *Journal of Criminal Law, Criminology & Police Science*, 1971(Mar), Vol. 62(1), 104-106.—Data were collected as part of a study of usefulness of objective personality inventories in the selection and promotion of police officers. The following tests were administered to candidates who had successfully passed the oral examination: (a) the MMPI, a widely used personality test designed to assess the presence of severe psychopathology; (b) the Allport-Vernon-Lindzey Study of Values, intended to measure basic value orientation; and (c) the Gough Adjective Check List, a list of adjectives considered useful in determining self-concept. The test material indicates that the successful candidates and their matched controls were psychologically normal. The group of successful candidates, however, seemed better suited for leadership and disciplinary roles than their matched controls. Within the group of successful candidates for sergeant, men who were rated by established sergeants as good police officers were also rated as potentially good sergeants. Conversely, those who were rated as relatively poorer officers were also seen as poorer sergeant material. The psychological tests did not differentiate between the candidates rated as good sergeant material and the group rated as relatively poorer candidates. Many explanations for this seem reasonable.—*R. Gunter.*

11788. Lacey, David W. (Ohio State U.) **Holland's vocational models: A study of work groups and need satisfaction.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6316-6317.

11789. Thomas, Patricia J. **The improvement of selection to Personnelman "A" school.** *U.S. Naval Personnel & Training Research Laboratory Technical Bulletin*, 1970(Oct), No. STB 71-3, 37 p.—Administered tests of intermediate memory ability, the Navy Vocational Interest Inventory (NVII), a peer rating, and an instructor's rating, at 3 Personnelman (PN) "A" schools with a total of 217 students. The final school grade (FSG) of each S was used as a criterion. In addition, the efficacy of the NVII for predicting the performance of rated PNs in the fleet was investigated with 788 Ss. Midway through the testing phase of this research, a major course revision was instituted at the PN schools. The validity coefficients prior to this change were markedly higher than after. A comparison of the test performance of recruit and fleet input to the schools showed that virtually all of the validities were higher for recruit input although the fleet men earned higher FSGs. The NVII key developed to predict the PN supervisor's rating achieved a cross-validated r of .23, as compared with the General Classification Test (GCT) validity of -.02 and the Arithmetic Test (ARI) validity of -.01. It was recommended that: (a) GCT and ARI be retained for recruit classification; (b) ARI be the sole Basic Test

Battery selector for fleet input to the schools; (c) the Ss in this study be followed to determine what effect the curriculum change had upon their on-job performance; and (d) consideration be given to increasing the proportion of fleet men in PN "A" school.—*Journal abstract.*

TRAINING

11790. Blaiwes, Arthur S. & Regan, James J. (Human Factors Lab., Orlando, Fla.) **An integrated approach to the study of learning, retention, and transfer: A key issue in training device research and development.** *NAVTRADEVCE Technical Report*, 1970(Aug), No. IH-178, 48 p.—Summarizes the approach, rationale, and some of the results of an effort being made at the Naval Training Device Center Human Factors Laboratory to acquire information on learning, retention, and transfer which can be applied toward the solution of military training problems. A review of some relevant psychological theories and an analysis of the relevant research literature are included. (181 ref.)—*Journal abstract.*

11791. Dick, Walter; Rivers, LeRoy; King, Arthur D., & Hansen, Duncan N. (Florida State U.) **Development of a model for adaptive training via computer-assisted instruction utilizing regression analysis techniques.** *NAVTRADEVCE Technical Report*, 1970(Jun), No. 68-C-0071-2, 44 p.—Investigated the efficacy of a dynamic decision model for an ongoing learning situation presented via computer-assisted instruction. Ss were 2 groups of 11 enlistees each in the Naval Reserve. In addition to correctness on learning frames within a concept, criterion frames testing the concepts, and correctness of end of unit quiz questions, this study was concerned with such variables as latencies for each of the above measures, and the S's confidence of his response on the criterion and quiz questions. The 1st step involved the investigation of the relationship of these variables with performance on the final examination for the 2-hr course on concepts of Boolean algebra. Based on the results of correlation and regression analysis with the final exam as the dependent measure, the relevant variables were incorporated into the decision model. The adaptive decision model was shown to be effective in identifying Ss who needed remedial instruction. However, the use of the model did not significantly improve performance on a course presenting basic concepts of Boolean algebra when compared with Ss who did not have the benefit of the adaptive model. 11792. Hammell, Thomas J. & Mara, Thomas D. (General Dynamics, Electric Boat Div., Groton, Conn.) **Final report: Application of decision making and team training research to operational training: A translatable technique.** *NAVTRADEVCE Technical Report*, 1970(Apr), No. 68-C-0242-1, 60 p.—Describes a technique developed to translate findings of laboratory decision-making research into a form applicable to the operational ASW/AAW training environment. This technique is composed of 2 categorization schemas—a decision skill taxonomy and a behavioral deficiency taxonomy—through which the experimental tasks studied and resultant findings are translated. Applicability of the translated research findings to operational systems is demonstrated by an analysis of submarine fire control data from training device and real-world exercises. Data

and associated information from the operational analysis are classified and unpublished. Observations indicate that decision making training could be implemented on existing devices, without the need for new hardware. A method of applying the translated findings, used in conjunction with proper training techniques, is offered as the means for implementing decision making training on both new and existing devices. Further operational application and validation are needed to refine these training procedures and demonstrate the applicability to tactical training systems. (3 p. ref.)—*Journal abstract.*

11793. Hansen, Duncan N. & Dick, Walter. (Florida State U.) **Memory factors in computer-controlled maintenance training.** *NAVTRADEVEN Technical Report*, 1969(Aug), No. 68-C-0071-1, 35 p.—Prepared a training course in electronic circuit analysis that utilized concepts from Boolean algebra, logic, and set theory for use in both a CRT and a typewriter terminal oriented computer-controlled training (CCT) system. This course was field tested while investigating the influence of massed vs. distributed schedules of training as they affect memory processes. 26 undergraduate volunteers were Ss. The efficacy of CCT graphic presentations and the benefit of CCT memory aids during training were investigated. Results indicate the feasibility of a CCT electronic circuit analysis course in that it is available on at least 2 different CCT systems. The differentiation of implementation roles into those of author, editor, computer illustrator, and computer coder facilitated the preparation of the course. Memory processes and related criterion performance were facilitated by graphic presentations via CCT which appeared to minimize interference effects and facilitate the memory search and retrieval processes. The availability of CCT memory aids while applying complex concepts and relationships led to improved performance and a 64% savings in response time. Ss having some prior knowledge utilized memory aids more effectively.—*Journal abstract.*

11794. Klier, Sol & Gage, Howard. (Grumman Aerospace Corp., Bethpage, N.Y.) **Motion factors in flight simulation.** *NAVTRADEVEN Technical Report*, 1970(Dec), No. 68-C-0007-1, 39 p.—Investigated the effect of different simulator motion conditions on pilot performance, intended to explore the cueing function of simulator motion. 5 pilots with differing degrees of experience performed a simulated air-to-air gunnery task under 4 conditions of motion where the frequency components of such motion inputs were limited to 0 (no motion), 0-1, 0-2.5, and 0-3.5 Hz., respectively. These conditions were hypothesized to interact differentially with concomitant visual motion cues. Results of performance accuracy (e.g., percent time-on-target) indicate a tendency for the order of conditions from best to worst to be 0-2.5, 0-1, 0-3.5, and 0 Hz. However, the treatment effects did not meet the predetermined level of statistical significance. Simulator motion produced better accuracy performance than no motion. There was a significant learning or practice effect as a result of continued exposure to the task. Other performance parameters showed no systematic differences as a function of experimental condition. These variables may have been affected by "noise" in the response of the motion platform which tended to mitigate differences among the experimental conditions. In general, results confirm indications in previous studies that simulator motion need not be a faithful reproduction of real-life motion to provide essential motion cues.—*Journal abstract.*

11795. Livingston, Samuel A. (Johns Hopkins U., Center for Social Organization of Schools) **Two types of learning in a business simulation.** *Center for Social Organization of Schools Report*, Johns Hopkins U., 1971(Jun), No. 104, 12 p.—Randomly assigned 28 male high school students to (a) an experimental group which participated in a business simulation game for 5 hr., and (b) a control group which received no treatment. All Ss took tests designed to measure their knowledge of business facts and concepts and their ability to evaluate business decisions (Business Operations Quiz and Situation Test). The simulation group outperformed the control group on both tests, but the difference approached statistical significance only for the test of facts and concepts.—*Journal abstract.*

11796. Martinez, Pete. (U. Maryland) **An experimental analysis of perceptual direction as a factor in learning a psychomotor task.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6377.

11797. Matheny, W. G., Lowes, A. L., Baker, G., & Bynum, J. A. (Life Sciences, Inc., Ft. Worth, Tex.) **An investigation of visual, aural, motion and control movement cues.** *NAVTRADEVEN Technical Report*, 1971(Apr), No. 69-C-0304-1, 100 p.—Examined the means by which multisensory cues can be simulated and effectively used in the training of pilots. An analytical basis and cue taxonomy were developed and cues postulated on the basis of information gained from the outside visual world, sounds generated by the aircraft, and aircraft motion and control movements. Description and measurement of the physical characteristics of the postulated cues were emphasized. Hypotheses were developed based upon the effects of postulated cues as they function independently and interact with cues in other modalities. (104 ref.)—*Journal abstract.*

11798. Miller, Elmo E. (HumRRO, Div. No. 5, Ft. Bliss, Tex.) **Prompting and guessing in tank identification.** *HumRRO Technical Report*, 1970(Dec), No. 70-21, 18 p.—Describes an experimental program designed to explore aspects of developing effective general methods for learning to identify and name objects. 3 general methods of reducing excessive guessing were evaluated (4 × 2 × 3 factorial design, 96 basic army trainees), in terms of time to reach mastery. The comparisons were: (a) 4 different schedules of prompting; (b) instructions discouraging guessing and absence of such instructions; and (c) an introduction pointing out the distinguishing features of the tanks being studied, an introduction naming the tanks on audio, and no introduction. None of the treatments had a statistically significant effect upon time required to reach mastery, although discouraging guessing did result in less time spent guessing and a smaller percentage of guessing on test items. (24 ref.)—*HumRRO.*

11799. Plante, L. & Stewart, C. P. **The prediction of keypunch training success.** *Studies in Personnel Psychology*, 1971(Apr), Vol. 3(1), 77-86.—4 variables—the Mental Ability Test, a typing test, age, and an aptitude test consisting of name-checking and number substitution subtests—were correlated with a Keypunch Skill Test to identify the best test or combination of tests as predictors of keypunch success. Ss were 740 keypunch trainees. Although all 4 variables correlated significantly at the .01 level with scores on the Keypunch Skill Test, it is concluded that the Mental Ability Test does not contribute a sufficiently important positive prediction to warrant its further use in the selection of keypunch

trainees. The combination of tools giving the best prediction of training success was that including aptitude test total scores, gross typing speed, and age (multiple $R = +.6465$). (French abstract)—J. G. Tiedemann.

11800. Puig, Joseph A. (Human Factors Lab., Orlando, Fla.) **Motion in flight training: A human factors view.** NAVTRADEVEN Technical Report, 1970(Oct), No. IH-177, 57 p.—Reports an in-house study reviewing the status of simulation technology as applied to training, with emphasis on human factors problems encountered in visual and motion simulation. The effects of incorporating motion in ground-based visual simulators is considered with respect to its influence on training and its role on a possible inhibitor of simulator sickness. The position of the Human Factors Laboratory is expressed on several aspects of simulation related to training technology. (66 ref.)—*Journal abstract.*

11801. Ruocco, J., Klier, S., Gage, H., & Vitale, P. **Design factors in environmental simulation.** NAVTRADEVEN Technical Report, 1970(Dec), No. 66-C-0019-1, 70 p.—Investigated the relationships between various aspects of cockpit motion and pilot performance. The task of landing approach was carried out by 10 experienced pilots in the simulator and in the aircraft. Results indicate that: (a) both experimental apparatus and design variables operated to limit the conclusions to be drawn; (b) comparisons between pilot performance in the simulator and the actual aircraft were possible but not meaningfully related to the experimental questions; and (c) with respect to the test of the relationships between pilot performance and variations in the motion characteristics, meaningful conclusions were not possible because of experimental apparatus and design difficulties. The study provided valuable knowledge for definition and quantification of simulator motion which should prove useful in future investigations of the effect of simulator motion on performance and transfer of training.—*Journal abstract.*

11802. Weingarten, Kenneth; Hungerland, Jacklyn; Brennan, Mark, & Alfred, Brent. **The development of a low-cost performance-oriented training model.** HumRRO Professional Paper, 1970(Dec), No. 32-70, 8 p.—Describes (a) a training model featuring peer instruction in a functional job-simulated context; and (b) the objectives and practical constraints that led to its development.—*HumRRO.*

11803. Weingarten, Kenneth; Hungerland, Jacklyn; Brennan, Mark, & Alfred, Brent. **The APSTRAT instructional model.** HumRRO Professional Paper, 1971(May), No. 6-71, 9 p.—Describes a low-cost instructional model suitable for multiaptitude training populations, stressing (a) individualized, self-paced learning in an operational functional context, and (b) utilization of peer instruction. The model, developed in pilot studies involving the Army's Field Wireman Course, is designed as a generalizable instructional system.—*HumRRO.*

TASK & WORK ANALYSIS

11804. Bergström, Bengt & Arnberg, Peter. (Inst. of Military Psychology, Stockholm, Sweden) **Heart rate and performance in manual missile guidance.** Perceptual & Motor Skills, 1971(Apr), Vol. 32(2), 352-354.—Earlier stress studies under laboratory conditions show that heart rates from 100-110 bpm are associated with significant decrements in missile-tracking per-

formance. Data from real missile tracking by 8 operators with no stress deliberately induced indicate, however, that performance is unaffected up to 135 bpm, and only moderately affected in the 135-170 bpm region. The disagreement between the 2 sets of results highlights the difficulties in generalizing from stress experiments.—*Journal abstract.*

11805. Borg, Gunnar; Bratfisch, Oswald, & Dornić, Stanislav. (U. Stockholm) **On perceived difficulty.** Reports from the Institute of Applied Psychology, U. Stockholm, 1970, No. 10, 13 p.—Describes the development and meaning of the concept of "perceived difficulty" emphasizing the differences between physical and mental work. Results of experiments with 30 20-30 yr. old trainee women teachers are presented. Analysis of the concept of perceived difficulty and the problems and possibilities of measurement are also presented. The concept of perceived difficulty is dealt with in a differential connection and a model for interindividual comparisons is suggested. It is emphasized that a systematic investigation of perceived difficulty is both possible and useful, and that it yields an opportunity to improve and facilitate the construction of psychological tests.—*Journal abstract.*

11806. Borg, Gunnar; Edgren, Bengt, & Marklund, Gustaf. (U. Stockholm) **A flexible work test with a feedback system guiding the test course.** Reports from the Institute of Applied Psychology, U. Stockholm, 1970, No. 8, 20 p.—Presents a flexible work test which gives a behavioral measurement of physical working capacity in the form of the highest work load on which an S is able to work for 4 min. The test is designed to have all Ss work for the same duration on a series of subjectively equal work loads. For practical and administrative reasons the test should be kept short—about 10 min.—and the initial work load fairly high. To meet this requirement the test is divided into 2 main parts (initial and final work periods) and a feedback system based on physiological and psychological stress indicators is constructed to guide the test course. The flexible work test was applied to a bicycle ergometer with a group of 25 soldiers. Results indicate the possibility of designing a test according to the principles proposed. (25 ref.)—*Journal abstract.*

11807. Borg, Gunnar; Edström, Carl G., & Marklund, Gustaf. (U. Stockholm) **A new method to determine the exponent for perceived force in physical work.** Reports from the Institute of Applied Psychology, U. Stockholm, 1970, No. 4, 6 p.—Applied a new method for psychophysical scaling in an experiment concerning perceived force (perceived pedal resistance) for work on a bicycle ergometer with an electronic braking system. The stimulus intensity was varied as a function of time and the S's task was to report how he perceived the variation. Ss were 20 20-25 yr. old male students. The method with stimulus variation as a function of time was combined with a classical psychophysical method for threshold determinations. When the work load increased as the .4 or decreased as the .6 power of time, the variation was judged to be linear. The exponents of the corresponding psychophysical functions are 2.3 and 1.6 (15 ref.)—*Journal abstract.*

11808. Ettema, J. H. & Zielhuis, R. L. (U. Amsterdam, Coronel Lab. of Occupational Hygiene, Netherlands) **Physiological parameters of mental load.** Ergonomics, 1971(Jan), Vol. 14(1), 137-144.—Discusses the essential aspects of the terms "load" and "capacity,"

as used in work physiology, as being valid for mental load in the following ways: (a) the question of the physiological costs (biological consequences) of a given performance; (b) external load to be measured in units of performance/time (signals/time, choices/time); (c) capacity, dependent on time of endurance; (d) physiological changes correlating with load; and (e) pathological symptoms due to extreme load. An experiment with 24 20-25 yr. old students is discussed, where a simple binary choice task is used with several frequencies of signals to be answered, thus providing different loads. Systematic changes were found in heart frequency, sinus arrhythmia, systolic and diastolic blood pressure, rate of respiration, etc. It is suggested that these changes are due to a simultaneous rise in sympathetic and in vagal tone. (French & German summaries)—*Journal abstract*.

11809. Hamar, N. & Novák, E. (National Inst. of Labour Health, Budapest, Hungary) **A telemetric method for assessing mental performance.** *Ergonomics*, 1971(Jan), Vol. 14(1), 129-135.—In a previous paper a telemetric accelerograph was described which had proved to be a good instrument for assessing mental performance under industrial working conditions, if the work was characterized by periodically repeated stereotyped movements. Since then the instrument has been developed and comprises perceptive FM transmitting sets, attached to the right and left hand like wristwatches, 2 1-channel FM receivers, aerials, and a recorder. Each receiver is mounted with a part for filtering high-frequency components at various levels. An analysis of the accelerogram from viewpoints of time and structure seems to be appropriate for assessing changes in mental performance during shift work. (French & German summaries)—*Journal abstract*.

11810. Kogi, K. & Saito, Y. (Railway Labour Science Research Inst., Tokyo, Japan) **A factor-analytic study of phase discrimination in mental fatigue.** *Ergonomics*, 1971(Jan), Vol. 14(1), 119-127.—Attempted to discriminate phases in the course of diurnal variation of cortical functions for 8 operators in a train control center. Critical flicker fusion frequency was measured at different periods of a 24-hr shift. Correlation coefficients among periods were computed and 3 underlying factors were extracted. In accordance with these, the shift periods were classified into the morning-rise phase, the intermediate phase, night-and-early-morning phase, and after-overnight-vigil phase. The last phase, although in the morning hours, did not show the features of the 1st phase, but was characterized by markedly different factors as compared with the early morning. Distribution of observed fusion frequencies was not normal in the phases of night or intermediate factors. Similar factors and phases could be demonstrated also for choice RT. It is concluded that phase discrimination of cortical functions by means of factor analysis would be of use for detecting the overfatigued conditions in operators. (French & German summaries)—*Journal abstract*.

11811. Matsui, K. & Sakamoto, H. (Mie Prefectural U., Medical School, Tsu, Japan) **The understanding of complaints in a noisy workshop.** *Ergonomics*, 1971(Jan), Vol. 14(1), 95-100.

11812. Ohtani, A. (Industrial Products Research Inst., Tokyo, Japan) **An analysis of eye movements during a visual task.** *Ergonomics*, 1971(Jan), Vol. 14(1), 167-174.—Describes 3 experiments, with approximately 18 normal-sighted adults, in which the distributions of the interval of saccadic movements were analyzed during

different visual situations. These distributions were composed of 3 kinds of movement which have different properties: involuntary, voluntary, and fixation. Involuntary movements occurred when an S ran his eyes along a line, or when he searched some targets on an object. Also, corrective movements to a fixation point were considered as involuntary. The interval of these movements was less than 270 msec. When the S voluntarily moved his eyes among targets in succession, the intervals were distributed from about 270-500 msec. In the case of more than about 500 msec, the S gazed at a target carefully, or he was not required to see any special object. From these results, a side view of a visual task may be inferred from an analysis of the interval of saccadic movements. A criterion for the estimation of the load of a paced visual task, e.g., an inspection task on a conveyor belt, may be proposed. (French & German summaries)—*Journal abstract*.

11813. Takakuwa, E. (Hokkaido U., Medical School, Sapporo, Japan) **Maintaining concentration (TAF) as a measure of mental stress.** *Ergonomics*, 1971(Jan), Vol. 14(1), 145-158.—Studied fatigue evaluation using the TAF test, which has been devised as a new quantitative fatigue test based on the function of concentration maintenance. The average level of the TAF curve and its standard deviation were compared for pre- and postwork values among different groups statistically. In studying qualitative or psychological aspects, it is generally accepted that stress stimuli bring about certain neurophysiological changes. The mecholyl test is recognized as a reliable means of showing the strength of homeostatic defense in the hypothalamus. However, compared to the dangers of the mecholyl test, the Cold Pressure Test (CPT) swing degree may safely be used to identify the qualitative nature of the stress. It is concluded that fatigue can be dealt with quantitatively by the TAF test and qualitatively by the CPT swing degree. (French & German summaries)—*Journal abstract*.

11814. Yoshitake, H. (Inst. for Science of Labour, Tokyo, Japan) **Relations between the symptoms and the feeling of fatigue.** *Ergonomics*, 1971(Jan), Vol. 14(1), 175-186.—Assessed the work load of 121 bank clerks and 49 broadcasting workers who rated the degree of their feelings of fatigue using a 9-point scale. Results were investigated in relation to a subjective symptoms test of fatigue. Results show (a) a high correlation between the frequency of complaints of fatigue and the feeling of fatigue; and (b) the amount of fatigue differed for the type of symptom. It is presumed that some change in the quality of the complaints of symptoms happens. (French & German summaries)—*Journal abstract*.

PERFORMANCE & JOB SATISFACTION

11815. Arvey, Richard D. (U. Minnesota) **An experimental investigation of the effects of two kinds of expectancies on the performance of a laboratory task.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6313.

11816. Colquhoun, W. P. (Medical Research Council, Applied Psychology Unit, Cambridge, England) **Circadian rhythms, mental efficiency and shift work.** *Ergonomics*, 1970(Sep), Vol. 13(5), 558-560.—Discusses the "circadian" or "24-hr" rhythms in human per-

formance and considers the possibility of reducing their effects on work efficiency by manipulations of duty schedules. It is noted that these "time of day" effects have been studied experimentally in the laboratory. Waking day and round-the-clock studies are briefly reviewed and compared. In 1 of these, it is noted that mental efficiency follows the body temperature rhythm whether or not this rhythm is altered as a result of new sleep-waking routines imposed by working at unusual hours. (22 ref.)—P. McMillan.

11817. Coyle, Harold S. & Gorman, Charles D. (U.S. Air Force Academy) **The utility of OER word pictures as discriminators.** *USAF AFHRL Technical Report*, 1970(Jul), No. 70-23, 8 p.—Determined whether the word picture portion of the Officer Effectiveness Report can be used to discriminate performance. From a sample of 200 1st lieutenant effectiveness reports, 4 comparable sets of 10 reports were created. Rank order criteria were established on each set by 4 groups of 5 judges (Js), all experienced with the rating system. After establishing an actual rank order within each set of 10 ratings, the word descriptions alone were given to 4 groups of 10 Js for rank ordering. Within each set of word pictures, average Spearman-rho correlations were computed for each group of 10 Js to assess inter-J reliability. Rank order statistics were also computed for differing numbers of Js from the 10 from each group to assess whether optimum reliability would occur with fewer than 10 Js. Finally, a composite rank order for each set was computed by averaging the rankings across each word picture. The composite rank orders were correlated with the actual criteria ordering. Results indicate that the rank order correlations across each set of word pictures were below statistical significance. No improvement in inter-J reliability was found with any random combination of fewer than 10 Js. The composite orders did not correlate significantly with the actual rank orders. A displacement effect was noted in that Ss who had received high numerical ratings tended to be ranked lower by Js than they actually ranked. The question is raised as to whether word descriptions can be used as performance discriminators.—*Journal abstract*.

11818. Day, Gerald J. (Indiana U.) **The behavioral effects of wage inequity in work groups.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6965-6966.

11819. Engel, John D. (HumRRO Div. No. 2, Ft. Knox, Ky.) **Development of a work sample criterion for general vehicle mechanic.** *HumRRO Technical Report*, 1970(Jul), No. 70-11, 27 p.—Describes a work sample criterion test for general vehicle repairman. Military Occupational Specialty 63C30 and 63C40. Test items covered 3 task categories: troubleshooting, corrective action, and preventive maintenance. 38 organizational mechanics were tested. Data were also collected on the quality of performance, e.g., use of good procedures, test equipment, etc. The study indicates that (a) the test appears to have a high degree of reliability ($r = .82$); (b) on the average, 60% of the test exercises were successfully completed by Ss; (c) there was a moderate relationship between performance and length of experience; and (d) there were indications of unfamiliarity with technical publications, and a lack of skill in the use of special tools and equipment.—*HumRRO*.

11820. Engel, John D. & Rehder, Robert J. (HumRRO Div. No. 2, Ft. Knox, Ky.) **A comparison of correlated-job and work-sample measures for gen-**

eral vehicle repairman. *HumRRO Technical Report*, 1970(Oct), No. 70-16, 24 p.—Compared 2 correlated-job measures with the work-sample criterion developed for the general vehicle repairman in earlier HumRRO research. 30 organizational mechanics who had been Ss in the earlier study were given paper-and-pencil tests for their military occupational specialty. Later they were given the Metropolitan Achievement Test to determine the relation between reading level and performance of the written and work-sample tests. 3 peer ratings were obtained for each S. Statistical analysis was performed to compare the validity and reliability of these 2 measures with the work-sample criterion. Data suggest that (a) while the present methods of evaluation for the journeyman level general vehicle repairman are relatively reliable, they are inadequate for measuring what a mechanic does on the job; and (b) the work-sample criterion is not a reasonable evaluation alternative because of prohibitive administrative and cost factors when used for thousands of enlisted men.—*HumRRO*.

11821. Evans, Martin G. (U. Toronto, Ontario, Canada) **Herzberg's two factor theory: One more test.** *Studies in Personnel Psychology*, 1971(Apr), Vol. 3(1), 45-49.—Personality differences are presumed to account for people relating the good aspects of their job to its intrinsic aspects (responsibility, achievement) and the poor aspects of their job to its extrinsic aspects (policy, supervision, co-workers). This study investigated the impact of an external (chance, luck, etc.) vs. an internal (self-determination) orientation upon responses to Herzberg-type questions as to what contributed to feeling good or bad about the job. 3 hypotheses were tested: (a) internals will give more intrinsic responses; (b) internals will give balanced responses to good and bad job sequences; and (c) externals will give unbalanced responses. Data on 28 Canadian college Ss from a nonwork population did not support any hypothesis, although results tended in the direction of Hypotheses b and c. (French abstract)—J. G. Tiedemann.

11822. Hagihara, Hiroko; Aramaki, Sadahito; Ito, Tomohiko, & Nagasawa, Yuko. (Aeromedical Lab., Tokyo, Japan) [Experimental study of "two-men effect" on performance: I.] *Reports of Aeromedical Laboratory, Japan*, 1969(Jun), Vol. 10(1), 24-30.—Describes 3 experiments which attempted to find out the difference in performance between 1 man and 2 men. Studies were made to (a) find the difference of effect between 1 man and 2 men regarding the kind of task; (b) compare side-by-side arrangement with tandem by means of 2 men effect; and (c) analyze 2 men effect modified to difficulty in tasks. Main results were: (a) 2-men become effective in target finding and monitoring tasks but are not effective on mental tasks. (b) Side-by-side arrangement with 2 men is more effective than tandem; but it should not be overlooked that difference in arrangement gives a different situation to communication. (c) Performance of 2 men becomes more effective as task becomes difficult. And (d) an effective pair consisted of members of main operator with high score and co-operator with low score, and 2 operators with high score.—*English abstract*.

11826. Hoggatt, Ralph S. & Hazel, Joe T. **Reliability of Individual versus group job pay ratings.** *USAF AFHRL Technical Report*, 1970(May), No. 70-10, 18 p.—Investigated 2 approaches for obtaining job ratings to determine which procedure provided the most stable ratings, given a constant number of raters. Specifically, it compared reliability estimates determined by averaging across individually obtained job ratings obtained from individuals and from groups or panels of raters, 450 basic airman rated 100 brief job descriptions under 3 conditions: (a) individually, (b) in a 3-man panel, and (c) in a 5-man panel. Analyses reveal that estimates of mean reliability were larger for individually obtained ratings than for 3- or 5-man panel ratings. There was also a trend for mean rating time to increase with an increase in panel size. Findings tend to support the procedure of averaging across individual ratings, rather than the use of ratings from panels, in order to obtain more stable results. In terms of reliability, time required, and number of raters, the individual approach appears more economical and efficient than the board or panel procedure.—*Journal abstract*.

11827. Jain, Harish C. (McMaster U., Hamilton, Ontario, Canada) **Supervisory communication effectiveness and performance in two urban hospitals.** *Personnel Journal*, 1971(May), Vol. 50(5), 392-395.—The relationship between supervisory communication effectiveness and performance as rated by employees is affirmed. Samples consisted of 122 and 90 employees, respectively, interviewed in 2 hospitals. Other research indicates that supervisors' communication behavior is important to subordinate workers' morale and performance and to patient recovery rates. Further research is urged and appropriate techniques are discussed.—*P. L. Crawford*.

11828. Johnson, Ronald D. (Indiana U., Graduate School of Business) **An investigation of the interaction effects of ability and motivational variables on task performance.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6967-6968.

11829. Kakimoto, Yukiko; Kuroda, Isao, & Kurihara, Yoshinori. (Aeromedical Lab., Tokyo, Japan) [Relationships between flying safety and human factors from job-satisfaction in JASDF: III.] *Reports of Aeromedical Laboratory, Japan*, 1969(Jun), Vol. 10(1), 31-47.—Analyzed the following problems through a questionnaire consisting of 3 categories and 13 items: working environment, human relations, and work itself. The analyses described were done as a function of career fields, rank orders, age, service yr., educational background, total flying hr., and types of aircrafts. 8 major results were found. Maintenance groups indicate the highest rates of dissatisfaction while pilot groups had the lowest rates. The pilot group of the air transport wing indicates the highest rates of dissatisfaction while the training groups generally indicate low rates. The housing item is the highest rated among the areas of dissatisfaction; the 2nd and 3rd are promotion and pay in the maintenance, administrative, and personnel groups, but in pilot groups "working time" and "supervisor" items are given as 2nd and 3rd. Rates of dissatisfaction are low

in high rank groups, but high in low rank groups; in pilot groups, however, the rates are low even in low rank orders. The more age and service yr. increase, the lower the rates of dissatisfaction, except with young pilot groups (under 30 yr. old). Concerning educational backgrounds, rates of dissatisfaction are the lowest in the Defense Academy group, the most difference being in areas of promotion and pay. Concerning total flying hr., rates of dissatisfaction increase till 3000 hr., then decrease. High rates of dissatisfaction are indicated in the pilot group assigned C-46.—*English abstract*.

11830. Lane, Irving M. (Michigan State U.) **Behavioral strategies in wage distribution.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6968.

11831. Martin, Maurice A. **A study of the concurrent validity of the Computer Programmer Aptitude Battery.** *Studies in Personnel Psychology*, 1971(Apr), Vol. 3(1), 69-76.—The Computer Programmer Aptitude Battery (CPAB), which was designed as a selection instrument, was hypothesized to discriminate among experienced programmers on the basis of job efficiency. Ss were 67 civilian and 87 military employees in an agency of the Canadian Forces grouped as beginning and working level, and working and/or supervisory level. Variables investigated included age, years of education, months of experience, months on the job, months under rater's supervision, source of qualification, CPAB total, and job performance rating average. 35 of 112 correlations were significant. The CPAB predicted rated job efficiency for both military subsamples, but not for either civilian subsample.—*J. G. Tiedemann*.

11832. Mukherjee, Bishwa N. (York U., Downsview, Ontario, Canada) **Interrelationships among measures of job satisfaction and job involvement.** *Indian Journal of Psychology*, 1969, Vol. 44(1-4), 21-32.—Attempted to determine the relationship between an overall measure of job satisfaction such as the Brayfield-Rothe scale and the composite score on a multifaceted job satisfaction questionnaire such as Mukherjee's Job Attitude Inventory, Friedlander's Job Satisfaction Questionnaire, etc. The results clearly indicate that the relationship between the above 2 variables, although positive, is not so strong as has been claimed by other investigators, e.g., Blai, Ewen, and Evans. Since the working conditions in the mills under study are known to be quite satisfactory and the workers feel either neutral or satisfied, the reported findings support in certain ways the 2-factor theory of Herzberg and others. (21 ref.)—*B Roy*.

11833. Prasannarao, B. (Psychological Research Ministry, New Delhi, India) **Morale: A review of researches.** *Indian Psychological Review*, 1969(Jul), Vol. 6(1), 37-44.—Reviews research studies on morale from 1957-1968. Summaries and discussions of findings are arranged under 5 major headings: definition, measures, instruments, reliability and validity measures, and methodology. The need for clear conceptualization of morale and use of experimental methodology for understanding the determinants of morale are stressed. (69 ref.)—*K. C. Panda*.

11834. Ruh, Robert A. (Michigan State U.) **Ego need gratification, extra-work socialization, and attitudes toward the job.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6969.

11835. Stary, Dinko. (Workers U. "Moša Pijade," Zagreb, Yugoslavia) **Mogu li članovi radne grupe biti uzajamno isto toliko dobri ocjenjivači profesionalne**

uspešnosti kao i rukovodioci. [Reciprocal ratings of work efficiency of coworkers and ratings obtained from supervisors.] *Revija za Psihologiju*, 1970, Vol. 1(2), 3-12.—Investigations conducted with 6 large groups of workers have shown that mutual ratings of co-workers and ratings obtained from supervisors about work efficiency are significantly correlated. On the basis of this, it is concluded that mutual ratings of co-workers can be interpreted with the same confidence as ratings obtained from supervisors. (34 ref.)—*English abstract*.

11836. Vineberg, Robert & Taylor, Elaine N. (HumRRO, Div. No. 3, Monterey, Calif.) **Performance in four jobs: The role of mental ability and experience.** *HumRRO Professional Paper*, 1970(Dec), No. 31-70, 14 p.—Presents data from research on job performance of men at different ability levels. Performance was tested for approximately 780 Ss in 4 jobs; armor crewman, vehicle repairman, supply specialist, and cook, of various Armed Forces Qualification Test levels over specified periods of time. Results indicate that (a) high aptitude Ss outperformed low aptitude Ss in each behavior category; (b) the level of performance decreased for lows and highs alike as complexity increased; (c) decrements in performance increased in a positive manner at each successive level of complexity; and (d) the overall effect in named tasks was a decreasing difference between lows and highs as complexity increased; and on unnamed tasks, differences grew wider with complexity.—*HumRRO*.

11837. Waters, L. K. & Roach, Darrell. (Ohio U.) **Comparison of unweighted and importance-weighted job satisfaction measures for three samples of female office workers.** *Psychological Reports*, 1971(Jun), Vol. 28(3), 779-782.—Correlated multiplicative importance-weighted and unweighted composites of job-satisfaction components with separate measures of over-all job attitudes and a termination criterion. Ss were 167, 311, and 160 female office workers. In no case did the use of weighting for importance result in higher correlations with criteria than the use of raw score unit weights.—*Journal abstract*.

11838. Wilkins, Walter L. **Attitudes and values as predictors of military performance.** *USN Medical Neuropsychiatric Research Unit Report*, 1967, No. 67-6, 276-282.—Reports outcomes of the study of attitudes of Marines in basic training as related to later ratings of military adaptation. Results indicate that a Marine Corps recruit's judgment of the Corps goes up during recruit training. Attitude items related to the rise in opinion are the recruit's appreciation for the training instruction, the discipline enforced, and the mutual respect shown by the officers and men. It is concluded that via such an atmosphere, a majority of young men undergo a "dramatic, although not necessarily permanent, reformulation of life goals and values."—P. Hertzberg.

MANAGEMENT & ORGANIZATION

11839. Jones, Kenneth V. (U. Missouri) **Role conflict: Perception and experience.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6314-6315.

11840. Karmel, Barbara M. (Purdue U.) **The influence of mediating variables on member satisfaction and effectiveness in group decision making.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6315-6316.

11841. Klimoski, Richard J. (Purdue U.) **Intragroup forces and intergroup conflict resolution.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6316.

11842. Maire, F. & Rousson, M. **Le questionnaire de R. Likert et son application à la gestion d'entreprise.** [R. Likert's questionnaire and its application to the administration of a business enterprise.] *Revue de Psychologie Appliquée*, 1970, Vol. 20(4), 213-230.—Presents a factorial analysis of a French-language version of Likert's questionnaire for measuring communication skills, decision-making processes, and 4 lesser management skills. Analysis of the original test resulted in its reduction by half. The possibilities of using the scale for comparisons between and within organizations are discussed.—K. J. Hartman.

11843. Mulder, Mauk; Ritsema van Eck, Jan R., & de Jong, Rendel D. (Netherlands School of Economics, Foundation for Business Science, Rotterdam) **An organization in crisis and non-crisis situations.** *Human Relations*, 1971(Feb), Vol. 24(1), 19-41.—Studied leadership patterns in a Royal Navy flotilla on active duty. A distinction was drawn between crisis and noncrisis situations. "From comparison of means, correlational and factor analysis, it may be concluded that at least 1 '3rd factor' manifests itself. Besides a 'good chap-leader' factor, including social-emotional-orientation as well as Other's referent power, an identification relationship of Person with Other, and a salient leadership factor, including task-orientation of Other, it was possible to identify: A 'potentially-effective power in organization' factor, including Other's power-upward (theoretically crucial for the link between subsystem and total system). This factor has also a content of power in crisis. A 'powerful self-confident leadership' factor, to which especially the individual prominence contributes. 'Expert power,' which contributes to the content of the last mentioned 2 factors, or is identifiable as a separate factor." The Other's power-upward and individual prominence is especially connected with crisis situations, while noncrisis situations seem more related to mild person-leader relationship. (36 ref.)—W. W. Meissner.

11844. Penzer, W. N. **Managing motivated employees.** *Personnel Journal*, 1971(May), Vol. 50(5), 367-371.—IBM, Armonk, N.Y.—While job development offers insights and opportunities in the motivational area, it also suggests organizational changes and adaptation. Its successful application implies a major restructuring of the management systems of an organization.—P. L. Crawford.

11845. Price, Karl F. (U. Pennsylvania) **A study of role conflict in the relationship between the art museum director and his board of trustees.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6318.

11846. Richardson, Roy. (U. Minnesota) **An empirical study of fair pay perceptions and time span of discretion.** *Dissertation Abstracts International*, 1971(Apr), Vol. 31(10-B), 6318-6319.

11847. Smoley, M. J. & Slivinski, L. W. **Discriminant analysis of the Self Descriptive Inventory for middle managers and first level supervisors.** *Studies in Personnel Psychology*, 1971(Apr), Vol. 3(1), 33-44.—The Self Descriptive Inventory (SDI) was administered to 244 middle managers and 92 1st-level supervisors in the Canadian Federal Public Service to test the hypothesis that persons filling middle management and 1st-level supervisor positions possess different personal charac-

teristics. Of the SDI's 11 test traits, middle managers demonstrated significantly more Supervisory Ability, Intelligence, Initiative, Self-assurance, Achievement Motivation, and Need for Self-actualization ($p < .001$). 1st-level supervisors demonstrated significantly more Working Class Affinity ($p < .001$) and Need for Job Security ($p < .05$). No significant difference between groups was obtained on Decisiveness, Need for Power, or Need for High Financial Reward. A comparison of the SDI scores of Canadian and American middle managers indicated Canadians demonstrated significantly more Intelligence, Initiative, and Self-assurance; Americans demonstrated significantly more Decisiveness and Working Class Affinity; while no significant difference was found for Supervisory Ability, Achievement Motivation, Need for Self-actualization, Need for Power, Need for High Financial Reward, and Need for Job Security. It is concluded that the ability of the SDI to distinguish middle level managers from 1st-level supervisors has been clearly demonstrated. (French abstract)—*J. G. Tiedemann.*

11848. **Whitley, Richard & Frost, Penelope A.** (Manchester Business School, England) **The measurement of performance in research.** *Human Relations*, 1971(Apr), Vol. 24(2), 161-178.—Discusses the standards by which individual and organizational performance is evaluated in scientific research on both the pure and applied levels. Scientific performance is not a standard set of events that can be measured across different institutional settings. Environments refer to the conceptual and material technological and institutional settings in which problems are solved. Measurement of performance becomes the understanding of how different solutions are produced to technical problems in different environments. The problem of measuring performance in scientific research, then, is part of the problem of understanding how knowledge is created and used in society. (78 ref.)—*W. W. Meissner.*

11849. **Woody, Robert H. & Woody, Jane D.** (Grand Valley State Coll.) **Behavioral science consultation.** *Personnel Journal*, 1971(May), Vol. 50(5), 382-391.—Discusses 3 basic approaches to consultation to organizations—process, psychodynamic, and behavioral models—and guidelines for accepting consultation.—*P. L. Crawford.*

SPECIAL ENVIRONMENTS

11850. **Fröberg, Jan, et al.** **Behaviour and social interaction in an experimental shelter.** *Reports from the Laboratory for Clinical Stress Research, Karolinska Sjukhuset*, 1969(Dec), No. 11, 16 p.—27 young healthy men, all volunteers from different companies of the same Swedish infantry division, were confined in a shelter for a 52-hr period, under conditions of overcrowding (.75 sq. miles/person) and moderately high temperature, relative humidity and CO₂ concentration (27-30° C, 80%, and 2% respectively). They had no contact with the outside world during the confinement. Behavior and social interaction in the shelter were observed and revealed through questionnaires. Absence of individual role or subgroup differentiation, subdued activity, and generally positive and bland interpersonal perception were noted. Adverse reactions were minor and infrequent, except in the case of 1 S, who ultimately became the focus of the group. The observed lack of differentiation is discussed

in terms of the homogeneity of the group, and the limited time of confinement. (24 ref.)—*Journal summary.*

11851. **Hori, Hayao; Takigawa, Sakurako, & Okaue, Miyako.** (Aeromedical Lab., Tokyo, Japan) [The study of mental hygiene for pilot: The evaluation of "Mental Health Check List of Pilot."] *Reports of Aeromedical Laboratory, Japan*, 1969(Jun), Vol. 10(1), 16-23.—The Mental Health Check List of Pilot (MHCP), was established through inventories referring to the Cornell Medical Index (CMI), MA scale, Flight Anxiety Scale, and use of medicines. This list was made for the purpose of screening early symptoms to lower pilots' tolerance and adjustment in their flight duty and daily life. Evaluating validity of MHCP, 68 high scored pilots were chosen among 685 pilots in 13 Japanese air bases. The 68 pilots were interviewed with face-to-face technique. Finally the result of psychological interview was compared with the result of MHCP for the validity evaluation. The following was found: (a) the MHCP is effective for more quickly determining problems of Ss; (b) the critical scale used in choosing 68 pilots is satisfactory; and (c) the selected pilots were classified into 2 groups: 70% having mental, somatic, and psychosomatic problems and 30% having no problems.—*English abstract.*

11852. **Lidberg, Lars & Seeman, Kenneth.** **Psychomotor performance before and after confinement in a shelter.** *Reports from the Laboratory for Clinical Stress Research, Karolinska Sjukhuset*, 1969(Nov), No. 9, 7 p.—27 healthy military recruits underwent shooting exercises before and after a 52-hr confinement in an experimental shelter. Ss were exposed to various conditions of physical discomfort during confinement, including (a) relatively high temperature, relative humidity, and CO₂ concentration; (b) minimal space/person (.75 sq. mile); and (c) the necessity of eating cold food. Machine pistol shooting performance was measured several days before and immediately after confinement, at the same time of day on both occasions. 1 shooting task required precision shooting, and the other, motor speed and rapid decisions. While no significant differences were found in group mean scores on either task before and after confinement, there were considerable differences in performance between the individuals. These differences did not bear any significant relationship either to initial shooting skill or to behavioral traits exhibited by Ss during confinement.—*Journal summary.*

11853. **Rubin, Robert T., Rahe, Richard H., Clark, Brian R., & Arthur, Ransom J.** (760 Westwood Plaza, Los Angeles, Calif.) **Serum uric acid, cholesterol, and cortisol levels: Interrelationships in normal men under stress.** *USN Medical Neuropsychiatric Research Unit Report*, 1970, No. 69-22, 815-819.—Repeat determinations of serum uric acid, cholesterol, and cortisol were done 3 times/wk on 20 healthy young Navy men during a 16-wk underwater demolition team training course, a period of considerable physical and psychological stress. The intraindividual correlations between uric acid and cholesterol, uric acid and cortisol, and cholesterol and cortisol all showed a considerable range of values, both positive and negative, and several of the correlations were statistically significant. However, across-S correlations of the mean values of these measures were of low order, indicating that a cross-sectional sampling design can mask the considerable variability in intraindividual values. This variability

indicates that there can be a considerable individuality in patterns of biochemical response and adaptation to stress. (34 ref.)—*Journal abstract*.

11854. **Tagigawa, Sakurako; Kakimoto, Yukiko, & Hori, Hayao.** [A survey on troubles, frustrations and personality trends in jet-pilots, JASDF.] *Reports of Aeromedical Laboratory, Japan*, 1969(Dec), Vol. 10(3), 121-130.—Surveyed 70 jet pilots to ascertain their problems and frustrations and to study the relationship between their methods of resolving trouble and personality trends. A 250-item questionnaire, the Y-G Personality Test, and Picture Frustration Test were used as measures. Main problems in order of frequency mentioned concerned how to spend leisure time, economic conditions, job and adjustment, human relations, personality, morals and religion, health, sex and marriage, and family. Results of the Picture Frustration Test indicate that Ss' average scores were considerably different from those of Japanese adult men. Trends of special responses were as follows: (a) frustrations and hostility with barriers or disturbances were not manifested considerably outside the ego, (b) scores of self-manifestation and self-torturing were considerably lower, and (c) problems and frustrations were resolved by depending on others, helping themselves, or by not channeling complaints and emotional disturbances. Results from the Y-G Test indicate that more than 70% of Ss could be classified as emotionally stable, cooperative, and well adjusted.—*English abstract*.

ADVERTISING & CONSUMER PSYCHOLOGY

11855. **Aaker, David A.** (U. California, Berkeley) **Using buyer behavior models to improve marketing decisions.** *Journal of Marketing*, 1970(Jul), Vol. 34(3), 52-57.—A powerful class of descriptive buyer behavior models has been developed during the past decade. This article explores productive managerial uses for these models. It focuses on exploiting the predictive abilities of the models and gaining information from structural analyses. The intent is to help bridge the communications gap between model builders and those who use and influence the design of computer-based information systems. (18 ref.)—*Journal abstract*.

11856. **Becker, Boris W. & Myers, John G.** (Oregon State U., School of Business & Technology) **Yeasaying response style.** *Journal of Advertising Research*, 1970(Dec), Vol. 10(6), 31-37.—"Significant distortions in semantic differential ratings" are reported which show that "yeasayers" are likely to exaggerate their ratings in both positive and negative directions. The "tendency of 'yeasayers' to prefer intuitive and perceptive modes and 'nayayers' to prefer sensory and judgmental modes ... [has] implications for advertising management."—*J. C. Franklin*.

11857. **Green, Paul E.** (U. Pennsylvania, Wharton School of Finance & Commerce) **Measurement and data analysis.** *Journal of Marketing*, 1970(Jan), Vol. 34(1), 15-17.—Discusses recent developments in multi-dimensional scaling and nonmetric methods in analyzing associative data. It is speculated that such techniques will lead ultimately to more realistic prescriptive models and more rigorous formulations of buyer behavior. Criticism is directed at the proliferation of methods in the area of cluster analysis, in particular, and the lack of a firm theoretical base.—*R. R. Shepps*.

11858. **Howard, John A.** (Columbia U., Graduate School of Business) **Buyer behavior and related**

technological advances. *Journal of Marketing*, 1970(Jan), Vol. 34(1), 18-21.—Reports on the future of consumer behavior research. It is anticipated that the development of comprehensive theories of buyer behavior will help researchers more systematically decide which facts to collect, and will facilitate the development of effective marketing information systems made possible by improved technology. Some of the implications for the marketing executive, the public policy maker, and the researcher are spelled out.—*R. R. Shepps*.

11859. **Hunt, Shelby D.** (U. Wisconsin, Graduate School of Business) **Post-transaction communications and dissonance reduction.** *Journal of Marketing*, 1970(Jul), Vol. 34(3), 46-51.—Evaluates the question of whether posttransaction communications from retailer to recent purchasers are effective in assisting customers in reducing cognitive dissonance. Possible benefits that retailers might derive from providing posttransaction communications are also discussed. Results of an experiment in which each of 3 purchaser groups received a different posttransaction message are presented. The group receiving a posttransaction letter had a higher intention of future purchase at the store; the group receiving a posttransaction telephone call had a lower future purchase intention.—*R. R. Shepps*.

11860. **Kamen, Joseph M. & Toman, Robert J.** (Indiana U. Northwest, Gary) **Psychophysics of prices.** *Journal of Marketing Research*, 1970(Feb), Vol. 7(1), 27-35.—This study in pricing finds that for gasoline a "fair price" or "expectancy" theory of pricing rather than Weber's law best explains the purchases.—*J. C. Franklin*.

11861. **Kanter, Donald L.** (U. Southern California) **Communications theory and advertising decisions.** *Journal of Advertising Research*, 1970(Dec), Vol. 10(6), 3-8.—Criticisms of current advertising research are made concerning "the use of simplistic criterion variables ... failure to take proper account of the complexity and subtlety of control variables or predisposing factors ... and general obscurity regarding the internal dynamics of advertising response."—*J. C. Franklin*.

11862. **Lodish, Leonard M.** (U. Pennsylvania, Wharton School) **Empirical studies on individual response to exposure patterns.** *Journal of Marketing Research*, 1971(May), Vol. 8(2), 212-218.—The use of the MEDIAC model "to interpret ... empirical studies provided structural hypotheses to examine and a common base for discussion of important advertising phenomena of response and forgetting." The studies examined "support the MEDIAC response model as a reasonable, flexible, consistent structure to use in evaluating alternative media plans."—*J. C. Franklin*.

11863. **Mason, Joseph B. & Mayer, Morris L.** (U. Alabama) **The problem of the self-concept in store image studies.** *Journal of Marketing*, 1970(Apr), Vol. 34(2), 67-69.—Reports the results of an investigation of in-store interviewee bias in store image studies. The findings suggest that in-store questioning can inject significant bias into the results obtained, which can be attributed to the self-concept of customers.—*Journal abstract*.

11864. **Myers, James H.** (U. Southern California) **Finding determinant buying attitudes.** *Journal of Advertising Research*, 1970(Dec), Vol. 10(6), 9-12.—The results of 2 studies (using regression analysis), 1 on cat food and the other on a snack product, raise questions concerning the "relationship between component ratings

and overall favorability ratings as buying determinants."—J. C. Franklin.

11865. Nagashima, Akira. (Daily & Assoc., Los Angeles, Calif.) **A comparison of Japanese and U.S. attitudes toward foreign products.** *Journal of Marketing*, 1970(Jan), Vol. 34(1), 68-74.—Measured the cross-cultural image of "made in..." products as perceived by both Japanese and United States businessmen. The semantic differential method was used, supplemented by unaided product recall and national image questions. Products made in the United States, Japan, England, Germany, Italy, and France were so examined.—R. R. Shepps.

11866. Petz, Boris. (Inst. of Psychology, Faculty of Philosophy, Zagreb, Yugoslavia) **Eksperimentalno ispitivanje "Slike proizvoda."** [An experimental investigation of the "product image."] *Revija za Psihologiju*, 1970, Vol. 1(2), 87-96.—Describes and illustrates the application of the semantic differential method and the checklist of attributes for obtaining the "product image" of different kinds of cars.—English abstract.

11867. Ray, Michael L. & Wilkie, William L. (Stanford U., Graduate School of Business) **Fear: The potential of an appeal neglected by marketing.** *Journal of Marketing*, 1970(Jan), Vol. 34(1), 54-62.—Presents a marketing-oriented discussion and summary of research on the fear appeal. A search of marketing literature shows that fear appeals are either not mentioned or guardedly rejected on the basis of Janis and Feshbach's research in the area of dental hygiene. This is contrasted with findings that high fear is more effective or that neither extremely strong nor extremely weak fear is particularly effective. Various segmentation hints are drawn from the research. (29 ref.)—R. R. Shepps.

11868. Russell, John T. (U. Illinois) **Consumer perception and recall as a function of selected variables.** *Dissertation Abstracts International*, 1971(Jun), Vol. 31(12-A), 6642.

11869. Seggev, Eli. (Syracuse U.) **Brand assortment and consumer brand choice.** *Journal of Marketing*, 1970(Oct), Vol. 34(4), 18-24.—Examined brand assortment and consumer brand choice in the light of a study of the stability of choice of brands over time. Results indicate that there are several types of brand-choice strategies potentially useful for segmentation purposes. The promise of the new method used to examine stability of such choice over time is stressed.—R. R. Shepps.

11870. Seipel, Carl M. (Stockholm School of Economics, Economic Research Inst., Sweden) **Premiums: Forgotten by theory.** *Journal of Marketing*, 1971(Apr), Vol. 35(2), 26-34.—Attempted to define and identify elements of behavioral theory relevant to the problem of the marketing effectiveness of free vs. low cost premium promotions. Dissonance and social-exchange theory are reviewed. Controlled experimentation with 480 Stockholm housewives used 3 levels of demanded "reciprocation" from the consumer (request by mail, and low and moderate charge for premium). Free premiums did not necessarily make such offers more attractive. (18 ref.)—R. R. Shepps.

11871. Slocum, John W. & Mathews, H. Lee. (Pennsylvania State U.) **Social class and income as indicators of consumer credit behavior.** *Journal of Marketing*, 1970(Apr), Vol. 34(2), 69-74.—Examined the

effect of social class membership and income on credit usage. It was found that social class was not necessarily a more significant determinant of consumer behavior in this area than amount of income. Behaviors examined included usage of credit cards for installment purposes and a Likert attitude scale measuring attitude toward credit card use.—R. R. Shepps.

11872. Stuteville, John R. (California State Coll., Long Beach) **Psychic defenses against high fear appeals: A key marketing variable.** *Journal of Marketing*, 1970(Apr), Vol. 34(2), 39-45.—Selectively reviews well-known literature of the last 20 yr. on the effect of high and low fear communications. Conditions likely to lead to acceptance or rejection of the communication are identified with particular emphasis on how this may be used in advertising or marketing. Examples of such marketing efforts are cited. Considerable emphasis is placed on psychodynamic defenses such as "denial of the validity of the message," the belief that "I am the exception" and "defusing" the communication of its true significance.—R. R. Shepps.

11873. Summers, John O. (Indiana U., School of Business) **The identity of women's clothing fashion opinion leaders.** *Journal of Marketing Research*, 1970(May), Vol. 7(2), 178-185.—Studied demographic, sociological, personality, attitudinal, and mass media exposure factors and involvement with clothing fashions in an effort to identify and profile fashion opinion leaders. Those identified "represent a target market with high sales potential" and were found to be "important change agents in disseminating fashion information during the fashion season." J. C. Franklin.

11874. Wheatley, John J. (U. Washington, Graduate School of Business Administration) **Assessing TV pretest audiences.** *Journal of Advertising Research*, 1971(Feb), Vol. 11(1), 21-25.—While sex and demographic characteristics, as such, "are important in determining test results," results of an experimental test of the issue suggest that the "effectiveness of a [TV] commercial can be evaluated without special consideration of whether or not the respondents in the audience are recent or regular users of the product being advertised."—J. C. Franklin.

11875. Wheatley, John J. (U. Washington, Graduate School of Business Administration) **Marketing and the use of fear- or anxiety-arousing appeals.** *Journal of Marketing*, 1971(Apr), Vol. 35(2), 62-64.—Reports on the experimental test of a hypothesis that anxiety-arousing advertising messages are more effective with nonowners of life insurance than with owners of the product. Ss were college students. Attitudes were measured in before and after message fashion by means of semantic differential scales. Difference in the observed mean attitude shift between the 2 groups was "significant at the .10 level" in favor of the nonowners, who showed the more positive reaction.—R. R. Shepps.

11876. Wheatley, John J. & Oshikawa, Sadaomi. (U. Washington) **The relationship between anxiety and positive and negative advertising appeals.** *Journal of Marketing Research*, 1970(Feb), Vol. 7(1), 85-89.—Students in the "low anxiety category exposed to negative [life insurance] copy experienced a more favorable attitude shift than those who were shown the positive copy" while "high anxiety Ss...responded more favorably to the positive copy than they did to the negative copy"—anxiety being measured by Sarason's

Lack of Protection Test and attitudes toward life insurance by 6 semantic differential scales.—J. C. Franklin.

11877. Zaltman, Gerald. (Northwestern U.) **Marketing inference in the behavioral sciences.** *Journal of Marketing*, 1970(Jul), Vol. 34(3), 27-32.—Discusses the more effective use of behavioral sciences in marketing. The process of scientific inference is discussed and reasons are offered for studying the behavioral sciences within the marketing context. It is concluded that the "value and applicability of the behavioral sciences in marketing are dependent upon 2 intuitive intellectual judgments represented... by the operational research epistemic gap and action epistemic gap." (16, ref.) *Journal abstract.*

ENGINEERING PSYCHOLOGY

11878. Maruyama, Richard T. **Visual detection of illuminating surfaces.** *U.S. Army Human Engineering Laboratories Technical Memorandum*, 1970(Oct), No. 26-70, 64 p.—Determining the requirements of helicopter lighting requires selecting the major factors that contribute to the lighting power of a surface light source. Since the light source must be functional, sky brightness, atmospheric attenuation, and other characteristics of light sources, e.g., size, shape, and angular velocity, must be studied. A model that looks at each of these variables separately is presented. More investigation is needed in the field of search time to improve the reliability of the model for given background luminances. The necessary light output for an area light source can be determined by methods described; in addition the required boundary range for a surface light source can be computed for almost all conditions.—*Journal abstract.*

11879. Prophet, Wallace W. & Boyd, H. Alton. (HumRRO Div. No. 6, Ft. Rucker, Ala.) **Device-task fidelity and transfer of training: Aircraft cockpit procedures training.** *HumRRO Technical Report*, 1970(Jul), No. 70-10, 44 p.—Evaluated the training effectiveness of 2 cockpit procedures training devices, differing greatly in their physical fidelity and cost, in the teaching of ground cockpit procedures for a twin-engine, turboprop, fixed-wing aircraft. Ss were 30 army aviators. 1 group received training in cockpit procedures in a relatively expensive, sophisticated, high-fidelity, computerized cockpit procedures trainer, while another group was trained in an inexpensive, low-fidelity mockup of the aircraft cockpit. Their subsequent performance in the actual aircraft was compared with that of a control group who received all of their procedures training in the aircraft. Results indicate that both training devices produced significant transfer of training, in terms of error and time reduction, in performance in the actual

aircraft. There were no significant differences in training effectiveness of the 2 devices, in spite of their great differences in physical fidelity and cost. Implications for the design of procedures training devices and associated training programs are discussed.—*Journal abstract.*

Displays & Controls

DRIVING & SAFETY

11880. Lucas, Richard L. (U. South Dakota) **Development and evaluation of a part task film simulation technique for training drivers on a critical passing skill.** *Dissertation Abstracts International*, 1971(May), Vol. 31(11-B), 6944-6945.

11881. McBride, Robin S. & Peck, Raymond C. (Dept. of Motor Vehicles, Sacramento, Calif.) **Modifying negligent driving behavior through warning letters.** *Accident Analysis & Prevention*, 1970(Dec), Vol. 2(3), 147-174.—Issued several types of warning letters varying in threat intensity and degree of personalized style (intimacy) to 14,620 negligent drivers. 3,019 control negligent drivers were sent cards requesting verification of addresses. 1/2 the Ss in each experimental group also received a questionnaire on attitudes toward enforcement policies and a congratulatory letter (reinforcement) for incident-free drivers in a 7-mo follow-up period. All letter treatment combinations resulted in lower accident and violation means when compared to the controls, with the low threat letter significantly better in the follow-up on accident criterion. Significant variable interactions between the letters and Ss were found. Letter effects appeared to diminish after 7 mo. Evidence for a reinforcement effect with the low threat/high intimacy letter was found. A cost/benefit analysis is presented. (French, German, & Spanish summaries) (21 ref.)—*Journal summary.*

11882. Shor, Ronald E. & Thackray, Richard I. (U. New Hampshire) **A program of research in "highway hypnosis": A preliminary report.** *Accident Analysis & Prevention*, 1970(Dec), Vol. 2(2), 103-109.—Describes an apparatus designed to include the essential features of the "highway hypnosis" situation. Preliminary results are presented which characterize the range of behavioral, psychophysiological and subjective phenomena observed with the device. (French, German, & Spanish summaries) (46 ref.)—*Journal summary.*

11883. Williams, Griffith W. & Shor, Ronald E. (Rutgers State U.) **An historical note on highway hypnosis.** *Accident Analysis & Prevention*, 1970(Dec), Vol. 2(3), 223-225.—Presents and discusses a 1921 report on the phenomena of highway hypnosis. (20 ref.)

Brief Subject Index

This index supplements the classification of abstracts given in the Table of Contents, and is designed to lead the reader to subjects that are more specific than the general categories of the classification. When many abstract numbers are listed under a heading, the reader may simplify his task by matching the numbers found under the two or more headings that specify his particular interest.

- Ability** (see also Childhood/Ability in)
10096, 10232, 10789, 10852, 10884, 11453, 11664, 11666, 11687, 11759, 11815, 11828, 11836
- Ability/Verbal** (SEE Ability, Verbal Behavior)
- Abnormal Behavior** (SEE Behavior Disorder, Mental Disorder, Neurosis, Psychosis, specific abnormalities)
- Abnormal Psychology** (SEE Clinical Psychology, Psychopathology)
- Abortion**
10637, 10658, 10908, 10924, 10988
- Absolute Judgment** (SEE Judgment/Perceptual)
- Abstraction** (SEE Concept, Generalization, Thinking)
- Academic Achievement** (SEE Achievement/Academic, Achievement/Academic-College, Achievement/Academic-Elementary School)
- Acceleration** (SEE Movement)
- Acceptance** (see also Social Approval)
10620, 10660, 10722
- Accident** (SEE Driving, Safety)
- Acclimatization** (SEE Adaptation)
- Acculturation** (SEE Conformity, Culture)
- Achievement** (see also next headings)
10079, 10232, 10616, 10691, 11388, 11582
- Achievement Motivation** (see also Achievement/Over & Under)
10674, 10770, 11297, 11462, 11571, 11578, 11647, 11666, 11673, 11687, 11698, 11721
- Achievement Need** (SEE Achievement Motivation, Aspiration & Aspiration Level, Need)
- Achievement Test** (SEE Test/Achievement)
- Achievement/Academic** (see also Achievement/Academic-College, Achievement/Academic-Elementary School, School Learning, Sex Differences/Academic Achievement)
10656, 11174, 11476, 11522, 11524, 11633, 11651, 11657, 11663, 11664, 11665, 11672, 11674, 11684, 11751, 11757, 11773
- Achievement/Academic-College** (see also Achievement/Prediction of Academic)
11411, 11457, 11578, 11599, 11644, 11645, 11647, 11662, 11666, 11667, 11671, 11673, 11677, 11681, 11682, 11686, 11687, 11690, 11694, 11710
- Achievement/Academic-Elementary School** (see also Achievement/Prediction of Academic)
10632, 11450, 11468, 11470, 11482, 11523, 11539, 11541, 11586, 11600, 11642, 11648, 11650, 11654, 11657, 11658, 11659, 11661, 11685, 11688, 11689, 11691, 11692, 11693, 11752, 11763
- Achievement/Over & Under**
11480, 11504, 11578, 11600, 11642, 11691, 11692, 11693, 11694, 11756
- Achievement/Prediction of Academic**
11531, 11572, 11686, 11687, 11688, 11689, 11690
- Acquiescence** (SEE Personality Trait)
- Acquisition** (SEE Conditioning, Learning)
- ACTH** (SEE Hormone)
- Acting Out** (SEE Antisocial Behavior, Behavior Problems, Childhood/Behavior Problems in)
- Activity** (see also Movement)

- Aftereffect**
9980, 9995, 10001, 10014, 10586, 10595, 10860, 11263
- Afterimage** (SEE Aftereffect)
- Age** (SEE Adulthood, Age Differences, Aging, Geriatrics, Gerontology)
- Age Differences**
9968, 10062, 10083, 10210, 10511, 10629, 10656, 10674, 10779, 10819, 11089, 11156, 11157, 11206, 11385, 11413, 11488, 11498, 11570, 11607, 11631, 11730, 11781, 11799, 11823
- Age Differences-Animal**
10258, 10272, 10414, 10463, 10505
- Age Differences-Children** (see also Childhood/Development in)
10258, 10511, 10520, 10538, 10541, 10550, 10561, 10563, 10568, 10575, 10578, 10582, 10588, 10591, 10593, 10615, 10621, 10625, 11260, 11396, 11500, 11601, 11650
- Aggression** (see also Hostility)
10073, 10261, 10296, 10308, 10445, 10472, 10497, 10599, 10611, 10619, 10623, 10661, 10704, 10742, 10765, 10800, 10855, 10868, 10873, 10973, 11003, 11011, 11046, 11113, 11149, 11154, 11158, 11163, 11167, 11169, 11171, 11172, 11212, 11362, 11459
- Aging** (see also Maturation)
10646, 10658, 10712
- Agriculture** (SEE Rural Environment, Occupation)
- Air Force** (SEE Military, Personnel/Military)
- Aircraft** (SEE Aviation)
- Airman** (SEE Personnel/Military, Aviation)
- Alcohol** (see also next headings)
10364, 10373, 10381, 10382, 10388, 10391, 10395, 10397, 10416, 10836, 10842, 10844, 11123, 11137, 11284
- Alcohol/Drinking of** (SEE Alcohol)
- Alcoholism**
10640, 11047, 11056, 11106, 11111, 11121, 11122, 11123, 11124, 11125, 11126, 11127, 11128, 11129, 11130, 11131, 11132, 11133, 11134, 11135, 11136, 11137, 11157
- Alienation** (see also Isolation)
10639, 10652, 10653, 10654, 10671, 10714, 10841, 10918, 11630
- Allergy** (SEE Illness, Psychosomatic Disorder)
- Alteration** (SEE Learning/Maze, Learning, Rat/Maze Learning in, Laterality)
- Altruism** (SEE Value & Values, Interpersonal Processes)
- Ambiguity** (SEE Meaningfulness, Information)
- American Psychological Association** (SEE Organizations)
- Amiripryline** (SEE Antidepressant Drugs)
- Amnesia**
10190, 10193, 10282, 10295, 11025
- Amphetamine**
10289, 10299, 10362, 10393, 10402, 10407, 10412, 10843, 11235, 11345
- Anagram** (SEE Problem Solving)
- Anal & Analality** (SEE Psychoanalytic Theory)
- Analysis** (see also Statistics)

BRIEF SUBJECT INDEX

- 11505
Anchor Effect & Anchoring (SEE Perception, Localization, the various senses)
Anger (SEE Aggression, Hostility, Emotion, Affect)
Animal Psychology (see also Sexual Behavior—Animal, Social Behavior/Animal, Comparative Psychology)
Animals (see also Bird, Cat, Chicken, Dog, Fish, Frog, Insect, Monkey, Mouse, Pigeon, Rabbit, Rat)
 9913, 9916, 10393, 10434, 10436, 10440, 10453, 10460, 10494, 10497
Anomie (SEE Alienation)
Anorexia (SEE Emotional Disturbance, Food Intake)
Anoxia (SEE Respiration)
Anthropology (SEE Culture)
Antidepressant Drugs (see also Drug Therapy)
 10390, 10415, 10959, 11029, 11032, 11033, 11055, 11064
Anti-Semitism (SEE Prejudice, Religion)
Antisocial Behavior (see also Aggression, Behavior Disorder, Crime & Criminals, Delinquency/Juvenile)
 10963, 11112, 11162, 11201, 11469
Anxiety (see also Fear, Phobia, Test Anxiety)
 10066, 10072, 10075, 10528, 10612, 10674, 10680, 10755, 10865, 10867, 10870, 10872, 10875, 10896, 10935, 10994, 10998, 11000, 11001, 11010, 11022, 11052, 11057, 11203, 11205, 11216, 11217, 11220, 11227, 11267, 11297, 11382, 11473, 11482, 11586, 11614, 11674, 11684, 11727, 11732, 11743, 11875, 11876
Anxiety/School (SEE Anxiety, School Adjustment, Test Anxiety)
Apathy (SEE Attitude, Emotion)
Aphasia (SEE Speech/Defective, Reading Deficiency)
Apparatus
 9963, 10021, 11005, 11016, 11809
Apparatus—Animal
 9962, 10437, 11536
Apparent Distance (SEE Perception/Depth)
Apparent Movement (SEE Gestalt Psychology, Visual Perception)
Appetite (SEE Food Intake)
Approach-Avoidance (SEE Conflict, Avoidance Behavior)
Approval (SEE Acceptance, Social Approval)
Aptitude (SEE Ability, Test/Aptitude)
Archimedes Spiral (SEE Illusion)
Arctic (SEE Environment)
Arithmetic (SEE Curriculum, Mathematics)
Arm Control (SEE International Relations, Law)
Army (SEE Military, Personnel/Military)
Arousal (see also Attention, Electroencephalography)
 10070, 10075, 10080, 10083, 10090, 10166, 10299, 10333, 10338, 10344, 10461, 10533, 10765, 10868, 11121, 11241, 11249
Art (SEE Aesthetics, Creativity, Drawing, Literature, Music)
Arteriosclerosis (SEE Cardiovascular Disorders)
Articulation (SEE Speech, Verbal Behavior)
Ascendence-Submission (SEE Dominance)
Aspiration & Aspiration Level (see also Expectation, Achievement Motivation)
 10638, 10702, 11224, 11564, 11571, 11788
Assimilation (SEE Adjustment/Personal & Social, Culture)
Association
 9953, 10173, 10884, 11112, 11514
Association/Word
 10102, 10136, 10167, 10196, 10197, 10218, 10827, 11510
Associations (SEE Organizations)
Asthma (SEE Illness, Psychosomatic Disorder)
Ataxia (SEE Nervous System/Disorder of, Schizophrenia/Symptomatology of)
Athletics (SEE Education/Physical, Recreation)
Attention (see also Arousal)
 10040, 10083, 10084, 10085, 10086, 10087, 10088, 10090, 10091, 10092, 10100, 10170, 10226, 10332, 10563, 10566, 10596, 11253, 11265, 11364, 11541, 11804, 11822
Attitude (see also next headings, Opinion, Prejudice, Social Perception, Stereotype, Teacher Attitudes & Personality)
 9967, 9976, 10068, 10151, 10527, 10642, 10644, 10660, 10672, 10673, 10687, 10697, 10702, 10705, 10710, 10711, 10712, 10715, 10717, 10719, 10722, 10723, 10725, 10729, 10791, 10808, 10812, 10843, 10934, 11023, 11069, 11170, 11190, 11317, 11343, 11474, 11640, 11692, 11751, 11759, 11811, 11834, 11838, 11840, 11864, 11865, 11873, 11876
Attitude Change
 9905, 10628, 10667, 10709, 10725, 10726, 10727, 10728, 10729, 10759, 10771, 10772, 10781, 10795, 10813, 10957, 11486, 11621, 11734, 11875
Attitude Measurement
 10717, 10724, 10728, 11343
Attitude Toward Mental Illness & Mental Retardation
 10690, 11376
Attitude/Student (see also Student/College-Attitudes)
 11476, 11477, 11487, 11562, 11589, 11734
Attraction (SEE Interpersonal Attraction)
Audience (SEE Communication)
Audiogenic Seizure (SEE Audition, Nervous System/Disorder of)
Audition (see also next headings, Deafness & Hearing Disorder, Ear, Intersensory Processes, Masking, Speech Perception)
 9972, 9975, 10024, 10026, 10042, 10046, 10087, 10091, 10100, 10101, 10143, 10191, 10195, 10253, 10258, 10298, 10320, 10335, 10338, 10340, 10342, 10351, 10355, 10358, 10378, 10421, 10429, 10444, 10466, 10505, 10506, 10514, 10581, 10589, 10596, 11216, 11253, 11325, 11332, 11335, 11354, 11361, 11541, 11655, 11714, 11731, 11797
Auditory Cortex & Projection Area (SEE Cerebral Cortex)
Auditory Deficit (SEE Deafness & Hearing Disorder)
Auditory Discrimination (see also Audition)
 10025, 10032, 10592, 10630, 11327, 11331, 11749
Auditory Measurement (see also Deafness & Hearing Disorder)
 10047, 10048, 10049, 10050, 10051, 10500, 11324, 11330, 11331, 11334
Auditory Perception
 10024, 10027, 10029, 10030, 10031, 10033, 10034, 10035, 10036, 10037, 10038, 10039, 10051, 10105, 10106, 10326, 10327, 10520, 10590, 10800, 10825, 10869, 10910, 11209, 11330, 11348, 11352
Auditory Thresholds (SEE Auditory Perception, Auditory Measurement)
Authoritarianism (see also Conformity)
 10609, 10753, 10793, 10862, 10866, 10871, 10888, 10895, 10927, 10940, 11614, 11631, 11633, 11640
Authority (SEE Dominance, Interpersonal Influence, Law, Management, Social Influence)
Autism (SEE Fantasy, Schizophrenia/Childhood)
Autokinetic Effect (SEE Illusion, Gestalt Psychology, Visual Perception)
Automation & Automata (SEE Computer, Industrial Psychology)
Automobile (SEE Driving)
Autonomic Nervous System (SEE Nervous System/Autonomic)
Autonomy (SEE Dependency)
Aversion & Aversiveness
 10069, 10104, 10123, 10131, 10427, 10441, 10459, 10470, 10631, 10707, 10742, 10997, 11187, 11188
Aversion Therapy (SEE Behavior Therapy)
Aviation
 11766, 11780, 11794, 11797, 11800, 11801, 11803, 11829, 11851, 11854, 11878, 11879
Avoidance Behavior (see also Rat/Avoidance & Avoidance Learning in)
 9913
Avoidance Learning (SEE Learning Avoidance)
Awareness (see also Arousal, Attention, Conscious States)
 10578, 10733, 10755, 10861, 11194
Balance (SEE Somesthesia)
Barbiturate (SEE Drugs)
Basal Metabolic Rate (SEE Metabolism)
Battered Child Syndrome (SEE Child Abuse)
Behavior (see also next headings, Child Social Behavior, n. Social Behavior Animal, Social Behavior Human)

Behavior—Animals
 10278, 11287, 10430, 10431, 10449, 10450
Behavior Disorder
 11164, 11267
Behavior Problems (see also Childhood Behavior Problems in)
 11113
Behavior Therapy
 10935, 10986, 10994, 10995, 10996, 10997, 10998, 10999, 11000, 11001, 11003, 11004, 11005, 11006, 11007, 11008, 11009, 11010, 11011, 11012, 11013, 11015, 11016, 11017, 11022, 11187, 11188, 11279, 11367, 11554, 11556, 11584, 11705, 11739
Behavioral Science
 9914, 9949, 10668, 11307, 11849, 11877
Behaviorism (SEE Behavior, Psychology History of)
Belief (SEE Attitude, Value & Values)
Bender Gestalt Test (SEE Test/Intelligence)
Benzedrine (SEE Amphetamine)
Bias (see also Prejudice, Experimentation & Experiments)
 9923, 9966, 10033, 11114, 11517, 11863
Bibliographies
 9920, 10177, 10437, 10833
Bilingualism (SEE Language, Language For Foreign)
Binet Test (SEE Test/Intelligence)
Biochemistry (see also Hormone, Metabolism)
 10248, 10260, 10281, 10312, 10359, 10460, 10361, 10363, 10365, 10366, 10367, 10368, 10369, 10380, 10385, 10388, 10393, 10399, 10401, 10410, 10421, 10426, 10921, 11045, 11050, 11199, 11204, 11241, 11256, 11287, 11360, 11366, 11386, 11435, 11853
Biographies (SEE Obituaries, History, Psychology/History of)
Biological Rhythms
 9988, 10396, 11387, 11411, 11810, 11816
Biology
 9936, 10531
Bird (see also Chicken, Pigeon)
 10425, 10463, 10495, 10506
Birth (see also Pregnancy, Mother)
 10436, 10443, 10500, 10693, 11115, 11260
Birth Control
 10696, 10708, 10709, 10908, 11042, 11720
Birth Order (see also Family Relations)
 10598, 10623, 10638, 10691, 10706, 10871, 11774
Black Power (SEE Social Movements, Integration, Negro)
Blacky Pictures (SEE Projective Techniques)
Blindness (see also Vision/Defective)
 10811, 11317, 11318, 11319, 11320, 11321, 11322, 11323, 11532, 11534, 11535, 11536
Blood (see also Cardiovascular Processes Heart)
 10312, 10360, 10376, 10396, 10411, 10421, 10923, 11056, 11064, 11199, 11204, 11247, 11266, 11287
Blood—Animal
 10281, 10361, 10365, 10388, 10417, 10417
Blood Pressure
 10372, 10420, 11050, 11808
Body (see also Hand, Physique)
 10007, 10059, 10061, 10426, 10720, 10787, 10793, 10863, 10919, 11182, 11230, 11240

BRIEF SUBJECT INDEX

- 11372, 11378
Body Image (SEE Self-Perception, Social Perception, Body)
Bone Conduction (SEE Audition)
Books
 9910, 9941, 9988, 10156, 10531, 10646, 10653, 10792, 10818, 10826, 10837, 10965, 11292, 11301, 11368, 11635
Boredom (SEE Attitude, Emotion)
Brain (see also next headings, Cerebral Cortex, Hypothalamus, Hippocampus, Nervous System/Central, Neuroanatomy, Thalamus)
 10247, 10312, 10318, 10323
Brain-Animal
 10293, 10298, 10302, 10345, 10321, 10330, 10363, 10365, 10366, 10368, 10399, 10401, 10402, 10403, 10406, 10409, 10410, 10411, 10412
Brain Damage
 11023, 11047, 11089, 11097, 11108, 11361, 11362, 11364
Brain Disorder
 11033, 11122, 11288, 11359, 11360, 11363, 11383, 11526
Brain Injury (SEE Brain Damage)
Brain Lesion (see also Brain Lesion-Animal)
 11212, 11356
Brain Lesion-Animal (see also Rat/Lesions in, Cat/Lesions in)
 10263, 10265, 10268, 10269, 10272, 10280, 10434
Brain Stimulation (see also Rat/Brain Stimulation in)
 10285, 10289, 10290, 10291, 10292, 10297, 10298, 10300, 10301, 10302, 10305, 10306, 10307, 10308, 10309, 10310, 10311, 10317, 11356
Breeding (SEE Genetics)
Brightness (see also Light)
 9995, 10022, 10023, 10268, 10276, 10356, 10486, 10503, 10508, 11878
Britain (SEE Great Britain)
Broken Home (SEE Family, Marital Problems)
Business
 11795, 11842

California Psychological Inventory (SEE Test/Personality)
Canada
 10652, 11117, 11246
Cancer (SEE Disease)
Capital Punishment (SEE Law, Crime & Criminals)
Cardiovascular Disorders
 11023, 11033, 11375, 11400
Cardiovascular Processes (see also Blood, Blood-Animal, Blood Pressure, Heart, Heart Rate)
 10130, 10131, 10372, 10417, 10418, 10419, 10420
Career (SEE Occupation)
Career Choice (SEE Occupational Choice)
Case Report
 10648, 10967, 10999, 11019, 11036, 11119, 11158, 11196, 11283, 11284, 11288, 11290, 11291, 11314, 11372, 11383, 11386, 11405
Case Report-Treatment
 10632, 10942, 10963, 10972, 10984, 11003, 11185, 11187, 11188, 11191, 11282, 11285, 11286, 11287, 11289, 11313, 11359, 11556
Casework (SEE Social Casework)
Castration (SEE Personality, Sex, Sexual Behavior)
Cat
 10245, 10251, 10253, 10285, 10292, 10298, 10300, 10301, 10302, 10305, 10306, 10307, 10308, 10309, 10311, 10329, 10338, 10343, 10344, 10345, 10358, 10428
Cat/Drug Effects in
 10285, 10289, 10290, 10392, 10398, 10405, 10408
Cat/Learning in
 10289, 10310, 10311
Cat/Lesions in
 10251, 10274, 10275, 10276, 10419
Catalepsy (SEE Mental Disorder, Neurosis, Psychosis)
Categorical Behavior
 9939, 9974, 10158, 10165, 10174, 10178, 10181, 10203, 10523, 10541, 10548, 10567, 10910
Catharsis (SEE Therapeutic Process)
Cathexis (SEE Affect, Psychoanalytic Theory)
Catholicism (SEE Religion)
Census Studies (SEE Population Characteristics)
Central Nervous System (SEE Nervous System/Central)
Cerebral Cortex (see also Visual Cortex)
 10005, 10244, 10247, 10253, 10255, 10258, 10259, 10268, 10274, 10275, 10277, 10285, 10286, 10297, 10302, 10306, 10315, 10333, 10343, 10345, 10348, 10417, 10419, 10422, 10532, 11247, 11325
Cerebral Dominance (SEE Cerebral Cortex, Laterality)
Cerebral Palsy (SEE Physical Handicap, Nervous System/Disorder of)
Cerebral Thrombosis (SEE Brain Disorder, Cardiovascular Disorders)
Cerebrovascular Disorder (SEE Brain Disorder, Cardiovascular Disorders)
Certainty (see also Probability)
 10207, 10231, 10233, 10240, 10791
Character (SEE Personality, Ethics)
Character Disorder (see also Emotional Disturbance)
 11136, 11177, 11208, 11212
Cheating (SEE Deception)
Check List (SEE Inventory)
Chicken
 10417, 10444, 10461, 10502
Child Abuse
Child Guidance (SEE Psychotherapy/Children, Guidance/Educational)
Child Psychiatry (see also Psychotherapy/Children, Schizophrenia/Childhood, Childhood/Psychosis in)
 10975, 11095, 11096, 11099
Child Rearing (see also Parent-Child Relations)
 10594, 10607, 10622, 10624, 10634, 10692, 11692
Childhood & Children (see also next headings, Gifted, Student/Elementary School, Language Development, Mental Retardation)
 10522, 10528, 10530, 10532, 10533, 10838, 11102, 11346, 11526
Childhood/Ability in
 10525, 10526, 10529, 10538, 10563, 10569, 10574, 10575, 10576, 10578, 10579, 10580, 10581, 10582, 10583, 10584, 10595, 10622, 10624, 10688, 11447, 11451, 11495, 11501, 11508, 11518, 11519, 11646, 11669, 11678, 11695, 11746, 11764
Childhood/Behavior Problems in
 10540, 11002, 11008, 11030, 11115, 11293, 11313, 11362, 11530, 11540, 11576, 11601, 11705, 11739
Childhood/Concepts & Problem Solving in
 10525, 10530, 10534, 10552, 10554, 10555, 10556, 10557, 10558, 10559, 10560, 10561, 10562, 10563, 10564, 10565, 10566, 10567, 10568, 10569, 10570, 10571, 10572, 10682, 10970, 11370, 11396, 11545, 11689, 11725, 11736
Childhood/Development in (see also Age Differences-Children)
 10509, 10510, 10512, 10516, 10519, 10522, 10523, 10524, 10526, 10529, 10530, 10531, 10534, 10539, 10542, 10547, 10554, 10559, 10562, 10564, 10565, 10568, 10569, 10573, 10575, 10580, 10587, 10595, 10596, 10598, 10599, 10607, 10608, 10613, 10614, 11260, 11323, 11348, 11371, 11447, 11473, 11715
Childhood/Disadvantaged (see also Socioeconomic Status)
 10516, 10524, 10535, 10548, 10549, 10561, 10577, 10617, 10622, 10624, 10662, 10943, 11445, 11477, 11485, 11495, 11501, 11623, 11646, 11649, 11651, 11678, 11691, 11693, 11695, 11704, 11708, 11712, 11723, 11726, 11729, 11733, 11738, 11740, 11746
Childhood/Emotional Disturbances in
 10613, 10905, 10927, 10943, 11079, 11094, 11096, 11097, 11223, 11229, 11293, 11554, 11555, 11558, 11575
Childhood/Family Relations in (SEE Parent-Child Relations, Family Relations)
Childhood/Gifted (SEE Gifted)
Childhood/Handicapped
 10613, 11104, 11316, 11323, 11328, 11352, 11372, 11530, 11534, 11535
Childhood/Hyperactivity in (SEE Childhood/Behavior Problems in)
Childhood/Learning in (see also Achievement/Academic-Elementary School, Student/Elementary School, School Learning)
 10524, 10525, 10534, 10535, 10536, 10537, 10538, 10539, 10540, 10541, 10542, 10543, 10544, 10545, 10546, 10547, 10548, 10549, 10550, 10551, 10552, 10553, 10558, 10560, 10565, 10567, 10579, 10612, 11002, 11362, 11392, 11396, 11519
Childhood/Mental Retardation in (SEE Mental Retardation)
Childhood/Perception in
 10543, 10545, 10555, 10557, 10564, 10580, 10585, 10586, 10587, 10588, 10589, 10590, 10591, 10592, 10593, 10596, 10597, 10601, 10606, 11345, 11348, 11352, 11354, 11518, 11535, 11538, 11655, 11658, 11659, 11689, 11715
Childhood/Personality in
 10531, 10537, 10572, 10586, 10594, 10598, 10599, 10600, 10601, 10602, 10603, 10604, 10605, 10606, 10607, 10610, 10611, 10612, 10619, 10623, 10688, 11323, 11459, 11469, 11477, 11490
Childhood/Physical Illness in
Childhood/Play in (SEE Childhood/Social Behavior in)
Childhood/Preschool
 10378, 10524, 10527, 10528, 10542, 10544, 10545, 10548, 10549, 10551, 10555, 10558, 10559, 10560, 10562, 10566, 10567, 10574, 10576, 10577, 10580, 10591, 10592, 10598, 10606, 10610, 10618, 10620, 10625, 10943, 11258, 11349, 11350, 11439, 11445, 11451, 11469, 11495, 11518, 11519, 11528, 11538, 11582, 11641, 11651, 11655, 11688, 11689, 11695, 11704, 11714, 11715, 11729, 11733, 11740
Childhood/Psychosis in
 11242
Childhood/Psychotherapy (SEE Psychotherapy/Children)
Childhood/Retarded (SEE Mental Retardation)
Childhood/Schizophrenia in (SEE Schizophrenia/Childhood)
Childhood/Social Behavior in
 10556, 10603, 10605, 10608, 10609, 10610, 10611, 10612, 10613, 10614, 10615, 10616, 10617, 10618, 10619, 10620, 10621, 10625, 11441, 11469, 11490, 11519, 11708
Chlordiazepoxide (SEE Tranquilizer)
Chlorpromazine
 10414, 11036
Choice Behavior (see also Decision Making, Learning/Probability)
 10110, 10207, 10229, 10230, 10231, 10234, 10235, 10236, 10239, 10241, 10544, 10842, 11297, 11869
Chromosome (SEE Genetics)
City (SEE Urban & Suburban Environment)
Civil Rights (SEE Social Movements, Integration, Law)
Class (SEE Social Structure, Socioeconomic Status)
Classical Conditioning (SEE Conditioning/Classical)
Classification (see also Selection, Categorical Behavior)
 9960, 10218, 10222, 10569, 10579, 11507
Classroom (see also Education, School, Teaching)
 11438, 11451, 11534, 11554, 11619, 11639,

BRIEF SUBJECT INDEX

- 11660, 11711, 11744, 11747, 11760
Cleft Lip & Palate (SEE Speech/Defective)
Clergy (SEE Religion)
Client-Centered Therapy (SEE Psychotherapy/Methods in)
Climate (SEE Environment, Temperature)
Clinic (see also Community Services, Hospital, Treatment/Outpatient)
 11217, 11236
Clinical Judgment (see also Psychodiagnostics)
 10930, 10934, 10939, 11091, 11093, 11099, 11103, 11109, 11306
Clinical Psychology
Cluster Analysis (SEE Factor Analysis, Statistics)
Coalition Formation (SEE Group/Small)
Cochlea (SEE Ear)
Coding (SEE Categorical Behavior, Problem Solving, Display)
Cognition (see also Thinking, Categorical Behavior)

 10701, 10754, 10926, 11296, 11312, 11322
Community Services (see also Clinic, Mental Health)
 10622, 10624, 10904, 11134, 11138, 11141, 11142, 11143, 11147, 11258, 11415, 11416, 11417, 11418, 11419, 11420, 11421, 11422, 11423, 11424, 11425, 11426, 11427, 11429, 11430, 11431, 11432, 11467
Comparative Psychology (see also Animal Psychology)
Competition (see also Conflict, Cooperation, Motivation)
 9940, 10498, 10736, 10746, 10769, 10775, 10777, 10802, 10941, 11224, 11441, 11718
Complexity (see also Cognitive Style, Stimulus)
 10062, 10090, 10092, 10205, 10893, 11670, 11836
Comprehension (see also Thinking, Reading)
 10562, 10570, 10595, 11326, 11703
Compulsion (SEE Obsession-Compulsion)
Computer
 9949, 9950, 9951, 9952, 9953, 9959, 10119, 10120, 10237, 10337, 10626, 10828, 11098, 11745, 11791, 11793, 11831
Concentration Camp (SEE Prison, War)
Concept (see also Childhood/Concepts & Problem Solving in, Concept Formation, Thinking)
 10089, 10155, 10211, 10213, 10214, 10215, 10216, 10217, 10219, 10220, 10221, 10223, 10225, 10226
Concept Formation (see also Childhood/Concepts & Problem Solving in)
 10160, 10218, 10227, 10571
Conditioned Emotional Response
 10124, 10304, 10309, 10311
Conditioned Galvanic Skin Response (SEE Galvanic Skin Response)
Conditioned Reflex (SEE Conditioned Response, Reflex)
Conditioned Response
 10435, 10485, 11203
Conditioning (see also next headings)
 10070, 10123, 10124, 10125, 10126, 10128, 10129, 10130, 10133, 10154, 10269, 10460, 10461, 10521, 10952, 10997, 10998, 11002
Conditioning/Avoidance (SEE Learning/Avoidance, Rat/Avoidance & Avoidance Learning in)
Conditioning/Classical
 10125, 10126, 10129, 10131, 10134, 10310, 10466, 10485, 11203, 11399
Conditioning/Escape (SEE Escape)
Conditioning/Eyelid
 10134, 11156, 11399
Conditioning/Interceptive
 10435
Conditioning/Operant (see also Rat/Conditioning in)
 10127, 10132, 10306, 10416, 10464, 10482, 10483, 10485, 10488, 10999, 11011, 11014, 11179, 11291, 11377, 11438, 11644, 11747
Conditioning/Verbal (SEE Learning/Verbal)
Conference (SEE Symposium)
Confidence Judgment (SEE Certainty)
Conflict (see also Frustration, Learning/Avoidance, Interpersonal Processes)
 10071, 10208, 10243, 10632, 10704, 10727, 10737, 10777, 11262, 11463, 11484, 11839, 11841, 11845
Conformity (see also Authoritarianism, Dominance, Expectation, Interpersonal Influence, Social Influence)
 10136, 10630, 10638, 10671, 11208
Congress (SEE Symposium)
Connotation (SEE Meaning, Semantics)
Conscience (SEE Value & Values, Ethics, Motivation)
Conscious States (see also Awareness)
 9909, 10067, 10319, 10326, 10378, 10832, 11284, 11339
Conservation (SEE Childhood/Concepts & Problem Solving in)
Conservatism (SEE Political Behavior, Personality Trait)
Consonance (SEE Dissonance)
Constancy (SEE Gestalt Psychology, Visual Perception, Perception)
Consumer Behavior (see also Advertising)
 11855, 11857, 11858, 11859, 11860, 11863, 11864, 11865, 11866, 11867, 11868, 11869, 11870, 11871, 11872, 11873, 11875, 11876, 11877
Contagion (SEE Interpersonal Influence, Social Influence)
Content (SEE Information, Meaning)
Context
 10194, 10242, 10616, 10830
Contraception (SEE Birth Control)
Contribution & Criticism
 9913, 9931, 9942, 9968, 9983, 10110, 10138, 10148, 10230, 10403, 10584, 10609, 10622, 10626, 10649, 10668, 10699, 10716, 10794, 10815, 10822, 10883, 11135, 11142, 11143, 11186, 11202, 11250, 11305, 11308, 11495
Control (see also Display)
 11745
Control/Internal-External
 9987, 10231, 10234, 10699, 10789, 10793, 10864, 10874, 10889, 10890, 11297, 11598, 11700
Convulsion (SEE Electroconvulsive Shock, Nervous System/Disorder of, Epilepsy)
Cooperation
 10452, 10736, 10737, 10752, 10775, 11441
Coordination (SEE Motor Performance)
Coping Behavior (SEE Adjustment/Personal & Social)
Copulatory Behavior (SEE Sexual Behavior-Animal)
Correlation (see also Factor Analysis, Statistics)
 9926, 9932, 9938, 10038, 11817, 11837
Cortex (SEE Cerebral Cortex, Visual Cortex)
Counseling (see also Guidance/Educational, Guidance/Vocational, Interview)
 10934, 10935, 11132, 11276, 11298, 11299, 11300, 11301, 11302, 11303, 11304, 11307, 11385, 11559, 11560, 11561, 11562, 11563, 11565, 11567, 11568, 11569, 11570, 11573, 11574, 11576, 11578, 11580, 11581, 11582, 11583, 11587, 11588, 11589, 11590, 11593, 11596, 11598, 11600, 11762
Counseling/College (SEE Guidance/Educational, Guidance/Vocational)
Counselor
 10934, 10935, 11301, 11303, 11305, 11307, 11308, 11390, 11563, 11584, 11592, 11597, 11603, 11607
Countertransference (SEE Interpersonal Processes, Psychotherapy, Psychoanalysis, Therapeutic Process)
Counting (SEE Mathematics, Number)
Court (SEE Law, Crime & Criminals)
Courtship (SEE Interpersonal Attraction)
Creativity (see also Aesthetics, Gifted, Literature, Music, Thinking)
 10594, 10626, 10627, 10688, 10735, 10763, 10879, 10880, 10881, 10882, 10883, 10884, 10901, 11660, 11675, 11711, 11736, 11740
Credibility (SEE Experimentation & Experiments, Interpersonal Influence, Social Perception)
Crime & Criminals (see also Delinquency/Juvenile, Law, Prison)
 11100, 11114, 11147, 11148, 11149, 11150, 11151, 11152, 11153, 11154, 11155, 11156, 11157, 11158, 11159, 11160, 11161, 11162, 11163, 11165, 11166, 11167, 11168, 11169, 11181, 11243
Crisis & Crisis Intervention (see also Community Services, Emotion)
 10741, 10780, 10903, 10914, 10945, 11069, 11076, 11083, 11172, 11420, 11843
Critical Flicker Fusion (SEE Vision)
Criticism (SEE Contribution & Criticism)
Cross-Cultural Differences (see also Culture, Cultures & Countries)
 10683, 10684, 10685, 10686, 10687, 10688, 10689, 10690, 11231, 11632
Cue
 10011, 10034, 10037, 10113, 10138, 10157, 10161, 10184, 10445, 10464, 10466, 10474, 10616, 10868, 10910, 11357, 11655, 11794, 11797
Cultural Anthropology (SEE Culture)
Cultural Disadvantage (SEE Socioeconomic Status, Childhood/Disadvantaged)
Culture (see also Cultures & Countries, Ethnology, Social Influence)
 9919, 10531, 10608, 10627, 10657, 10661, 10663, 10673, 10700, 10701, 10702, 10709, 10714, 10946, 11089, 11145, 11520
Cultures & Countries (see also Culture, Africa, Canada, France, Germany, Great Britain, India, Israel, Japan, Latin America, United States, USSR)
 9921, 10159, 10650, 10659, 10660, 10666, 10683, 10684, 10686, 10688, 10691, 10692, 10697, 10697, 10701, 10707, 10829, 10916, 11146, 11232, 11234, 11237, 11380, 11497

- 11513, 11672, 11720
Curiosity (SEE Motivation, Thinking)
Curriculum (see also School Administration, Mathematics, Reading)
 10628, 10875, 11455, 11511, 11515, 11525, 11554, 11569, 11625, 11652, 11657, 11662, 11674, 11676, 11679, 11697, 11699, 11701, 11702, 11703, 11709, 11711, 11714, 11715, 11716, 11717, 11719, 11721, 11725, 11727, 11728, 11731, 11732, 11734, 11735, 11743, 11748, 11763
Cutaneous Sense (see also Skin)
 9968, 9975, 10055, 10056, 10057, 10059, 10062, 10091, 10100, 10101, 10245, 10272, 10343, 10418, 10511, 10580, 10755, 11321, 11329, 11355, 11535
Cybernetics (SEE Communication, Feedback, Computer)

Dark Adaptation (SEE Adaptation, Sensory)
Data Processing (SEE Computer Statistics)
Day Dreaming (SEE Fantasy)
Deafness & Hearing Disorder
 11324, 11325, 11326, 11327, 11328, 11329, 11330, 11331, 11332, 11333, 11334, 11335, 11336, 11530, 11531, 11533
Death (see also Suicide)
 10286, 10651, 10680, 10716, 10858, 11375
Death Penalty (SEE Law)
Deception
Decision Making (see also Choice Behavior, Game, Learning/Probability)
 10226, 10228, 10232, 10233, 10235, 10236, 10237, 10240, 10242, 10243, 10764, 10774, 10777, 10783, 10967, 11548, 11766, 11792, 11795, 11840, 11842, 11861
Decoding (SEE Categorical Behavior, Problem Solving, Display)
Defecation (SEE Elimination)
Defense Mechanism (see also Identification, Repression)
 10785, 10786, 10859, 10990
Defense/Perceptual (SEE Defense Mechanism)
Defensiveness (SEE Defense Mechanism, Personality Trait)
Deja Vu (SEE Familiarity, Parapsychology)
Delayed Reaction (SEE Response)
Delinquency/Juvenile (see also Antisocial Behavior, Crime & Criminals)
 10637, 10662, 10963, 11013, 11046, 11170, 11171, 11172, 11173, 11174, 11175, 11176, 11177, 11178, 11179, 11180, 11181, 11182, 11183, 11184
Delirium (SEE Mental Disorder, Neurosis, Psychosis)
Delusion (SEE Mental Disorder, Neurosis, Psychosis)
Demographic Variables (SEE Population Characteristics)
Denial (SEE Defense Mechanism)
Dependency
 9985, 10586, 10606, 10610, 10845, 10853, 10854, 10859, 10865, 10890, 11121, 11403, 11645
Depression (see also Emotion, Emotional Disturbance)
 10449, 10450, 10959, 11026, 11027, 11029, 11035, 11043, 11046, 11050, 11057, 11059, 11060, 11063, 11064, 11204, 11205, 11211, 11218, 11220, 11224, 11238, 11358
Deprivation (see also Deprivation/Sensory, Food Deprivation, Isolation, Rat/Deprivation in)
 10423, 10516, 10699, 11026, 11126
Deprivation/Sensory
 10012, 10276, 10417, 10502
Depth Perception (SEE Perception/Depth)
Desegregation (SEE Integration)
Desensitization Therapy (SEE Behavior Therapy)
Detection
 10021, 10028, 10032, 10033, 10037, 10038, 10084, 10085, 10087, 10091, 10110, 10298, 10316, 10317, 11804, 11878

Developing Countries (SEE Cultures & Countries)
Development (see also Childhood/Development in, Language Development, Maturation)
 10328, 10433, 10495, 10509, 10510, 10512, 10608, 10635, 10852, 11372, 11412, 11722
Dexterity (SEE Hand, Motor Performance)
Diabetes (SEE Blood, Disease)
Diagnosis (see also Psychodiagnosis, Schizophrenia/Diagnosis of, Mental Retardation/Diagnosis of)
 11038, 11097, 11104, 11105, 11328, 11363, 11502, 11542, 11549
Diagnosis/Differential
 11106
Dial (SEE Display)
Diet (SEE Food)
Differential Reinforcement at Low Rates of Responding (SEE Reinforcement Schedule)
Digestive System (see also Metabolism)
 10408, 10432, 10435, 11405
Digit (SEE Number)
Disability (SEE Physical Handicap)
Disarmament (SEE War, International Relations)
Discrimination (see also Auditory Discrimination, Learning/Discrimination, Visual Discrimination, Rat/Discrimination in)
 10002, 10057, 10118, 10208, 10511, 10560, 10574, 11810
Discrimination Learning (SEE Learning/Discrimination)
Discrimination Reversal
Discrimination/Racial (SEE Integration, Prejudice, Social Movements)
Disease (see also Illness)
 11130, 11353, 11389, 11401, 11406
Displacement (SEE Defense Mechanism)
Display (see also Control)
Dissonance (see also Attitude Change)
 10565, 11299, 11859
Distance (SEE Perception/Depth)
Distraction (SEE Attention)
Diurnal Rhythms (SEE Biological Rhythms)
Divorce (SEE Marital Problems)
DNA (SEE Biochemistry)
Dog
 9917, 10257, 10397, 10435, 10464, 10466, 10485
Dogmatism (SEE Authoritarianism, Personality Trait)
Dominance (see also Authoritarianism)
 10794, 10888, 11248, 11465
Double Blind Design (SEE Experimental Design)
Down's Syndrome (SEE Genetics, Mental Retardation)
Draft (SEE Military)
Draw-a-Man Test (SEE Projective Technique)
Draw-A-Person Test (SEE Projective Technique)
Drawing (see also Aesthetics, Creativity, Picture)
 10536, 10578, 10582, 10601, 11107, 11451, 11736
Dream & Dreaming (see also Rapid Eye Movement, Sleep)
 10065, 10374, 10656, 10838, 10942, 11200
Drinking (SEE Alcohol, Water & Water Intake)
Drive (SEE Motivation)
Driving (see also Safety)
 11113, 11880, 11881, 11882, 11883
DRL (SEE Reinforcement Schedule)
Dropout (SEE School Dropout)
Drug Addiction (see also Drug Effects, Drugs)
 11034, 11111, 11116, 11117, 11118, 11119, 11120, 11172
Drug Effects (SEE next headings, Drug Addiction)
Drug Effects-Animal (see also Rat/Drug Effects in, Cat/Drug Effects in, Drugs)
 10252, 10263, 10286, 10389, 10390, 10393, 10394, 10397, 10404, 10416
Drug Effects-Human (see also Drug Addiction, Drugs)
 10362, 10364, 10372, 10373, 10374, 10375, 10376, 10377, 10378, 10379, 10380, 10381, 10382, 10383, 10384, 10385, 10386, 10387, 11037, 11038, 11051, 11065, 11137, 11410
Drug Therapy
 10390, 10910, 10959, 11001, 11029, 11030, 11031, 11032, 11033, 11034, 11035, 11036, 11037, 11038, 11039, 11040, 11041, 11042, 11043, 11044, 11045, 11046, 11047, 11048, 11049, 11050, 11051, 11052, 11053, 11054, 11055, 11056, 11057, 11058, 11059, 11060, 11061, 11062, 11063, 11064, 11065, 11117, 11120, 11124, 11136, 11278, 11285, 11289, 11345, 11351, 11359, 11365
Drug Therapy-Schizophrenia
 11029, 11041, 11045, 11059, 11277, 11278
Drug Usage & Abuse (see also Drug Addiction, Drugs)
 10637, 10838, 10840, 10841, 10843, 10844, 10846, 10847, 10848, 11116, 11120, 11148, 11702, 11709
Drugs (see also Amphetamine, Antidepressant Drugs, Chlorpromazine, Lysergic Acid Diethylamide, Marijuana, Tranquilizer)
 10360, 10367, 10375, 10379, 10386, 10387, 10391, 10394, 10399, 10403, 10404, 10409, 10412, 10413, 10431, 11042, 11043, 11054, 11062, 11119, 11278, 11365
Dyad (SEE Group/Small, Interpersonal Processes)
Dyslexia (SEE Reading Deficiency)

Ear (see also Audition)
 10036, 10038, 10331, 10338, 11324, 11325
Eating (SEE Food, Food Intake)
Ecology (SEE Environment)
Education (see also next headings, College, Curriculum, School, Teaching, Training)

Honesty (SEE Deception)
Hormone (see also Epinephrine)
 10260, 10291, 10368, 10370, 10371, 10373, 10388, 10392, 10396, 10401, 10402, 10406, 10423, 10426, 11197, 11285, 11287, 11289
Hospital & Hospitalization (see also Clinic, Institution & Institutionalization, Mental Hospital & Hospitalization)
 11023, 11068, 11135, 11314, 11425, 11433
Hostility (see also Aggression)
 10665, 10784, 10800, 11011, 11025, 11046, 11185, 11221
Hue (SEE Color)
Human Engineering (SEE Engineering Psychology)
Humor (see also Literature, Language, Emo-

tion)
 10080, 10960
Hunger (SEE Food Deprivation, Motivation)
Husband (SEE Marriage)
Hypnosis
 9967, 10066, 10067, 10068, 11018, 11020, 11021, 11022, 11025, 11882, 11883
Hypnotherapy (SEE Hypnosis, Psychotherapy/Methods in)
Hypothalamus
 10257, 10273, 10278, 10279, 10281, 10285, 10289, 10290, 10291, 10296, 10309, 10310, 10329
Hysteria & Hysterics (see also Mental Disorder, Neurosis, Psychosis)
 11112, 11206
Id (SEE Psychoanalytic Theory)
Identification
 9952, 10213, 10217, 10225, 10535, 10805, 10807, 10894, 10955, 10962, 10979, 11182, 11243, 11248, 11271, 11528, 11798
Identity
 10559, 10625, 10885, 11165
Illegitimate Pregnancy (SEE Pregnancy, Mother)
Illness (see also Disease)
 10058, 10911, 10915, 10919, 11209, 11245, 11402, 11403, 11405, 11406, 11407, 11408, 11409, 11410, 11411, 11412
Illumination (SEE Brightness, Environment)
Illusion
 9978, 9979, 9980, 9981, 9982, 9983, 9984, 9996
Image (see also Self-Perception, Social Perception, Body)
 10004, 10018, 10199, 10574, 10793
Imagery
 10182, 10197, 10550
Imagination (SEE Fantasy, Cognition, Thinking)
Imitation (see also Instinctive Behavior, Interpersonal Processes, Model)
 10610, 10612, 10618, 10620, 10744, 11384
Impression Formation (SEE Social Perception)
Imprinting (SEE Instinctive Behavior, Experience/Early)
Incentive (see also Motivation, Reward, Reinforcement)
 10029, 10769, 11442
Incest (SEE Sexual Deviation)
Incidental Learning (SEE Learning)
Income (SEE Money, Socioeconomic Status)
Independency (SEE Dependency)
India
 10669, 10674, 10685, 10816, 11199, 11206, 11631, 11632, 11783
Indian/American (SEE Ethnology)
Individual Differences
 9999, 10129, 10746, 11109, 11540
Industrial Psychology (see also Business, Personnel/Industrial)
 11771, 11772
Industry (SEE Business, Personnel/Industrial)
Infancy (see also Neonate)
 10258, 10378, 10513, 10514, 10515, 10516, 10517, 10518, 10519, 10520, 10521, 10532, 10651, 11219, 11371
Influence (SEE Interpersonal Influence, Persuasion, Social Influence)
Information (see also Communication, Information Theory, Language)
 9927, 9950, 9953, 9967, 9994, 10006, 10119, 10135, 10162, 10169, 10181, 10183, 10191, 10192, 10195, 10204, 10208, 10209, 10216, 10219, 10225, 10227, 10240, 10256, 10381, 10558, 10580, 10711, 10758, 10797, 10809, 10813, 10830, 11299, 11361, 11449, 11584, 11588, 11745
Information Retrieval (SEE Information, Computer)
Information Theory (see also Information)
 9920, 10209, 10224, 11307
Inheritance (SEE Genetics)
Inhibition (see also Extinction, Interference)

BRIEF SUBJECT INDEX

- 10013, 10114, 10142, 10146, 10393, 10410, 10456, 10587, 11025, 11337, 11681
- Inkblot** (SEE Projective Technique, Rorschach Test)
- Insect**
- Insecurity** (SEE Dependency, Neurosis)
- Insight** (SEE Problem Solving, Thinking, Self-Perception, Social Perception, Therapeutic Process)
- Instinctive Behavior** (see also Sexual Behavior-Animal)
10425, 10444, 10445, 10499, 10855
- Institute** (SEE Organizations, College)
- Institution & Institutionalization** (see also Hospital & Hospitalization, Mental Hospital & Hospitalization)
10524, 10924, 11028, 11079, 11150, 11172, 11178, 11183, 11368, 11374, 11434
- Instruction** (see also Teaching)
10119, 10156, 11463, 11500, 11791, 11802, 11803
- Instructions/Experimental**
10018, 10051, 10112, 10122, 10161, 10187, 10208, 10234, 10377, 10541, 10552, 10595, 11007, 11576
- Insulin** (SEE Hormone)
- Insulin Shock Therapy** (SEE Therapy)
- Integration**
10723
- Intellectual Processes** (SEE Cognition, Thinking)
- Intelligence** (see also next headings)
10538, 10554, 10572, 10573, 10577, 10578, 10582, 10621, 10623, 10645, 10651, 10794, 10929, 11156, 11175, 11341, 11358, 11396, 11445, 11450, 11468, 11499, 11511, 11519, 11537, 11550, 11586, 11658, 11684, 11767, 11868
- Intelligence Quotient**
10576, 10629, 10879, 11260, 11531, 11553
- Intelligence Tests & Testing** (SEE Test/Intelligence)
- Intensity** (SEE Stimulus Intensity, Shock & Shock Intensity)
- Interest** (see also Motivation)
10088, 10687, 11594, 11777, 11789
- Interest/Vocational** (SEE Occupational Interest)
- Interference**
9972, 10034, 10098, 10121, 10146, 10168, 10179, 10180, 10187, 10199, 11214, 11265, 11652
- Internal-External Control** (SEE Control/Internal-External)
- International Relations**
- Interpersonal Attraction**
10689, 10747, 10762, 10791, 10797, 10944, 10957, 11559, 11592, 11777
- Interpersonal Influence**
10616, 10687, 10741, 10779, 10783, 10794, 10813, 11592
- Interpersonal Perception** (SEE Social Perception)
- Interpersonal Processes** (see also Interpersonal Attraction, Interpersonal Influence, Group, Social Processes, Family Relations)
10120, 10149, 10613, 10614, 10617, 10650, 10694, 10727, 10731, 10732, 10733, 10734, 10736, 10737, 10738, 10739, 10742, 10743, 10744, 10745, 10746, 10747, 10751, 10752, 10755, 10757, 10760, 10765, 10767, 10769, 10771, 10774, 10776, 10778, 10780, 10786, 10787, 10788, 10792, 10793, 10795, 10800, 10801, 10802, 10814, 10944, 10990, 10992, 11000, 11010, 11012, 11226, 11317, 11322, 11343, 11416, 11465, 11475, 11596, 11721, 11762, 11829
- Interresponse Interval** (SEE Interval/Time)
- Intersensory Processes**
9968, 9972, 9973, 10025, 10358, 11797
- Interval/Intestimulus**
10029, 10032, 10035, 10051, 10074, 10118, 10298, 10399, 10455, 10461, 10546, 10798, 11361, 11399
- Interval/Time**
9987, 10033, 10050, 10060, 10145, 10165, 10191, 10198, 10216, 10342, 10381, 10480, 10571, 10876
- Interview & Interviewing** (see also Counseling, Guidance/Educational, Guidance/Vocational, Psychotherapy)
10751, 10779, 10931, 10942, 10954, 11093, 11098, 11304, 11566
- Introversion** (SEE Extroversion-Introversion)
- Intuition** (SEE Thinking, Cognition)
- Inventory** (see also Questionnaire, Survey)
10337, 10839, 10888, 10899, 11101, 11102, 11221, 11481, 11494, 11593, 11778, 11789, 11851
- Isolation** (see also Alienation)
10012, 10122, 10283, 10439, 10450, 10495, 10859, 11460
- Israel**
10584
- Item** (see also Test & Testing, Testing Methods)
9956, 9959, 10886, 11153
- Japan**
10650, 10663, 10683, 10687, 10801, 11391, 11865
- Jew** (SEE Religion, Ethnology)
- Job** (SEE next headings, Occupation, Personnel/Industrial, Work & Work Analysis)
- Job Evaluation** (SEE Occupation, Work & Work Analysis)
- Job Performance**
11606, 11611, 11612, 11628, 11766, 11769, 11770, 11802, 11804, 11815, 11816, 11817, 11818, 11819, 11820, 11822, 11823, 11824, 11826, 11827, 11828, 11831, 11835, 11836, 11838
- Job Satisfaction**
11778, 11782, 11788, 11818, 11821, 11825, 11827, 11829, 11830, 11832, 11833, 11834, 11837, 11840
- Judgment**
9939, 9976, 10224, 10242, 10561, 10683, 10713, 10731, 10743, 10799, 10824
- Judgment/Perceptual** (see also Perception, the various senses)
9975, 9981, 10018, 10022, 10052, 10061, 10590, 10591, 10863, 11205, 11318, 11361
- Junior College** (SEE College)
- Junior High School** (SEE School, Student/Junior High School)
- Juvenile Delinquency** (SEE Delinquency/Juvenile)
- Kibbutz/Israel** (SEE Israel)
- Kindergarten** (SEE Childhood/Preschool)
- Kinesthesia** (see also Movement)
10107, 10511, 11535
- Kinship** (SEE Family, Culture)
- Knowledge of Results** (SEE Feedback, Reinforcement, Information)
- Korsakov's Psychosis** (SEE Alcoholism, Brain Disorder)
- Labor Relations** (SEE Personnel/Industrial, Management)
- Language** (see also next headings, Communication, Information, Speech, Psycholinguistics, Verbal Behavior)
10109, 10139, 10171, 10192, 10560, 10577, 10581, 10653, 10655, 10811, 10820, 10821, 10822, 10823, 10824, 10825, 10826, 10828, 10829, 10830, 11254, 11329, 11341, 11342, 11347, 11676
- Language Development**
10519, 10562, 11348, 11539, 11623, 11729, 11746
- Language/Foreign**
10180, 10192, 10820, 11494, 11676, 11699, 11714, 11783
- Latent Learning** (SEE Learning)
- Laterality**
10036, 10057, 10094, 10254, 10265, 10284, 10354, 10369, 10417, 10584, 11359, 11361, 11542, 11547, 11665
- Latin America**
10686, 11379, 11675
- Law** (see also Government, Political Behavior)
10658, 10754, 10963, 10974, 11118, 11160, 11296, 11414, 11787
- Leadership** (see also Management)
10609, 10730, 10740, 10753, 10763, 10771, 10782, 10794, 10803, 10862, 11311, 11461, 11561, 11574, 11610, 11616, 11630, 11787, 11825, 11840, 11843, 11873
- Learning** (see also next headings, Association, Conditioning, School Learning, Rat/Learning in, Monkey/Learning in, Cat/Learning in, Childhood/Learning in)
10072, 10107, 10109, 10110, 10112, 10114, 10116, 10120, 10121, 10147, 10150, 10151, 10152, 10153, 10156, 10158, 10180, 10217, 10220, 10221, 10223, 10226, 10453, 10454, 10512, 10636, 10965, 11514, 11635, 11640, 11713, 11790
- Learning Disorders**
11502, 11530, 11537, 11538, 11540, 11543, 11546, 11548, 11549, 11550, 11551
- Learning Model** (SEE Model)
- Learning Set** (SEE Set, Expectation)
- Learning Theory**
10119, 10141, 10547
- Learning Transfer**
10108, 10121, 10142, 10143, 10210, 10213, 10214, 10276, 10454, 10545, 10551, 10553, 10560, 11731, 11763, 11790, 11879
- Learning/Avoidance** (see also Rat/Avoidance & Avoidance Learning in)
10111, 10128, 10310, 10389, 10425, 10454, 10469, 11002
- Learning/Discrimination** (see also Discrimination Reversal, Rat/Discrimination in)
10113, 10116, 10155, 10268, 10297, 10365, 10463, 10464, 10465, 10466, 10534, 10543, 10545, 10546, 10553
- Learning/Escape** (SEE Escape)
- Learning/Incidental** (SEE Learning)
- Learning/Instrumental** (SEE Conditioning/Operant Rat/Conditioning in)
- Learning/Maze** (see also Rat/Maze Learning in)
10552
- Learning/Motor**
10096, 10099, 11210, 11653, 11683
- Learning/Over** (SEE Learning)
- Learning/Partner Associate**

Pupil Size (SEE Eye)
Q-Sort (SEE Test/Personality, Personality Measurement)
Questionnaire (see also Inventory, Scale, Survey)
 10891, 10894, 10956, 11027, 11153, 11207, 11221, 11488, 11780, 11842
Rabbit
 10263, 10404
Race (SEE Ethnology)
Race Relations (SEE Integration, Social Movements)
Radiation
 10267, 10422, 10427, 10428
Radio (SEE Communication/Mass)
Ranking (SEE Measurement, Scale, Scaling)
Rapid Eye Movement (see also Dream & Dreaming, Sleep)
 9963, 10063, 10064, 10301, 10313, 10334, 10341, 10362, 10387, 10518, 11060, 11284
Rat (see also next headings)
 10259, 10324, 10348, 10432, 10438, 10439, 10505
Rat/Activity in
 10261, 10287, 10349, 10361, 10407, 10426, 10472, 10498
Rat/Avoidance & Avoidance Learning in
 10295, 10339, 10399, 10407, 10425, 10459, 10468, 10470, 10471, 10479, 10487
Rat/Brain Stimulation in
 10282, 10283, 10284, 10286, 10287, 10288, 10294, 10295, 10296, 10299, 10303, 10304, 10333
Rat/Conditioning in
 10271, 10284, 10293, 10304, 10339, 10361, 10399, 10427, 10441, 10447, 10451, 10455, 10456, 10457, 10458, 10459, 10462, 10471, 10475, 10476, 10484, 10486, 10493
Rat/Deprivation in
 10279, 10283, 10296, 10363, 10433, 10439, 10447, 10475, 10481
Rat/Discrimination in
 10277, 10339, 10467, 10468, 10477, 10478, 10486, 10489, 10491
Rat/Drug Effects in
 10266, 10286, 10287, 10299, 10370, 10371, 10388, 10391, 10393, 10395, 10396, 10399, 10400, 10401, 10402, 10403, 10406, 10407, 10409, 10410, 10411, 10412, 10413, 10414, 10415, 10426
Rat/Extinction in
 10284, 10477, 10486, 10489, 10491, 10492, 10493, 10504
Rat/Learning in
 10261, 10277, 10299, 10349, 10365, 10366, 10369, 10422, 10433, 10458, 10473, 10474, 10477, 10478, 10487, 10496
Rat/Lesions in
 10262, 10264, 10266, 10267, 10270, 10271, 10272, 10273, 10277, 10278, 10279, 10281, 10359
Rat/Maze Learning in
 10259, 10288, 10303, 10503
Rat/Motivation in
 10273, 10451, 10452, 10457, 10472, 10479, 10492, 10504
Rat/Reinforcement & Reinforcement Schedule in
 10267, 10271, 10294, 10299, 10303, 10304, 10447, 10452, 10455, 10456, 10457, 10458, 10462, 10468, 10473, 10474, 10475, 10476, 10477, 10478, 10479, 10484, 10486, 10487, 10491, 10492, 10493
Rat/Shock & Shock Effects in
 10264, 10282, 10293, 10399, 10425, 10441, 10456, 10472, 10487, 10489
Rat/Stress Effects in
 10267, 10293, 10396, 10422, 10427, 10442, 10496, 10504

Rating (see also Rating Scale)

10899, 10980, 11620, 11789, 11826, 11835, 11856, 11864

Rating Scale

10782, 11436, 11469, 11496

Reaction Time

10062, 10102, 10103, 10104, 10105, 10106, 10162, 10212, 10234, 10241, 10317, 10765, 11241, 11251, 11253, 11369, 11395, 11397

Readability (SEE Display, Writing)**Reading**

10150, 10327, 10584, 10824, 11326, 11344, 11445, 11492, 11509, 11521, 11529, 11546, 11551, 11641, 11648, 11654, 11655, 11656, 11668, 11669, 11670, 11689, 11715, 11746, 11764, 11765, 11868

Reading Deficiency (see also Education/Special-Remedial)

11354, 11539, 11541, 11542, 11547, 11548, 11549, 11550, 11552, 11665

Reasoning (SEE Logic, Thinking, Cognition, Categorical Behavior)**Recall** (see also Memory, Recognition, Retention)

10046, 10096, 10114, 10117, 10157, 10158, 10161, 10165, 10166, 10167, 10168, 10172, 10177, 10178, 10179, 10180, 10184, 10185, 10199, 10200, 10318, 10536, 10538, 10541, 10620, 10727, 11105, 11329, 11596, 11652

Recognition (see also Memory, Recall, Retention)

10003, 10017, 10042, 10062, 10085, 10137, 10139, 10159, 10161, 10173, 10174, 10201, 10202, 11393, 11655, 11811

Recreation

10641

Redundancy (SEE Information Theory)

Reflex (see also Conditioned Response, Response, Muscle)
 10026, 10851, 11355, 11543

Regression (SEE Personality, Behavior Problems, Statistics)**Rehabilitation** (see also Counseling, Rehabilitation/Vocational, Education/Special-Remedial)

10846, 10989, 10993, 11023, 11118, 11180, 11195, 11236, 11306, 11320, 11418, 11430, 11437, 11532

Rehabilitation/Vocational (see also Mental Retardation/Vocational Rehabilitation & Training in)
 11295, 11297**Reinforcement** (see also next headings, Rat/Reinforcement & Reinforcement Schedule in)

9987, 10130, 10132, 10141, 10149, 10151, 10154, 10155, 10216, 10234, 10435, 10461, 10502, 10571, 10636, 10737, 10744, 10839, 10861, 11342, 11367, 11470, 11556, 11558, 11576, 11642, 11679, 11682, 11744

Reinforcement Schedule

10069, 10084, 10144, 10145, 10149, 10150, 10152, 10153, 10230, 10239, 10480, 10482, 10483, 10485, 10488, 10490, 11297, 11338, 11362

Reinforcement Theory

10476

Reinforcement/Delayed (SEE Reinforcement Schedule)**Reinforcement/Partial** (SEE Reinforcement Schedule)**Reinforcement/Secondary** (SEE Reinforcement)**Reinforcement/Social**

10132, 10612, 10744, 11179, 11270, 11291, 11388, 11598, 11679

Relaxation (SEE Behavior Therapy, Muscle)**Reliability**

9933, 9957, 9961, 11092, 11454, 11495, 11512, 11833

Religion

9908, 10653, 10656, 10657, 10661, 10665, 10669, 10675, 10676, 10677, 10678, 10679, 10680, 10681, 10682, 10714, 10768, 10788, 10848, 10914, 11132, 11302, 11675

REM (SEE Rapid Eye Movement)**Reminiscence** (SEE Memory, Recall)**Remission** (SEE Mental Hospital & Hospitalization, Hospital & Hospitalization)**Repetition** (SEE Stimulation, Familiarity)**Replication** (SEE Contribution & Criticism)**Repression**

10071, 10072, 10785, 10859, 11221, 11587

Reptile (SEE Animals)**Research** (see also Experimentation)

9921, 9958, 10437, 10539, 10779, 10837, 11095, 11096, 11438, 11833, 11848, 11861

Research Methods

10322, 10424, 10547, 10607, 10908, 10917

Reserpine (SEE Tranquilizer)**Residential Treatment** (SEE Mental Hospital & Hospitalization, Hospital & Hospitalization, Institution & Institutionalization)**Respiration**

9963, 10000, 10420, 10429, 10500, 10513, 10942, 10952, 11047, 11808

Response (see also Conditioned Response, Conditioned Emotional Response)

9922, 9923, 9970, 10070, 10198, 10537, 10674, 11397, 11856, 11862

Response Latency (SEE Reaction Time)**Response Set** (SEE Set)**Response/Delayed** (SEE Response)**Retardate** (SEE Mental Retardation)**Retention** (see also Memory, Recall, Recognition)

10109, 10124, 10163, 10169, 10173, 10176, 10181, 11656, 11756, 11763, 11790

Retina (see also Eye)

9996, 9997, 10001, 10013, 10018, 10314, 10316, 10321

Retirement (SEE Adulthood, Occupation, Gerontology)**Retrieval** (SEE Information)**Reviews**

9918, 10248, 10250, 10367, 10434, 10448, 10453, 11021, 11032, 11058, 11438, 11833

Reward (see also Reinforcement)

10084, 10164, 10455, 10490, 10535, 10540, 10614, 10775, 10813, 10876, 11168

Rigidity (SEE Personality Trait, Authoritarianism)**Riot** (SEE Social Behavior/Human, Aggression, Social Movements)**Risk Taking**

9940, 10075, 10232, 10235, 10238, 10674, 10735, 10750, 10759, 10774, 10804

Risky Shift Phenomenon (SEE Group Dynamics, Risk Taking)**RNA** (SEE Biochemistry)**Role**

10728, 10926, 10941, 10957, 10987, 11072, 11185, 11310, 11406, 11484, 11603, 11613, 11618, 11619, 11824, 11825, 11839, 11845

Role Playing (SEE Role)**Rorschach Test** (see also Projective Technique)

10901

Rosenzweig Picture Frustration Study (SEE Projective Technique)**Rotary Pursuit** (SEE Visual Perception, Motor Performance)**Rotation** (SEE Somesthesia, Factor Analysis)**Running** (SEE Activity, Motor Performance)**Rural Environment** (see also Community, Urban & Suburban Environment)

10568, 10644, 10657, 10663, 10671, 10688, 10723, 10816, 11081, 11418, 11468, 11590, 11595, 11631, 11691

Russia (SEE USSR)**Sadism** (SEE Sexual Deviation)**Safety** (see also Driving)

11051, 11113, 11881, 11883

Salary (SEE Money, Socioeconomic Status)**Salivation** (SEE Conditioning/Classical, Gland, Taste)**Salt** (SEE Biochemistry, Food)**Satiation** (SEE Motivation)**Scale** (see also Attitude Measurement, Inventory, Rating Scale, Testing Methods)

9970, 10071, 10612, 10645, 10822, 10892, 10893, 11100, 11478, 11572, 11599

- Scaling (see also Measurement)
9917, 9976, 10052, 11306, 11807
- Scanning (SEE Detection)
- Schizophrenia (see also next headings)
10923, 11029, 11045, 11059, 11164, 11206,
11207, 11209, 11211, 11239, 11240, 11242,
11243, 11244, 11245, 11246, 11247, 11248,
11251, 11253, 11259, 11262, 11264, 11265,

- Vocational Interest** (SEE Occupational Interest)
- Vocational Rehabilitation** (SEE Rehabilitation)

BRIEF SUBJECT INDEX

tion/Vocational)
Voice (SEE Speech, Verbal Behavior, Vocalization)
Voting (SEE Political Behavior)

Wage (SEE Money)
WAIS (SEE Wechsler Adult Intelligence Scale)
War (see also International Relations)
 11158
Ward (SEE Hospital & Hospitalization)
Warmth (SEE Temperature)
Water & Water Intake
 10266, 10270, 10279, 10290, 10391, 10432, 10481, 10492, 11028
Weapon (SEE Military, War)

Weather (SEE Environment, Temperature)
Wechsler Adult Intelligence Scale (WAIS)
 11364, 11493
Wechsler Intelligence Scale for Children (WISC)
 11105, 11229, 11502, 11508, 11523, 11545
Wechsler-Bellevue Intelligence Scale (SEE Test/Intelligence)
Weight
 10055, 10273, 10278, 10436, 10863
Weightlessness (SEE Environment, Somesthesia)
Welfare (SEE Community Services)
Wife (SEE Marriage)
WISC (SEE Wechsler Intelligence Scale for Children)
Wit (SEE Emotion, Humor, Language, Literature)

Word (see also Association/Word, Language)
 10126, 10135, 10161, 10176, 10201, 10823, 10824, 10827, 10830, 11350
Work & Work Analysis (see also Occupation, Task)
 10423, 11401, 11406, 11805, 11806, 11807, 11808, 11809, 11810, 11811, 11813, 11814, 11816, 11819, 11822, 11829, 11835, 11844
Worker (SEE Personnel/Industrial)
Workshop/Sheltered (SEE Rehabilitation/Vocational)
Worm (SEE Animals)
Writing
 10584, 10809, 11282, 11315

X-Radiation (SEE Radiation)
